Source: Bose Best Wired and Wireless Outdoor Speakers Android Central 2020 Turn your backyard into a sound garden with a new set of outdoor speakers. Whether you want a system in the country, a wired set, or a Bluetooth wireless speaker that you can take anywhere, we've got you covered. Our favorite is the Bose Free Space 51, but they're not the only speakers that make the cut. Read on to find out which wired and wireless outdoor speakers we've rated best this year. Source: Bose Audiophiles no need to pose Bose. The company has been announcing state-of-the-art sound systems since 1964. The Bose Free Space 51s are pairs of green speakers that blend in with their environment. Bury them in the bushes or place them next to the pool. The flexible design fits anywhere and delivers the award-rich sound Bose is renowned for. Bose Free Space 51 loudspeakers are resistant to crazy temperature fluctuations. Bose guarantees that they remain powered in temps that range from -22 degrees to 140 degrees Fahrenheit. Bose promises that this set of speakers is weatherproof, so you can leave them outside. They are also easy to install. This kit can be installed in the country or above the ground. The grooves on the underside of the speaker base allow you to tuck in and hide the wires, giving you a professional look. Now let's talk about sound. Bose gives you 360 degrees of audio coverage. The tones are deep and rich, never tinny. The grille knocked over the speakers reflects the ups and downs and spreads them to a wide area. Whether you're by the pool, sitting on the terrace or enjoying a picnic lunch at the table, you'll be treated to sounds that will move you. Yes, they are expensive, but if you are looking for speakers with the best sound around, they are worth every penny. Resisting the insane temperature extremes of 360-degree Killer Sound Blend with Rugged Environment Easy to install Expensive wired speakers more difficult to install our favorite permanent outdoor speaker Bose Free Space 51s are wired speakers that install quickly and have the best ups and downs of any model on the market. Source: Anker If you're not interested in plugging in speakers and want to lighten the load on your budget, Anker Soundcore Boost is the way to go. It's hard to call it a value speaker (although it's one of the cheapest options around) because it's such a robust system. Anker Soundcore Boost pairs nicely with phones via Bluetooth or NFC. The combination of dual controllers and double subwoofers provides 20W of excellent sounds. The tones are balanced and clear and can be amplified by extra bass so you can pound away to keep your heart content. The battery life will sing for a full 12 hours, so it can handle you all day if needed. Build quality is solid on Anker Soundcore Boost. The design is minimal but tasteful and the case has an IPX5 rating that is durable enough to last rain or spillage, even if it is not waterproof. With this setting, you get an Anker speaker, a Micro-USB charging cable, and an 18-month warranty. It's an investment that's stupid to miss. Increase bass with Superb tap sound 12-hour battery life Excellent NFC build quality + Bluetooth Waterproof, not waterproof Old-school Micro-USB charging Small size, big on sound You get 12 hours of battery life and excellent sound in this portable Bluetooth speaker. It's a bargain at all costs. Polk Audio Atrium 6s are waterproof and work in all seasons. They're durable enough to withstand high and low temperatures, and Polk ensures they can see you through heavy rains. Aluminum grilles and brackets, plus stainless steel and brass hardware never rust, stain, or lose their shine. And the sound? Thanks to the overhead design, the speakers offer wide coverage that fills large open spaces without lacking rhythms. This system from Polk Audio is an excellent choice for those who want a solid outdoor audio system. The only downside: these don't have Bluetooth baked in you'll need to hardwire this setting. To add Bluetooth, you'll need to add a Bluetooth receiver. If you can live with that, these sound every bit as good as the more expensive deals. Installation is a breeze Can be mounted vertically or horizontally Materials never rust Excellent sound Waterproof Perfect outdoor solid audio system If you want a solid system, run with Polk Audio. The sound is excellent and the mounting options are fantastic. Source: Olafus Olafus Outdoor Bluetooth speakers are simply fun. They look like standard backyard lanterns, but also draw on decent sound. Use one by one, pair the set together for a full stereo, or connect multiple lamps and really dial the melody. Unique to Olafus, built-in LEDs. These speakers serve as garden lamps or mood lighting. They can cycle through eight colors and even synchronize with the rhythm of the music. Lanterns hang with a simple hook or sit directly on any flat surface. Easy-to-push controls line the front speakers and are easy to use. This speaker set has an IPX5 rating, making them water resistant to most spills and even light rain. There is one downside: Even if you take 10 hours off batteries while playing music and using LEDs, it takes more than three hours to recharge each lantern. On the plus side, the speakers will come with a power adapter so you can keep going on, if you don't mind tethering to the socket. All told, these are Sounding speakers that are waterproof and have an extra bonus to provide cool lighting options. 