Cachemira fibra pdf

Cashmere is one of the rarest and most special wool in the world and, in turn, one of the most valuable. It is soft to the touch, silky, light and a good heat insulator. Cashmere wool comes from the innermost layer of goat hair, which was originally only found in isolated local populations of the Tibetan Mountains, on the southern slope of the Himalayas and in China's Xinjiang Uygur region, mountainous areas with temperatures below zero. The English translation below if you click Keep reading This inner layer of hair is separated from the outer, protective and thicker, during spring molting only after manual styling and sorting work. In order to make one sweater, it takes more than two goats. Add to this its low global production level (approximately 6,500 metric tons of pure cashmere per year, rather than 2 million tons of sheep wool), we can understand its relatively high price compared to other fibers, and that is why using it is a model of class, luxury and difference. Its name comes from the region of northern India. Cashmere has been manufactured in Mongolia, Nepal and Kashmir for thousands of years to make fabulous shawls and shawls. This fiber is also known as pashmina (Persian wool). Stories say that in the fourteenth century Ali Hamadani arrived in the Ladakh Region along with 700 ingers and artisans from Persia, discovering the region's goats and its soft wool. Legend has it that he took the wool and knitted the socks he gave to the King of Kashmir. The Sultan loved the quality and allowed Hamadani to start the industry of weaving shawls using this wool. The shawl were introduced to Europe when the commander-in-chief of the French campaign in Egypt (1799-1802) sent one to Paris. The arrival of the headscarf is said to have been an immediate success and began to be produced in France. Crude oil trading between Asia and Europe began through the French company Valerie Audresset SA, located in Louvier, being the first European company to enter the fiber optic market. Years later, The Scottish textile manufacturer Joseph Dawson discovered Indian pashmins and began importing material to his factory in Scotland. Dawson sold these headscarves to British high-end women who valued the fabric for its softness and warmth. High-quality cashmere clothing can be up to eight times hotter than sheep's wool, despite its light weight. The texture, color and length of the fibers affect their production and price. Whiter cashmere fibers require less dye, minimizing the damage that coloring causes to their natural softness, making them more appreciated. Teh tambi'n depends on de la regi'n la que se recoge la lana. En Mongolia Interior, por ejemplo, los inviernos son duros y las cabras tienen una meta más pobre, estas producen el pelo más fino que se aprecia en las prendas de la más alta calidad. En los Altos Andes, China es el mayor proveedor de materia prima necesaria para hacer lana de cachemira, pero Europa es quien domina los métodos de hilado y fabricación, y ha acaparado el mercado de productos de primera calidad. Una de las marcas en la estada ferida febril bowi maravillosos de cashmere es Burberry. Esta temporada ha presentado una nueva sección en su web Scarf Bar. Trade in commercial quantities of raw materials between Asia and Europe began with Valerie Audresset SA, a French company based in Louvier, being the first European company to commercially spin cashmere. Years later, Scottish textile manufacturer Joseph Dawson discovered Indian pashmina and began importing material to his factory in Scotland. Dawson sells these headscarves to British high school women who have praised the fabric for its softness and warmth. A piece of high-quality cashmere can be up to eight times warmer than sheep's wool, despite its light weight. The texture, color and length of the fiber affect its production and price. The more white cashmere fibers require less dye, minimizing the damage that causes the color of its natural softness, and they are most appreciated. The quality also depends on the region in which the wool is collected. In Inner Mongolia, for example, winters are harsh, and goats have poorer nutrition. They produce the best hair, perfect for the highest quality clothing. China has become the largest producer of cashmere raw materials, but Europe is the one that controls spinning and production methods, and it has cornered the market on high-quality products.
