Carrots sticks and sermons policy instruments and their evaluation pdf

The literature on political strategies, tools and styles is impressive. However, a complex range of theoretical and conceptual approaches and analytical tools makes it difficult to review well. Carrots, sticks and sermons offer such frameworks for this area and clearly show how public policy tools are classified, packaged and selected, while emphasizing the role evaluation plays in the tool selection process. Carrots, sticks and sermons offer a comprehensive analysis of the categories and typologies of policy tools. It classifies sticks, carrots and sermons - or, more specifically, regulation, economic means and information. Readers are offered a comparative perspective on the practice of evaluation in foreign contexts. Particular attention is paid to the examples of Sweden, the Netherlands, Belgium, England, Canada, the United States and the Republic of Korea. Thus, this volume crosses the language barriers that stand in the way of the dispersal of research among the international community of theorists and practitioners. As States become more interdependent, the challenges of implementing and assessing political choices will become more and more serious. Carrots, sticks and sermons provide insight into the traditional and current practice of evaluating policies and programs in different contexts. The theory of comparative public policy in the book will give insight and guidance in developing clearer policies. It will be of great interest to those in public policy, particularly policy-making, policy implementation, policy evaluation, comparative policy and economics. The literature on political strategies, tools and styles is impressive. However, a complex range of theoretical and conceptual approaches and analytical tools makes it difficult to review well. The theory of comparative public policy in the book will give insight and guidance in developing clearer policies. It will be of great interest to those in public policy, particularly policy-making, policy implementation, policy evaluation, comparative policy and economics. Abstract This article explains how after 43 years of unsatisfactory results, the Ministry of Education of Peru (MoE) suddenly took the first place in the table of government indicators. To this, the study relies on implementation and major discussion of policy theories in order to provide a comprehensive explanation of the underlying improvements underlying the improvement of the ME. Methodologically, this study uses a paradigm of mixed research methods. It combines process tracking and regression analysis. The analysis shows that the MoE has experienced three major events on its road to policy success. First, the approval of a long-term policy plan (National Education Plan 2021); secondly, the controversial legitimization of public policy towards the teachers' union of Peru and its Defeat; and, thirdly, the recent dislaelation of historically disparate control functions in the MoE. Teh Teh point out that, once these reforms are implemented, ME bureaucrats can gain the legitimacy of teachers and ultimately achieve complementarity in political instruments. In fact, multiple regression analyses show a positive and significant correlation between the set of tools used by MoE staff: the voluntary contribution of parents to schools (sermon), economic incentives to outperform schools (carrots) and trimester supervision of school performance (sticks). The results also show that ME tools are positively associated with satisfactory student learning outcomes. Keywords: Tools of Policy, Implementation, Peru, Education, Mixed Methods Abbreviations: MOE: Ministry of Education peru, COMUNED: Community Education Councils, MECCEP: Peruvian Quality Education Program, DRE: Regional Direction of Education, UGEL: Local Education Management Units, APAFA: Association of Parents of Students, SINEACE: National Education Assessment System, Accreditation and Certification of Educational Excellence, : National Institute of Statistics Peru, CNE : National Education Council, CPM: Magisterial Public Career, PEN: National Educational Plan , SUTEP: Peru's unique syndicate of education workers Literature on political strategies, tools and styles is impressive.
