To help you find accurate information about the U.S. history subject test you're looking for, here's a table of contents so you can easily to the Section You Want: Format of American History Subject Test Types Questions about American History Subject Test Concepts Tested on U.S. History Test Where to Find Practice Questions and Tests How to Study for American History Subject Test-Taking Tips When To Take American History Subject Test What Is the Format of American History Subject Test? Like all tests in fact, SAT US History is 60 minutes. Within that hour, he asks you 90 multiple-choice questions. Clearly, you will need to develop your skills in answering questions quickly and efficiently! There are five answers to the question, and the questions generally fall into the three main types. What are the types of questions on the test? The three main types of questions on SAT US History are Recall Questions, Analysis Questions, and Use of Data Questions. Questions about impeachment recall issues are relatively simple. They test your knowledge of specific facts, concepts, and concepts. The following is a typical example of the impeachment issue: One of the purposes of the Marshall Plan of 1948 was A) to rebuild European economies to make communism less attractive. B) help depressed farms of Latin American nations. C) aid to communist nations that would agree to embrace democracy. D) give military assistance to these nations that resist communist subversion. E) help the peoples of Asia establish heavy industries. This question does not ask you to analyze or use data - you either have knowledge of the Marshall Plan of 1948 or you are out of luck (although you might use the year, 1948, to make an educated assumption). The correct answer is A) to rebuild European economies. Analysis questions also require your knowledge of the time period, important figures, or significant events, but go a step further by asking you to apply that knowledge to analyze or interpret the information presented, such as a quote, map, chart, or cartoon. For example, the following question provides a quote from the 1840s and asks you what idea it expresses, rather than simply requesting a description of the idea itself. Had the Creator separated Texas from the Union by mountain barriers, the Alps or the Andes, there could have been compelling objections; but he planned the entire [Mississippi] valley including Texas, and bit every atom of soil and every drop of water of a powerful whole. He connected their rivers to the great Mississippi, and marked and seeded the whole for the authority of one government, the residence of one nation. This quote from the 1840s can be viewed as expression A) New Nationalism B) popular sovereignty C) Manifest Destiny D) The policy of the good neighbor E) border thesis You can see how this question requires you to interpret the quote and put it in the context of a historical trend. The correct answer for this (wildly outdated) quote is C) Fate. Using data questions The third type of question asks you to link the given data to the history or to evaluate it. Data can be anything from charts to charts to images, like this famous image: Rosie the Riveter, of course, refers to A) women's contribution to the defense industry. Answering these questions about recall, analysis, and SAT history data in the U.S. calls for the following skills. Expected skills on SAT US History These expected skills go along with three types of questions. There are historical concepts, enjoyable relationships, geography and other data you need to understand major historical achievements Historical analysis concepts The ability to use knowledge to interpret data in maps, charts, charts, and cartoons You can probably see how these skills will be applied to recall, analyze, and use data questions. Now that you're familiar with the types of questions you'll see and the skills you need to answer them, what about the content on the test? How much American history do you need to know? What covers the U.S. history test? America's test of the subject of history ranges over several hundred years, from pre-Cambrian history through the American Revolution to the Industrial Revolution to the present day. Most of the focus is on the years after 1790, although there is a small part that has to do with earlier history. The exam includes political, economic, social and cultural history, as well as foreign policy. Political and social history is emphasized more than others. The course provides the following breakdown of material and temporal periods: Political history 31–35% Economic history 13-17% Social history 20-24% Intellectual and cultural history 13–17% Foreign Policy 13-17% Period % test pre-Cambrian history up to 1789 20% 1790 to 1898 40% 1899 to the current 40% of American historical subjects Test Prep Materials Now that you are familiar with the content and format of the test, let's talk about where you can find high-quality questions about the practice. Next, we will discuss the best ways to study effectively and strategies for test success. Test Prep Books Official practice questions are always the gold standard when it comes to books for SAT test preparations, so you can immediately look up to the College Board. Their book includes two pre-applied full-length practice tests, along with detailed explanations of the answer. While this book is a good review, it's definitely no substitute for staying focused throughout U.S. history class. You will need a solid foundation of historical knowledge to use this book effectively. Books that offer a more detailed overview of American history are Barron's and the Princeton Review. Barron's has three full-length tests and a diagnostic test at the beginning to assess your starting point. Its 40 chapters are divided by historical age. Two flaws about Barron: so much information that you may be studying unnecessary facts and figures, and many students say his questions are unnecessarily complex. Since you probably don't have a ton of time to prepare your subject test, you want to make sure you get the best results from your study time. The Princeton Review also gives a solid comprehensive overview, along with two extensive U.S. history tests in the book and additional online. It's a good resource in conjunction with your history class — just keep an eye out for any questions that seem outdated. Starting with official practice issues can help you develop your eye for it. Kaplan is the second option, but it's not your best resource. Many questions are simply too simple, so you will probably get an unrealistic idea of your score from using practice tests. I would recommend kaplan at least for genuine preparation for the American history test. Finally, if you're taking AP US History around the same time as the US History SAT, you might want to check Out No Bull Review: For Use with the AP US History Exam and SAT Subject Test. Keep in mind that this book is not specific to sat test subjects, but it offers you strategies to combine test preparation, along with an overview of the history that will appear on both tests. In short, if you're studying with books, first look at the College Board, then barron's and/or the Princeton Review. Kaplan is no help. For those of you who also take AP US History, No Bull Review can be a good extra resource. What about questions about online practice? Online practice questions again, your first go-to should be the College Board. There are 29 official questions here about the practice and explanations of the answers. It also gives you some more questions about the practice and