In 2020, the school year across the U.S. begins in an unprecedented, scattered way. Some public schools are not returning until October as districts wait to see how other areas are progressing and how the COVID-19 virus is progressing. Many people don't send their children back to school this year. Actually, here's a mom's story. But as strange as the start of the school year is, you have to admit that there is always something a little strange at the beginning of the academic year. Why is the start of the school year not in line with the calendar year – or the end, for that matter? How did the end of August/early September become the default time of year for the start of school? Well, the answer might surprise you. The school year actually dates back to a time when the farming schedule took precedence over everything else – yes, even the school. Agriculture can be done only in spring, summer and autumn. Families needed children to help, so their schooling took place in the colder months when nothing could be planted or harvested. So the children could help with cattle and other farm duties during the grueling season. Different districts organized the school year around community needs. For example, schools in areas with large autumn harvests would have free in September and October. Cities acted a little differently because they didn't rely on agriculture to make a living. They will go to school essentially throughout the year and take a few short breaks throughout. Their school years ranged from 251 to 260 days. The school was much different at the time – here's what it would have been like if you were in school 100 years ago. When education began to be more valuable in society, stricter rules needed to be put in place so that there was more uniformity in the school system. In 1852, Massachusetts became the first state to pass a mandatory public education law, making it mandatory for rural and urban areas to offer education. Parents who did not send their children are fined. Soon after, a compromise was reached between urban and rural school systems that would be launched at the same time of year, starting in the fall so that children could still help on the farm during the summer - and so the 180-day school year was created. So while most children spend the summer at the pool or play video games and do not feed the cows, they have an agricultural season to thank for their three months of fun in the warm weather. This year some school start dates have been changed, but look at these other things that you won't see in schools after the coronavirus. In addition, check out our comprehensive guide to back school in 2020.Yulia Naumenko/Getty ImagesKimberly Anderson/Courtesy Elizabeth Karsell Homeonurdongel/Getty Images Most years in the Gregorian calendar have 52 full weeks and one day. Leap years are 52 weeks and two additional days. Certain years in the Gregorian calendar, however, will have 53 stays numbered in a week. These are the years when January 1 falls on a Thursday or is a leap year that begins on Wednesday. Although such year shifts are commonly used in Asian and European countries, they are not so popular in the United States. Seven-day weekThey of all units of time of the year, only a seven-day week is an artificial time period. The day is based on a 24-hour night cycle, a moon in a lunar phase cycle and a year in the time it takes for Earth to complete its orbit around the sun. The week is unique in that it is not based on any astronomical phenomenon that forms a time unit. It is widely accepted that the seven-day week was adopted from the biblical record of creation where it took God six days to create the universe and then rested on the seventh day. This is reflected in the seven-day period for the ancient Israelites where they work six days and dedicate the seventh day to rest and worship God. Some theorize that the Israelites may have adopted a seven-day week from the earlier religious traditions of The Sumerians and Babylonians.Days of weeksMog historians agree that it was the Romans who firmly established the modern seven-day week, adding features from the seven-day weekly system of Babylonians. This is evidenced by some days of the week that are named after roman deities. These days, Sunday, which the Romans dedicated to the Sun God, Monday for the Moon God and Saturday for Saturn. The Romans had eight days a week as a civic practice until 321. The Anglo-Saxon influenceother roman deities inspired the name of other days of the week such as Mars Day (Tuesday), Mercury Day (Wednesday), Jupiter Day (Thursday) and Venus (Friday). Days of the week in other languages, especially those belonging to the romantic language, still have this impact. Names in English days of the week, however, apart from Saturday, Sunday and Monday, have An Anglo-Saxon origins. The names of the gods of Teutonic mythology were used for other working days. Tuesday was derived from Tiu, which is an Anglo-Saxon name for the Norse god of war Tyr. Wednesday was named after Woden, the Anglo-Saxon name for the Norse supreme god Odin, while Thursday was named after the god of thunder, Thor. Friday or Frigg's day was named after Frigg, Odin's wife. Does the week start on Sundays or Mondays? When Emperor Constantine established a seven-day week in 321. Calendars and weekly counting systems in the United States, Canada, Australia and New Zealand also start each week on Sunday. International ISO 8601 standard, which is the most common week counting system in the counting system the week begins on Monday and ends on Sunday. Using ISO 8601 will help alleviate confusion and suspicion in international correspondence between different week-long counting systems and time zones. On weekdays and weekendsMost Christhoovite devotes Sunday as a day for worship or rest. Islam, on the other hand, marks Friday as a day of rest. Judaism has