We do not install any add-ons or any plurals on our devices. In fact, we sell our devices brand new. You can find firmware update files here on our support page, with the corresponding product. The OmniStick can be updated using the USB Burning Tool. The OmniStick comes with a MicroUSB power wire, which can also be used to update the device's firmware. To update the firmware, download the firmware IMG file in the USB Burning Tool and click Start, hold the recovery button on the OmniStick (the small hole up OmniStick has hidden a recovery button). While holding the recovery button, the OmniStick plugs into your computer. The update process will Automatically. Once completed, you can disconnect the stick and use it on your television with the new firmware. Firmware options for the OmniStick S8X are currently in development. Please check back later as we are made many different firmware options for this device. Complete the 2.2.1 manual firmware reflash on your G-Box Q2 using an SD card. You need G-box Q2 an empty SD card (formatted to FAT32 with at least 2 GB of memory and no more than 32 GB of memory) Computer with SD card lock Google Chrome browser (using Internet Explorer or safari to download these files can cause complications with this process) First started by downloading the firmware files. You can download the firmware by clicking each file individually. Instructions Once you have downloaded the two files above, you will copy and paste them to your empty SD card (there must be no other files on the SD card, and the zipped files must stay zipd). After you place the two files on your SD card, you'll start the toothpick method. Disconnect power from G-box Q. Insert SD card with firmware files in card slot on the side of your G-box Q2. Insert toothpick or similar object in recovery hole on the back of your G-box Q2, until you feel a click. Once you feel the click of the recovery button, keep it with toothpick while reconnecting the power to your G-box Q2. Insert SD card with firmware files in card slot on the side of your G-box Q2. Insert toothpick or similar object in recovery hole on the back of your G-box Q2, until you feel a click. Once you feel the click of the recovery button, keep it with toothpick while reconnecting the power to your G-box Q2. Hold the button for about 20-30 seconds or until you see your screen change. Select Apply Update of EXT, select the Update Zip file Select Reboot system now needed for this process: G-box Q an empty SD card (formatted to FAT32 with at least 2 GB of memory and not more than 32 GB of memory) Computer with SD card slot Google Chrome browser (using Internet Explorer or Safari to download these files, complications with this process) By clicking on the link below , you will download the latest G-Box starting Q2 firmware! Once you have downloaded, unzipped the folder and paste the 4 files on your empty SD card. \* Note: there should not be any other files on the SD card after you place the files on your SD card, you will start the toothpick method. Disconnect power from G-box Q2. Insert SD card with firmware files in card slot on the side of your G-box Q2. Insert toothpick or similar object in recovery hole on the back of your G-box Q2. Insert toothpick or similar object in recovery hole on the back of your G-box Q2, until you feel a click. Once you feel the click of the recovery button, keep it with toothpick while reconnecting the power to your G-box Q2. This process should take approximately 20-30 seconds to complete. The reset is done when your screen changes. Watch this video of the recovery process here, or if you have any questions, contact us. Use the G-Box built-in Internet browser to navigate the web. Download more than a million apps from the Google Shop off. The G-Box Q3 (Plus) can use all kinds of media such as movies, TV shows, TV shows, games, or use apps for productivity. The G-Box Q3 (Plus) supports wireless USB keyboard or mouse. You can download external content from your USB, SD card or external storage device to the G-Box Q3 (Plus) to install apps or other content. The G-Box Q3 (Plus) is compatible with our G-Pad BX/XYBA controllers via wired or Bluetooth connection. To use the Google Play Store, you must first configure your G-Box Q3 (Plus) to your Gmail account. Check the top right navigation tab, and click the Settings Once you enter the settings tab, scroll down all the way and select Add Account. Follow the instructions and provide your Gmail account. If you don't have one, make sure you create and register a new Gmail account. Any updates available for the G-Box Q3 (Plus) will be issued by what is known as an OTA Update. You will receive a notification prompting you to Review & Install when an update becomes available. Download the update within the OTA Updater app. Open your device's settings in the top right navigation tab and select Settings. Select System Reset. Select Factory Data, then select Restore phone or Recovery Tablet. To delete all data from your device's internal storage, select Delete All. Once your device is reset, select the option to be Restarted. Toothpick method instructions: Disconnect the AC power cord from the G-Box Q3 (Plus) but not from the power point. Use a toothpick or something similar, put it in the back of the Restore port until you hear a slight click sound. There is a hidden button in the Recover port and you should be able to feel the