in india free download how to install airmon? vicky_: i have installed the driver by myself and the device name also changed after installation of driver. but it is still showing empty and unknown it is not detecting windows still detects and connect vicky_: have you restarted the network interfaces? yes it is showing this kind of error it is not detecting at all the wireless usb adapter is not detecting can some one help me plz is there any solution for this issue need to recover my data from this computer vicky_: that looks like it is working fine. Have you enabled the wireless interface in /etc/network/interfaces? vicky_: what does ifconfig show? i tried this site: by following the instruction vicky_: so you should be fine. I'm not too sure why that guide is different. i didn't find any link to install the driver by myself i had to install the driver by following the website vicky_: OK. Good luck. i want my data back because some one i know is waiting to see my data data i have on this computer vicky_: it's not going to be easy to get it back. You need to have an external backup i know this but i will try my best 520fdb1ae7