general advice in this PDF, although you will need to correct them yourself and achieve them yourself. This site, 4tests.com, has 34 decent questions to practice. They are a good, quick review that you can do and see them automatically achieved. Another page with a lot of questions about online practice can be found here. It also has some useful PDF downloads with key glossary concepts and general guides for studying reviews. Finally, you can check out the questions of American historical practice in Varsity Tutors which consists of several diagnostic tests for the American history subject test. Here are some study techniques to help you be truly ready for the US History SAT. #1: Keep Up in Class SAT US History covers a huge period of time. This requires knowledge that spans several hundred years, and that knowledge takes time to learn, a whole year or more of studying American history in class. Teaching is key to a strong basis of knowledge, as well as the skills of data analysis and interpretation to be invoked in the test in question. One way to stay responsible would be to get an SAT US History test prep book at the beginning of the year and use it for review as you go through the course. In this way, you can strengthen the information and ensure that you can recall or apply it when answering questions about the practice of the test in question. A gradual review throughout the year will be very helpful, and then you can do some more focused study a few months before the test, and really step up your learning two to three weeks before. #2: Befriend test practice tests are the best way to prepare. They not only help you stay sharp and able to recall content and apply your skills, but also help you develop time and pace management. Remember, the test asks 90 questions in just 60 minutes! Subject tests do not change the great offer year after year, so any questions about the practice you can find will be useful in some way (bearing in mind the recommendations I made above). There is a huge difference between passive study and active testing. Taking practice tests will put your knowledge into practice, as well as help you assess your progress and identify which areas you need to focus on more. #3: Score Your Practice Tests Be sure to achieve your tests and understand the explanations of the answer. If you make a mistake or don't know the question, you should write it down in a notebook so you can go back to it and fill in the gaps in your knowledge. Occasionally signing up year-round with SAT US History practice tests, you can evaluate your progress and see your improvement throughout the year. Then you can really turn it up in the weeks before the test. #4: Analyze your wrong answers To repeat the point, you don't want to just score a test and move on. This result is a signal for you and what you know and what you need to learn. You should understand why you missed the question. Was it lack of knowledge, misguided assumption or carelessness? If it's the first, you should brush up about your understanding. Take a look at that piece of history again and take notes about it. If others, work to improve the process of elimination skills. If you find yourself overly rationalizing or justifying the answer, it's probably a distator - there's only one 100% correct choice of answer. Understand what was distracting you and get to the heart of what the response choices communicate. Finally, if the error was due to carelessness, continuing to exercise will help you improve your ability to read and understand questions and respond quickly and efficiently. That's why timing yourself is such a good idea when taking exercise tests. Which brings me to my next proposal... #5: Simulating test conditions Practice tests will give you best real test simulate the test conditions you will encounter on the day of the test. Give yourself exactly 60 minutes, no more, no less, and sit in a quiet space with little distraction. After your studies, you want to make sure that you will be able to get to all the questions and answer them thoroughly in the hour that will be given to you. In addition to practice and class materials tests, are there other approaches you can take to learn material? #6: Become creative in your study history involves a ton of reading and taking notes. If you're feeling discouraged, you might want to try other approaches to make history a living and get involved in ways that you find interesting. Reading aloud or watching documentaries, like on the American Experience, could be a good way to complement your understanding throughout the year. Of course, this should not be your main focus in the weeks leading up to the test, but try to find creative ways that will interest you in the people, places and events of American history. Testing strategies for the American History Test beyond these study techniques, let's talk about some other important strategies you need to know to master the American history test. #1: For example, the chronological order of questions about the American history test are grouped into 8 to 12 questions that go in chronological order. When a new grouping starts, you'll see a sharp change in the time period. Understanding the time frame will help you understand the question, so pay attention to these groups to make sure your head is in the right age. #2: Use the elimination process American history SAT Test subject subtracts 1/4 point for each wrong answer, so you want to be strategic in how you answer questions. If you can eliminate even one answer as incorrect, then I would recommend that you make the best educated hit. Even if your mind clears after reading questions, you can generally apply your knowledge to remove the wrong answers. While designed to make everyone sound convincing, be careful and look for distractors or respond to choices that are irrelevant for the time period or content at hand. #3: Take the time to understand the question On a similar note, you want to make sure you really understand what the question raises. Look for keywords like EXCEPT OR NOT, as well as superlatives like best, worst, everything, none, always or never. As you get better at managing your time, you'll be able to quickly get to the root of the question and its accompanying choices of answers. Finally, now that you know where to find the practice materials, how to use them and these testing strategies, when exactly should you work out the American history subject test? When to take the AMERICAN History Test Sat US History Test is offered in August, October, November, December, May and June, and the College Board recommends you have on one year of prep US History class before taking the exam. If you are taking AP US History, then you should be well prepared for year-end testing and you can combine your learning for both the AP test and the SAT. However, you can definitely do well even if you have not taken ap. It's best to take the test at the end of the school year. Remember, you cannot take the tests in place on the same day as the SAT, but you can take up to three tests on one test date. My recommendation for American history would be a June test date. You can read more about other considerations about when to take the SAT of the test in which and the full list of test dates here. By keeping up in class, identifying and filling in knowledge gaps and preparing with questions about practice, you will be well prepared to win the American History Test. What is a good result for sat test subjects? Actually, it depends on the subject test. Want to learn more about the specific themes of American history?