long defined Saturday as a day of Sabbath and rest. Traditional calendars mark the weekend days as red to stand out from the rest of the working days, which are usually painted blue or grey. Prek – 8th \$19.95 A month, first student (\$14.95 per month for each additional student) 9th - 12th \$30.00 Per month, per student (includes 4 courses per student) Now is the time to start! Start + Stop + Pause anytime Sign up if you have school-age children, you've probably spent the last few weeks shopping with your kids for new clothes and buying times through your school's recommended list of recommended necessities. I wonder how much did you spend? I bought everything on my 8-year-old daughter's school list, and it cost more than \$100, not to mention new outfits, sneakers and a backpack. It's a price that not all families can afford, and with more children it can be a sizable cost. My family lives in a city where a huge immigrant population lives, and nearly 70 percent of public school students qualify for free or reduced-price lunch. There is so much need in my community that the public school system recently decided to provide all students with free breakfast and lunch every day. And speaking of need, let's talk about teachers. Most of them don't get enough financial support from their school supplies, which leaves them on the hook for hundreds of dollars out of their own pockets each year. (I saw this firsthand growing up, because my mother was a teacher and principal for decades. And when she was principal, she spent thousands of dollars of her own money instead of hundreds.) It was clear that our shopping list for back-to-school included not only supplies for our individual pupil, but also classroom accessories, such as boxes of handkerchiefs, printer paper packets and Clorox handkerchiefs. My family gladly sends those, as we can afford, and appreciate how much our teachers in public schools work for children. If you are able to help needy students in your local schools, there are many ways to do this, both large and small. Do you know how many students in need sit in your child's classroom? Shutterstock 1. Donate supplies. Pencils, erasers, notebooks, paint accessories - while you pick them up for your child, consider grabbing an extra piece of each if you can swing it. Send them with a message for the teacher so they can go to anyone who needs them. The same applies to classroom accessories such as paper towels or hand seduffias – The district usually shut down the call to them several times a year. 2. Donate clothes. Some schools maintain a small stash of clothing - a kind of thrift store - to provide clothes and shoes to students or families in need. Our local primary school does this and makes an invitation once a year for donations. This student-run clothing store in Stratham, New Hampshire, gives all the clothes free of charge and is open to all, regardless of the need, to take away the inconvenience some students might feel using such a store. Call your local public schools to ask about the declines in clothing donations near you. 3. Give to your local food banks. You can make donations of food, time, or money to food banks to help needy families in your community. Your local supermarket can make it easy with pre-packaged boxes that you can buy for about \$10 each and drop-off bins where you can leave non-stop items for food hoards. Around the holidays, many schools will operate their own food drives to benefit students and their families. Our school's announcement home to families makes a special plea for baby supplies - diapers, wipes, formula and baby food can be expensive, so they are often in high demand. We usually send a few bags of groceries, and we buy them separately in the store and keep the bill for a small tax deduction. 4. Volunteer. Whether you raise your hand to leave and read in classrooms on certain days or follow the trip, you'll see the children firsthand at the local school. I'll never forget spending one December morning in my daughter's first class, where the kids chatted excitedly about the upcoming holidays. I heard a boy say he didn't believe in Santa Claus because Santa always forgets to come to his house. Heartbroken, I later emailed the teacher to ask if there was a way to help, and she connected me to a school social worker who was able to offer some options. And of course, you might consider volunteering with organizations like Boys & Girls Clubs of America or Big Brothers Big Sisters of America, which also help children in need. 5. Adopt a student. Washington state is home to the Homes for Student and Student Adoption program, which aims to align financially challenged, at-risk and homeless students with donors who are interested in helping those disadvantaged students attend their institution and realize their academic dreams. The charity helps more than 58,000 homeless students across the country. 6. Donate to the washing machine. Such a generous move would definitely go above and beyond. But here's the thing: One in five students in the U.S. has trouble finding the clean clothes they'll wear to school, according to a survey of 600 teachers conducted by appliance company Whirlpool. Many parents have to laundry room or friend's house, which can be inconvenient with the family schedule, and if the money is money Maybe they won't buy soap. With that in mind, Whirlpool has donated 17 pairs of washers and dryers to schools in St. Louis and Fairfield, California. Children with problems with presence were able to bring their own laundry to be cleaned while in class. The results, according to Fox Business: More than 90 percent of students had increased attendance, and especially at-risk youth reported fewer absences, nearly two additional weeks at school. On average, the school had about 50 loads per pupil, and 95 percent of students had more motivation in the class.
