

Carebidet

Diaper-less Diaper Care

What is Carebidet Care?

Life changing, life saving, dignified care.

The Carebidet is an innovative automatic toileting system that is **life changing** for both the individual being cared for and the family or professional caregivers that are caring for them.

Built-in sensors detect waste, flush, rinse and air-dry ensuring comfort and cleanliness for the individual. Comfortable, cost-effective and easy-to-use, the Carebidet decreases the burden on family and caregivers, healthcare costs, CO2, waste, paper diapers, odor, worries, stress, and delays.

Smart care / Smart life for Bedridden People

Get rid of paper adult briefs (diapers), bedpans, and odor...forever.

Get back more time or reduce professional caregiver costs, by reducing the time involved in monitoring and changing diapers, or being called to do a bedpan care, including cleaning the mess and changing the sheets.

Once the Carebidet removes the solid or liquid waste, male or female, and the area cleaned and air dried, the chances of the individual contracting an infection (e.g.

Urinary Tract Infection (UTI)) as well as pressure sores (legions) are greatly diminished, and avoiding these is **life saving**.

Because of the built-in HEPA filter, UV light, and water filter, any odor that is normally associated with adult brief (diaper) care or bed pan care is significantly reduced.

Improving Hygiene and Human Dignity

Once it is placed onto the individual, the Carebidet provides physical comfort and more **dignified care**. When urine and/or feces is detected, the Carebidet automatically flushes, rinses and air-dries. This of course, helps maintain emotional stability as it makes the patient feel clean and fresh and upholds human dignity as it helps patients not to be ashamed or embarrassed.

Improving personal hygiene for the patient is critically important for keeping them comfortable and avoiding potential infections. Carebidet helps reduce fungal infections, or any lesions or sores on the skin through prompt excrement disposal and the wash/air-dry feature. This helps prevent bladder infections and/or urinary tract infection often caused by use of paper diapers. It can also help relieve constipation and fecal incontinence.

Comfort and safety

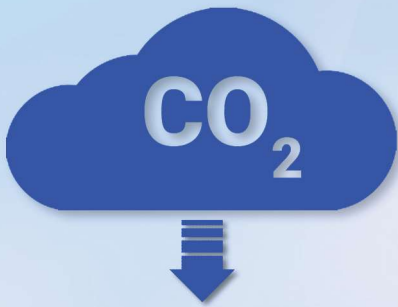

Providing more comfort for a night's sleep is an immediate benefit. While doing so, the Carebidet prevents possible falls while getting up and trying to go to the bathroom at night (this is the source of the most common patient injuries).

- Reduced waste and odor from adult briefs
- Savings: Consumables, cleaning supplies, Laundry and professional care
- 80% reduction in time on toilet / diapers care
- More time for real quality family time
- Increased dignity from not having to ask or having to change diaper

- Potential reduction in contracted urinary tract infections (UTIs), pressure wounds, falls/injury
- Improved outcomes by better and more dignified care

A positive environmental impact

In addition, the Carebidet is an ecologically responsible choice as it means less amounts of disposable paper adult briefs (diapers), less CO2 emissions from industrial waste, contributing to reducing the negative affect of this volume of waste disposal on our environment.

Life changing, life saving, dignified care.

It is easy to understand how to use the Carebidet by viewing a few short videos. [Have a look](#) for yourself.
