Every decision-maker, whether they work in law enforcement, government or the corporate sector, needs good information to decide on the best quality. This is why it will always have a team of researchers or analysts reporting relevant information at meetings before or before making an important decision. There are many questions that analysts can deliver intelligence briefings on. Their commonalities are that they should be up to date, contain high-quality information, and a briefing should be held in a brief, highly impacted presentation. The main briefing on security in the world is the President's Daily Briefing (PDB), prepared every morning by the CIA Intelligence Agency (DI). DI also produces the World Intelligence Survey (WIRe) for a very limited audience in the U.S. government. According to the CIA's website, the briefings focus on analyzing intelligence at the highest level aimed at key national security and presidential issues. They will cover unfolding events around the world and include DI's analysis of how events will affect U.S. security and foreign policy. Their format is diverse: most of the information will be in the text, but will also include multimedia elements, as well as graphics and multidimensional maps. The Director of the Federal Bureau of Investigation (FBI) receives a 20-minute morning briefing on all major terrorist and criminal threats to national security and public security every day. According to the FBI's website, the briefing was prepared by a senior FBI analyst the night before, and it will trawl through six top-secret FBI databases and intelligence reports from other security agencies such as the NSA. The key to writing a briefing is its consummation and intelligence quality. This briefing is crucial to the FBI's decisions for the day. Intelligence briefings are not always top secret. The UN Development Policy and Analysis Unit (DPAD) publishes a once-a-month briefing on the global economic situation and prospects. The briefing is for public distribution and can be downloaded in PDF format from your web page. Like all good reports, he tops the report with a four-point summary and breaks it down to 10 or 11 regional sections. Each section will contain short paragraphs about this month's great economic stories. They will consist of short sentences complete with stats of tables and graphs. Energy is the most important factor in global and national politics today, and it will be prominent in many economic briefings, so it's no surprise that there are intelligence briefings devoted to this topic exclusively. UK Energy Institute (EI) holds public briefings on energy industry. Recurring themes in energy briefings include efficient use of energy and increasingly like new environmental compliance with legislation, such as meeting CO2 emission targets. As always, the briefing format here is always short, two to four pages. There are many graphics to break up blocks of text, and important information is highlighted in colored side panels and panels. About the author currently working in Dublin, Michael Mageean began writing for Belfast-based Two Weeks magazine in 1998. He recently wrote for technology blog Verify Recruitment, newsletter and script radio show Verify, New Work Radio. In 2012, he was trained as a journalist at the London School of Journalism. He graduated from the University of Ulster. Business leaders must actively identify and execute on a digital roadmap so that their organizations do not come under digital crossfire. Augmented reality is going to rewrite the way we interact with everything and create new business models. How IT leaders can feel and respond to emerging trends such as AR... and prepare to accept the enterprise. Innovation is the lifeline of the company and creates a sustainable competitive advantage. In today's information economy, every company is a technology company and must have a strategy to become a digital enterprise. IT leaders... This set of key ingredients can help make your entire enterprise IT savvy and let technology leaders align with business strategists. Industrial IoT and big data converge to provide smart supply chains focused on demand. Advances in 3D printing and additive manufacturing, combined with the efficiency of the supply chain, can make distributed production ... The right Industrial Internet of Things platform is one of the key tools to make IT and OT convergence a reality. Predictive and prescriptive data science-driven analysis can transform connected vehicles to improve safety and mobility, provide new infotainment options, and provide a cleaner environment. Knowing your organizational DNA can help maximise corporate value by properly aligning YOUR IT and business. The practitioner's view of the emerging role of data scientists and the true potential of big data analytics in solving non-trivial business challenges. There are many business models that lend themselves to the monetization of the Internet of Things (IoT) and the convergence of big data. A critical factor in success is creating a context sensitive, real-world action