10-hour battery life Built-in Bluetooth Connect LEDs multiple speakers together Optional power adapter Long charging time Only IPX5 with rating Add some mood lighting These speakers from Olafus do a double job. You get color-changing LED lanterns and two speakers with a battery life of 10 hours. Source: JBL JBL Xtreme 2 ranks consistently at the top of our list of favorite Bluetooth speakers. IPX7 waterproofing means that you can not only take this speaker to the pool, but you can completely immerse it without worry. The whole unit is perfect for a rough and tumble lifestyle. With the shoulder strap attached, JBL is a joy to wear to the backyard, beach or throw in the back seat of a car. Xtreme 2 has an impressive range. The basses are clear without being strong, and the centers and heights are always present. If you have other JBL models, they can connect to Xtreme 2 with other speakers through the Connect Plus app, JBLs for free. Nice touch for those who want to expand the sound range. On this note, the Xtreme 2 is not as loud when using the battery as it is when connected. If you really want to turn it on, you're going to want to stay plugged. For those who want to go portable and need a hard-as-nails speaker, Xtreme 2 is the winner. The battery lasts and lasts! You will be treated to 15 hours of continuous Bluetooth playback, which is exceptional for all speakers these days. If you're in the market for a speaker that can take on Mother Nature and cranks out your playlist for hours on end, you want the JBL Xtreme 2. 15 hours of playing waterproof Built robust sturdy shoulder strap Stellar sound Volume not so loud on the battery Throw it over your shoulder and go JBL Xtreme 2 can go anywhere. It's portable, powerful, and has 15 hours of battery life. Long gone are the days of wearing short-cord boomboxes and even shorter battery life. Today's speakers can be as portable as you like, or wired into an existing sound system with little effort needed from your side. The speakers I rank best are the Bose Free Space 51. Like all Bose hardware, they sound out-of-this-world awesome. You get 360-degree audio no matter where you sit. The bass is deep and thundering and the treble is tight and never thin or tinny. The unique radial design dispels sound in a way that delivers the rich tones that Bose has built its reputation for. And Mother Nature doesn't apply to Bose Free Space 51. Designed to withstand extreme changes in temperature, snow, salt, rain and lightning, Bose speakers can sit without hiccups all year round. If you want robust wired speakers that deliver the best sound, put your money on Bose. Teach more. Skip to the main contentAD looks at the stunning crop of new modern homes they bring out in August 31, 2014Set in the picturesque hills of Rio de Janeiro's Praia de São Conrado district, this stone and cumaru-wooden aerie - designed by Brazilian firm Studio Arthur Casas - frames spectacular views across the infinity pool to the beach and the Atlantic Ocean behind it. Glass sliding walls on each of the three units of the house open to outdoor spaces on both sides of the residence, including the green rear courtyard shown here. The view from the front of the three-level residence reveals its elegant shape, a collection of stacked straightforward volumes. In the forests of Aurora, Oregon, about 30 minutes south of Portland, the upstart New York City firm No Architecture invented this poured-concrete home-called Courtyard House-for multigenerational families. Spaces in the center of the house in the open-air courtyard and each flexibly designed for living and sleeping. Corbusian-clean lines and deftly deployed concrete characterize the aptly named Cube House of Brazilian architectural firm Studio MK27. Located in a leafy area of São Paulo, the residence's massive main volume seems to rest on two incredibly thin columns; A substantial plate at the back of the house visually keeps the box afloat. Metal panels open around the perimeter of the ground floor into a lush garden and swimming pool. Windows on the upper floors shine lanterns at night. Los Angeles-based Dan Brunn Architecture crafted this three-story gem in Venice's urban neighborhood for art-loving clients. Dubbed the Flip-Flop House for the mysterious swivel walls that adorn the façade on the top floor of the apartment (and as a nod to its place on the beach), the home is a combination of sliding window walls and slabs of poured concrete covered with white plaster. The bedroom in flip flop house opens onto a wide outdoor terrace overlooking the beach and ocean. Johannesburg-based GASS Architecture Studios has built this house (known as Hillside) in a South African wine country for a family of five, creating a lush stone-and-wood retreat that opens onto rolling vineyards. The walls of the sliding glass capture the view of the planting and the surrounding range. Located in Ho Chi Minh City, Vietnam's largest metropolis, House for Trees - a two-bedroom house for a family of three - is designed in an effort to return much-needed greenery to a rapidly urbanizing area. Five bamboo-formed concrete pavilions topped by banyan trees (known for roots that grow above ground) distinguish this quirky complex, a prototype designed by local rising star firm Vo Trong Nghia Architects. Interiors features redbrick walls and floors either concrete or from local wood sources. Swedish firm Elding Oscarson created this simple Y-shaped volume and glass as a seasonal retreat in Molla, a city that became a popular holiday destination at the turn of the 20th century. The steel frame design, which is based on a young family of three, is lined with glass around the base and in the slats of the Douglas at the top. Spiral staircase and free-standing fireplace help break open interiors. Wide square windows on higher floors and glass walls on the lower floor frame views over the grounds to the sea while showcasing interiors.
