

Patients need affordable regenerative medicine (RM) solutions. Health foundations, academia, governments and companies join forces in the Dutch-Flemish public-private partnership [RegMed XB](#) to bring these solutions to patients. The ingredients for success are excellent translational RM research, funding for promising idea's/companies and industrial infrastructure. For this infrastructure, [RegMed XB](#) was granted funding for a Pilot Factory for regenerative medicine by the National Growth Fund. In four regions in The Netherlands, [RegMed XB](#) partners will build the Pilot Factory. Each of the four regions will contribute to the Pilot Factory by setting up specific facilities for stemcell production, 3-D printing of tissues, biomaterials and larger scale production. With this infrastructure, [RegMed XB](#) wants to deliver on its promise: bringing affordable RM solution to patients.
