Gifs have quickly become one of the most popular ways for people to express themselves. This is because it takes less time to view than the video, but it is also more expressive than the photo. You can find them in all social media and the internet in general. Some of them are pretty fantastic as well. If you've ever thought about creating a GIF yourself, you have two options. First, it's a camera app that turns a short piece of video into a GIF. Another gif is the creator of a tool that will help you make them out of other things. We will explore both of them because they are the best GIF app maker on Android. If you find the process of creating too tedious or annoying, you can always travel Giphy for some really good GIFs! Pixel StudioPixtica CameraPowerDirectorRoughAnimatorTumblrBacon CameraPrice: Free /1.99Bacon Camera is a decent enough camera app. It has a range of features, including full manual focus, white balance, compensation exposure, and exposure time along with a semi-hand ISO. There are also some more sophisticated tools to make your shots look in the right direction. However, for the purposes of this list, we will be talking mainly about supporting THE GIF. You just open the mode, target the camera and shoot a short video. The app then converts it into a GIF for you. It's relatively easy to use, and most of the Google Play Store complaints about compatibility rather than functionality. Camera MXPrice: Free /Up to \$1.99Camera MX is one of several GIF creator apps that are also camera apps. You can record short jerk videos or lots of photos. The app can turn it all into GIFs for you. It's not great for creating random ones, say, a video on YouTube. However, it's a good way to shoot some yourself. It's also halfway a decent camera app of its own. The GIF goes past Live Shot in the app. It should work to create a basic GIF. GIF Maker and EditorPrice: Free/\$2.99GIF Maker is one of the creator's most popular GIF apps. You can cut and crop videos in your gallery to create GIFs. You can also add stickers, text, or edit existing GIFs. GIFs should work on most websites after that. You have to come up with the material to make a GIF yourself. Otherwise, this one is very good. He has mistakes, however. There is also a learning curve you will have to get a handle. Gif Me Camera and GIF MakerPrice: Free/\$1.49Gif Me Camera is a camera app specifically for GIF solutions. It captures up to 14 seconds of video. Then edit it with color filters, stickers, text, and other things. He also stop-movement, time span and other types of shots. There is support for video GIF conversion for those who video lay around. The free version has advertising. It also adds a watermark to the GIF. The pro version removes both of these things. Giphy CamPrice: FreeGiphy Cam is one of the new GIF creator apps. It's also from Gifi, Gifi, undisputed champions of the GIF format. The camera records a short segment of the video. You can change this video with tons of filters, special effects, stickers, text and more. It also has five blast mode shots along with its video mode. This is probably the best HYBRID/camera hybrid app. It doesn't have any camera features, but it makes GIFs better than others by a fairly large margin. It's completely free without in-app purchases. Pixel StudioPrice: Free/\$2.49Pixel Studio is an animation app for pixel art lovers. You can draw your own little creations with pixel art. It also comes with a text tool, supporting things like the Samsung S-Pen, and it's auto-saves so you don't lose your job. You can also export your creations to GIFs, making Pixel Studio one of the best apps for custom GIFs. It's basically an art app so meme lords may need to put in a bit more effort than usual, but the results are usually worth it. Pixtica CameraPrice: Free /Up to \$6.99Pixtica Camera here for the same reasons as bacon camera and MX camera. This is a good enough camera app with direct GIF support. This one comes with an assortment of manual controls, panorama mode, lapse and hyperlapse mode, slow motion, and some other neat stuff. However, along with his GIF recorder, there is also a meme editor. The app allows you to edit meme templates to create your own. This makes Pixtica a really good one-two combo to create a meme. PowerDirectorPrice: Free/Up to \$5.99PowerDirector is one of many video editing apps with GIF support. This one just happens to be better than most others. This is an app for video editor. So it will have a similar function. However, two of the export formats include GIF-still images and animated GIFs. This will certainly work better for turning the video into a shorter GIF. The app is free to download and play with. You may have to purchase additional features through in-app purchases. RoughAnimatorPrice: \$4.99 RoughAnimator is a drawing app where you can do an animation. It has different brushes and effects, but it basically goes out of your way so you can create