A prospective study was performed to evaluate the effect of the octapeptide of cholecystokinin (CCK-8) on blood glucose levels in patients with insulin-dependent diabetes mellitus (IDDM). In an open study, 16 patients with IDDM were treated with octreotide (50 micrograms sc. 4 times daily) for 12 weeks. During the study, blood glucose levels, insulin requirements, body weight and metabolic and hormonal parameters were assessed every 2 weeks. In the last week of treatment, patients underwent an oral glucose tolerance test (OGTT). After 12 weeks of treatment, fasting blood glucose levels were reduced by 16 +/- 3 mg/dl (P and defense counsel testified that the contract did not apply to the property on Sixth Avenue. After reviewing all the evidence, it is our determination that a rational fact-finder could have found the essential elements of the crime beyond a reasonable doubt.
