EDC_PXL: Crystal Padding: Unicode Ideogram. Edit: inspired by my original @EdC_PXL Unicode Character 'Paddington Bear' for the New Year. Computer Organization and Design, Fifth Edition - Chapter 11 and Chapter 12 Exercise Set 2. " We have decided to do Chapter 11 and Chapter 12 Exercise Set 2 for this course, and it is available online. This is an interactive programming activity, involving a menu for choosing actions and/or text as input to a program. [ad_1] Chapter 11 is using loops and arrays. A program will calculate the area of a rectangle and the length of its diagonal. We are going to use loops to iterate through the elements of the array variable. Exercise Set 2 Chapter 11 Exercise 11. " In this chapter, we are going to learn how to use loops to iterate through the elements of an array, or list. We will start our loop in the line 13. To do so, we need to write the 'for' keyword and an expression that the loop will iterate through. The expression in the loop will be the array 'nums' in line 13. Line 14 will introduce a counter, and it will be used to iterate through the elements of the array. Line 15 will store the elements in the loop in a temporary array. Line 16 will check whether the counter is greater than the length of the array. Line 17 will start the loop. Line 18 will terminate the loop if the counter is less than the length of the array. Line 19 will store the elements in the loop in the array 'temp' in line 17. Line 20 will calculate the sum of the elements in the array 'temp' in line 17. To do so, we will use the 'sum' function from the module 'math'. Line 21 will print the sum of the elements in the array 'temp' in line 19. Line 22 will print the counter. Line 23 will use a function from the module 'functions' to calculate the square root of the elements in the array 'temp' in line 20. Line 24 will print the square root of the elements in the array 'temp' in line 22. Line 25 will print the length of the array 'nums' in line 13. Exercise 1. " Read the given text, and use the statements from the exercise. After reading the text carefully, write the following code to the file test1. Write the same code as the 520fdb1ae7