your own stuff. You can view playback as you go to see how things turn out, and even import audio if you want for more complex things. You can export in a video or GIF format, which is why this app is on this list. The Pixel Studio above is a decent place for simple pixel art, but you can paint basically whatever you want with that. Us like that it has one cost without any in-app purchases or ads. TumblrPrice: FreeBelieve or not, Tumblr has the process of creating a GIF in its official app. This allows you to add stickers, text and other settings if you want. It works just like GroupMe's functionality does. Of course, this is on top of the normal feature of the app, which is to share and read things from other Tumblr users. It's This. tool for those who already use Tumblr. However, those who shouldn't probably try one of the other apps on this list. As usual, the Tumblr app is free without in-app purchases. The downside is that adult-oriented NSFW content and content are now banned in the app. You will need to find a new GIF creator if you want to do something naughty. If we missed any of the best GIF apps for Android, tell us about them in the comments! You can also click here to check out our latest Android app and game lists! Many people these days have switched to some kind of music streaming service like Pandora, Spotify, Google Play Music, or Apple Music. However, there are those of us on the left who hang on to our media collection because streaming isn't quite good enough yet. If you have your own music collection and a stock music player doesn't do it for you, then here are our picks for the best music player apps on Android! Of course, if you need apps that stream music, we have a list for that here! Those with LG V-series smartphones should probably use Poweramp, LG Stock Music Player, or UAPP. They just work better with the LG V-Series amplifier/DAC combination. Finally, here's our list of recommendations for music players on Android Auto! AIMPBlackPlayer EXJetAudio HDMediaMonkeyMusicoletNeutron PlayerPhonographPlayerPropowerSarBonus: USB Audio Player ProRead Next: The best free music download sites on the Internet that are legalAIMPPrice: FreeAIMP is a pretty powerful mobile music app. It supports the most common types of music files, including props such as FLAC, MP3, MP4 and others. You'll also get plenty of customization options, themed and other fun things like this. The app has a simple user interface, and we had no problem getting around and listening to music. It keeps it simple with a decent material design interface. We also praised its outstanding equalizer, http live streaming, and volume normalization. It's definitely a step up from most major music player apps. There is also a desktop version in case you want to kill two birds using one app. BlackPlayer EXPrice: \$3.29BlackPlayer is a simple but elegant music player that puts very little between you and your music. It works on the tab structure and you can set up tabs to only use the ones you really want. On top of that, it has equalizer, widgets, scrobbling, ID3 tag editor, ad-free, theme, and support for the most used music files. This is an delightfully simple and fantastic option for fans of minimalism. Free version a bit dice with the paid version providing much more features. Fortunately, the pro version is not expensive. According to our July 2019 update, the free version of BlackPlayer seems to be missing from the action. We'll check back in a few months to see if it comes back.jetAudio HDPrice: Free/\$3.99 and \$2.99jetAudio it's a long time time Android users because it has enough features to be better than most, but still simple enough for everyone to use. This one features various audio enhancements that come as plugins, so you can customize your music experience a little more than usual. It also comes with an equalizer (complete with 32 presets), simple effects like bass pulse, tag editor, widgets, and even MIDI playback. Free and paid versions are almost identical. The paid version simply removes ads and adds themes. You can also use this for free if you subscribe to Google Play Pass.MediaMonkeyPrice: Free/\$2.49MediaMonkey is a bit of a dark horse in the music player app business. It has a ton of features, including organizational functions for things like audiobooks, podcasts, and the ability to sort songs by things like composer (instead of just being an artist). It also has basic things like an equalizer. What makes MediaMonkey a truly unique music player is the ability to sync a music library from computer to phone (and back) via Wi-Fi. It's a bit of a complicated setup, but it's almost a one-of-a-kind feature. Despite the learning curve, mobile and desktop versions are some of the best one-two combos, even if the desktop version is a bit pricey. MusicoletPrice: FreeMusicolet is an app for no-BS music players. It has many desirable features, including many that you don't often associate