button depressed. While using a toothpick to depress the Recovery button, reconnect the AC power cord back into the G-Box Q3 (Plus). You must now be in Restore Mode. Within the G-Box Q3's (Plus) home screen, scroll down and select Settings. Select Add Accessories. Insert your device in Pairing Mode. Use your G-Box Q3 (Plus) remotely on your TV or monitor your G-Box Q3 (Plus) remote and select your device. Your G-Box Q3 (Plus) must be successfully paired. Open your device's Settings. Select Programs & Notifications. Then select the program you want to uninstall. If you don't see it, then select View All Programs or Program information. Select Uninstall. We recommend downloading ES file explorer from the Google Play Store. Skip this step if you already have ES file explorer. In ES File Explorer, do the following: To access data in your internal storage, select the m.m.e tab at the upper-left corner of the program. To access data in your external drive, select the External storage at the upper-left corner. It is usually located under Internal Storage. Depending on the entertainment providers, the existing subscriptions providers such as Netflix, Hulu, Sling TV, etc available on the Google Play Store. Please advise that we do not recommend or support any third-party streaming applications. Matricom does not provide information about downloading such software as it can damage or brick your device. Matricom does not sell programmed devices. The initial setup of your device must be done by the property owner. You'll lose all your data if you reset your device, and you need to reinstall all of your downloaded content. Yes and No, however, the original G-Box Q3 does not support 4K, but the new G-Box Q3 Plus does. Have you had any power outages or power outages in the area? If so, there is a high possibility that the device is affected by the incident. Please contact us directly at 786-686-5515 or email us at [email protected] for more information. The current version of Android installed on our device is 7.1.2. The species on both devices are similarly apart from the Q3 Plus's new caring and internal components. The G-Box Q3 Plus components are of higher quality and built to function more efficiently. Many of the errors experienced in previous models have been resolved and will not take place in our latest G-Box release. Powered by HTML5 Responsive FaQ Currently there is no firmware update for the Q3 available for download. If you flash the device, you do so at your own risk. You can find 3rd party firmware options online if you want to tinker with your Q3. The USB Burning Tool is used to flash the firmware on a Q3 device. Yes, the XYBA is compatible with our G-Box series. We would like to note that not all applications will map to the XYBA button layout accordingly. The XYBA is confirmed to work with Android devices, computers, Samsung VR headsets and PS3. Yes, you can connect your XYBA via Bluetooth and use it as a remote for your G-Box. You can only connect to one XYBA per G-Box device. Simply press the MATRICOM Button + X on the controller. The red light on the controls will begin to flash. To pair it with the G Road, go to your device's Bluetooth settings. Press and hold the Select + and X button on the controller to activate the mouse functions with the XYBA. To disable this feature, press and hold the Select + and X button again. There is a RESET button located on the back of the device. Use a toothpick-like object, press the button on the back of the controller. This must reset the connection and allow the controller to connect to your device. No, all computer connectivity will need to be established by a Bluetooth connection. Yes, our controllers will work with emulators. Special key mapping may however be necessary for the XYBA to spell properly. You will know it is fully loaded when battery light icon stops flashing and keeps illuminated. Yes, the XYBA will connect to Bluetooth 5.0 devices because this generation of Bluetooth Bluetooth compatible with the controller. While there is no guarantee, some games may need special key mapping, so that the controls can communicate properly. We suggest downloading an app called 'Octopus', which will then allow you to map the controller keys accordingly. Unfortunately, the most recent update on the Amazon Fire Stick (including older generations) has hindered the ability for our controls to become connected or stay connected. It's something beyond our control; we suggest that Amazon's support team gets more information on the topic. Powered by HTML5 Respond Questions Yes, and compatible with many other devices. Yes, the G-Pad BX is compatible with Samsung VR. Bluetooth available device, Q2, Q3 Yes, simply press Down + X on the controls and the red lights will start to flash. Tap your device bluetooth driver and pair it with the Gamepad. Simply press mode + Y on the controller to activate the mouse functions with the BX. To disable this feature, press Down + X. The G-Box MX2 was released in 2012 and has reached end of life support by Matricom. The MX2 is still a good device and there are many 3rd party firmware options available for it, despite it being more than 8 years old. Matricom no longer supports the MX2 product. We also do not have current or future MX2 firmware updates. Unfortunately, all MX2 products warranty are thin. Please log in or create a Matricom account to register your product. Product.
