Abandoned amusement park

In the 21st century, some theme parks and theme parks - Disney World, Six Flags - are multimillion-dollar titans. There is still room in the entertainment world for smaller start-ups, but you can learn from the big players. Visit them and smaller parks, and get an idea of what rides and attractions are popular. This will help you shape plans for your own park. Some parks rely on spectacular, terrifying roller coasters and exciting rides. Disney attractions are often tied to movies like Cars or Toy Story. You need to clearly define your concept in order to attract investors and market to the public. For example, you may have the largest water slide or rides with the wild western or pirate theme. Think about your audience as you develop the concept. You may want to target teens or focus on parents with young children, for example. Amusement parks are not cheap. A 2008 study from the University of Central Florida looked at decades of industry statistics and concluded startup costs were more than \$100 for each expected first year visitor. If you want a million first-year visitors, you should expect to spend \$100 million. Consider smaller, 50,000 visitors, say - and you still need \$5 million. You may need to spend 5 to 10 percent of the start-up size. A good feasibility study can go a long way towards showing the investors you are planning. The study analyzes the total acreage you need for your project, the size of the buildings and a mix of attractions and rides. This shows that your vision for the park meets the needs of the market and that the park will return a profit to investors. If your research shows that your first concept is unprofitable, you will need to come up with a new approach. Some research also goes into details about the design and layout of the park. Most theme parks require space. An old one covering 10 acres wouldn't be unusual. You should have a place where zoning or land use requirements will allow for a theme park. There should be enough parking space in addition to your rides. Roads and utilities should be able to cope with a steady flow of visitors. A park that spans several acres could trigger higher land use standards and development fees than, say, a four-story shopping mall. Amusement park is only an empty space until you fill it with rides and attractions. You can work with companies that will design custom riding for you or those who resell used amusement rides.