with a player's music apps. This includes a truly standalone experience, a lightweight user interface, and a small APK size. In addition, the app has several bursts (another rarity), equalizer, tag editor, support for embedded texts, widgets, browsing folders and more. His non-nonsense approach is refreshing. This is a great option for people who just want a music player who plays music without a ton of extra stuff. It is also completely free without any in-app purchases and, due to lack of internet access, without advertising. Neutron PlayerPrice: Free trial / \$5.99Neutron Music Player is another music app that is not as popular as it probably should be. It has a 32/64-bit audio rendering engine that (according to developers) is independent of Android. The idea is that it helps the music sound better. It also has many other features, including support for more unique file types (flak, MPC, etc.), a built-in equalizer, and a host of other audiophile-specific features. It's a bit expensive, and the user interface is definitely not the best on the list. However, everything else about it is good. PhonographPrice: Free/optional is one of the few good open source applications. It positions itself as simple. Easy and easy to use. In most cases, this is true. It has a classic, simple user interface Of Material Design. It is quick to move through as needed. You can also change the theme if you want, but the theme editor is not particularly Along with this, you'll get Last.fm, tag editor, playlist features, home screen widget

and some other navigation features. This is a very simple and great option for those who just want to listen to their music without anything getting in the way. This app is also available without in-app purchases with Google Play Pass. **PlayerPro Music Player** Price: Free/\$4.99 **PlayerPro Music Player** is another lesser known music app that should be getting a little more traffic. It has a good interface that makes everything easy to use along with skins that you can download and install for more customization. You'll also get support for video playback, rare ten-team equalizer, Android Auto and Chromecast support, various sound effects, widgets, and some fun little features such as the ability to shake the phone to get it to change tracks. It even supports Hi-Fi music (up to 32-bit, 384 kHz). You can demo the app for free before forking out \$4.99. **Poweramp Music Player** Price: Free/\$3.99 **Poweramp** has long been one of the go-to music player apps of choice for many Android users. It has a sleek interface with themes that you can download from the Google Play Store. The interface can be too smart for its own good sometimes. Otherwise fast, efficient and powerful and themes are available if you want to this route. The app also includes a variety of playback features, including gapless playback, crossfade, and it has support for multiple types of playlists along with Android Auto support. You'll also find widgets, tag editing and other settings. This is a powerful player who seems to strike the right chord with almost everyone. **Pulsar Music Player** Price: Free/\$1.99 **Pulsar** is definitely one of the best music player apps available right now. Features include beautifully made Material Design, Tag Editing, Gapless Playback, Smart Playlists, Sleep Timer, and Last.fm scrobbling. **Pulsar** also has Chromecast support and some of the best Android Auto Support we've seen of any app on the list. It's not as feature heavy as some of the paid options, but that doesn't necessarily mean it's bad. This is a great option for those looking for something minimal, light, and good view. The pro version is inexpensive and only adds a few more features. Neither the free version nor the premium version has advertising. Bonus: **USB Audio Player Pro** Price: \$7.99 **USB Audio Player Pro** is the king of its own niche. It works great as an audio player for just about anyone. It comes with UPnP support, a bit of extras like gapless playback, a 10-band equalizer, and an attractive, functional user interface. However, where really sings for the audiophile crowd. The app supports up to 32-bit, 394kHz native audio with support for FLAC, MSA, DSD, SACD, and a ton of other audio codecs. In addition, it works specifically well with USB DACs as like HiRes DACs, like the one in LG phones. That's good because most other music players don't do it very well. You can even stream music (via TIDAL, zobuz and Shoutcast) through this app to use your hardware. It's a bit expensive, and those without special DACs definitely don't need anything like that, but it's better for those who use such equipment. If we missed any of the best music player apps for Android, tell us about them in the comments! This is an update to an earlier article, so check out the comments for some suggestions from our readers! You can also click here to check out our latest Android app and game lists! Lists!