alert. With the excitement around the Internet of Things (IoT), it's hard to separate hype from reality. IoT is more about disruptive new business models than technology. Load More August 31, 2019 4 min read Opinions Expressed by Entrepreneur Contributors their own. The fourth industrial revolution in which we live today has disrupted virtually every industry around the world. Its ripple effect was widely felt in our daily lives all the way to the global economy, and in too. For many professionals, work no longer means 9 to 6, commute to the office, or even a designated desk. The technology has allowed companies to offer remote and flexible working conditions, including freelance. If you have agility and experience in the right areas, freelance work offers a variety of opportunities, sharing your knowledge and skills with clients. Freelance.com, a web subcontracting company for freelance professionals, in its recently published report for the second quarter of 2019, Fast 50, emphasizes that jobs associated with machine learning (ML) and artificial intelligence (AI) have shown a surge in demand and will continue to grow. The report estimated more than 433,000 jobs posted on the site to analyze the latest labour market trends and identify the skills that have seen the greatest demand movement. The jobs portal, which connects freelancers with clients, claims to have more than 34 million people from 247 countries. According to Freelancer CEO (dot)com, Matt Barry, there is a huge demand for any skills associated with AI and ML, and is constantly growing. The second big trend is that large companies are moving towards a more flexible, more compact workforce that meets their immediate needs. This is evident in the number of administrative skills in this quarter's Fast 50, a statement of the company cited by Barrie. In Pic: Top Freelancing Jobs in the second quarter of 2019 The report further highlighted the top 10 jobs that have shot up the scale this year, namely, customer service, input, accounting, academic writing, data processing, responsive native, statistical analysis, machine learning, Spanish training, algorithm and virtual assistant. She also added skills related to statistics and mathematics, along with engineering as the leading trending jobs. Overall, there is a heavy technology focus in this quarter of Fast 50, the report said. Here's a narrative of trending jobs at Freelancer (dot)com in the second quarter of 2019. 1/ Customer Service Customer Service was the big winner in this quarter's Fast 50 report, with demand for skills growing 54.78 percent in the second quarter of 2019 (from 1,913 to 2961). Appealing to freelancers for customer service allows companies to provide 24/7 support, with freelance customer service agents working across time zones and international boundaries. 2/ Copy Type Skills saw demand grow by 50 percent in the second quarter of 2019 (from 4,744 to 7116). Copy Typists specialize in transferring handwritten notes to an edited format. Precision and speed are key skills for copying a typist. 3/ Accounting This administrative skill increased by 49.19 percent in the second quarter of 2019 (from 1,047 to 1,562). Portal Claims that organizations see value in focusing their efforts on high-value tasks by turning to distributed workforce to perform administrative tasks. 4/ Academic letter According to freelancer (dot)com, the academic letter is the first first on this quarter's Fast 50. Demand for such skills increased by 42.28 percent in the second quarter of 2019 (from 2,117 to 3,012). 5/ Data Processing This skill saw a 38.65 percent surge in demand (from 10896 to 15107). Data processing involves collecting data and converting it to useful information. This task is usually carried out by data scientists, and is a vital step in the creation of machine learning and artificial intelligence applications. 6/ Reaction Native According to the research firm, Statista, the mobile application market is set to grow to 258.2 billion by 2022. React Native is a platform developed by Facebook to develop native mobile apps for Android or iOS. Indigenous language response skills increased by 37.95 per cent in the first quarter of 2019 (from 1,162 to 1,603). 8/ AI machine learning is used for such diverse tasks as identifying suicide risk for financial forecasting, writing car commercials, etc. According to Freelancer (dot)com, jobs involving ML saw a 36.66 percent increase in demand (from 2,144 to 2930). Engineers in artificial intelligence and machine learning are becoming one of the most sought-after talents in the world. Elon Musk of Tesla said during the World Conference on Artificial Intelligence in Shanghai that AI will make jobs meaningless over time. I would recommend studying engineering because it's into this kind of thing, or working on something where people can just interact with other people, he said. According to a 2017 report by research firm MarketsAndMarkets, the AI market in 2017 was estimated at \$16.06 billion and is expected to reach \$190.61 billion by 2025, at 36.62% during the forecast period.
