If your kids are like mine, they might be obsessed with. Why not hug and discuss how our body spends food. Get these digestive system worksheets here. Because who doesn't care about the human body? It's bloody, squishy, and rude, the kids will love it. There are so many activities and experiments that can be completed to go along with them as well. We eat food and drinking water on a daily basis, the first system we jump into is the digestive system. This, of course, can leave a lot of jokes about the exit point of food, but I'll leave it up to you about how you'd like to proceed with it. We laugh and joke and children are particularly interested in learning about where it is stored. Who would know? Ha! These digestive system worksheets for kids will get you across the road that food does through your body. My only thing is that the pictures are not quite accurate as the small intestines look very short when in fact we know they are very long and accumulate there, except that these prints are a great way to teach their children about their digestive system. Check out the rest of the human body worksheets for kids here. Visual learning is just so much fun to do. While I love sitting back and ready for and with kids, I really enjoy being able to use these worksheets as a way for them to focus on what we say as well. And from how well they engage with them, I think they appreciate visual learning as well. Not only do you see the human body and label it from parts, but then sit down and talk about it as well. I think a big part of learning is also making sure that communication is there too. There have been so many times that we have worked through a worksheet or a pack of worksheets and then talked about the topic at hand and how it relates to our daily lives. This is a learning worksheet paired with practical learning, too! Recommended Human Body Books Use one of the amazing human body books to explore the human body in color. See how each system works together. Read the books together and then talk about what you read. You can easily use the information on the site to dig deeper into the topics. My Amazing Body Machine: A Colorful Visual Guide to How Your Body WorksThe Fantastic Body: What Makes You Tick & How You Get SickThe Magic School Bus Presents: The Human Body: A Nonfiction Companion to the Original Magic School Bus SeriesHuman Body! (Knowledge Encyclopedia) Inside Out Human Body: Explore the world's most amazing machine-you! Amazing Pop-up Human Body: Amazing pop-up skeleton and pull-out site! There are color images for tagging and then line pictures for coloring inches They also come in both sexes so you can choose to use a female or male. I know my kids identify with their own sex, so they'd rather have it. Instead, you can use books to help you figure out where the digestive system organs are located as well. \*\* Graphics from clip art teacher! What does the digestive system do? The digestive system is responsible for smashing food to keep its energy and turn it into energy that the body can use. Think of the digestive system as one long tube. It goes into your mouth and then the waste products come out the other end. Mouth Digestion of food begins in the mouth. Our mouths begin to water or fill with saliva to moisten the food we chew. Food is divided into smaller pieces by our teeth. Esophageal Food travels from the mouth to the stomach of the esophagus. Stomach In the stomach, food is further edging according to the acid in our stomach. Our stomachs actually have 3 parts: heart, fundus and pyloric. Small intestines Small intestines are the longest part of the digestive tract. Here, the food is chemically lysed so that nutrients can be extracted into the bloodstream to be carried where they are needed. Large intestines Large intestines receive waste materials and remove water to turn food waste into feces. Rectum Once the water is removed, feces are deposited in the rectum until it can be expelled from the body. From the time you need to eat food and for it to travel through your body to come out as waste, it takes 24 hours. Recommended human body kits find out where organs lie in your body with these hands-on models of the human body that your children can explore.
