.NET Framework, JNim, and Other Tools

The .NET Framework is a set of libraries that are used by other applications and programs to be run on Windows operating systems. JNim is a free, open source implementation of the .NET Framework. JNim is based on the Java .NET Framework and is cross-platform (runs on Windows, Mac, Linux, Solaris, and other Unix-like operating systems). JNim includes a .NET Framework implementation. It allows you to create .NET Framework applications with JNim. For example, it is possible to create an application with a .NET Framework implementation, and then convert it to JNim and run it. The following is a .NET Framework application with a .NET Framework im 520fdb1ae7
