PDF Creator and other PDF editing software gives users the flexibility to merge multiple PDF files into one or more file options. This helps users collect different documents while retaining individual items. During this process, the user also has the ability to edit a combined document. Why use the PDF file format How to combine PDF files Why the use of format PDFs are the ideal file format for several reasons. First, they allow you to fix the formatting of documents, so that all viewers of this document see it under the formatting that its creator intended. It is also quite difficult to change, making it very useful for preserving the author's rights and sharing confidential information. Finally, it allows for extensive compression without having to change the information or formatting it, making file sharing easier than ever. PDF Creator is a software that allows users to combine multiple files into one using a printer function. First, download the program. Then open all the PDF files you want to collect. For the first file, select the Print File, select the PDF Creator as a printer, and select Print. In the print dialogue field, select Wait. Open the second file and repeat the above steps, and then do the same for all files. The printed monitor will display a list of all the files that will be highlighted. Go to the menu of the document merger. All files must now be in the same document. Mac users are lucky when it comes to merging PDF documents in that this feature is already built into their systems. To do this, open the pdf documents you'd like to combine, and click the Menu icon button in the top left corner: Next, make sure there's no check mark next to the Thumbnails option: Now you have to see the list of pages in the document. Click on one of the pages and then click on the ⌘ team to select all the pages. (If you want to combine only certain pages, click on selected pages when you click on the ⌘ key.) Then drag the pages and put them on the list of pages of the document with which you would like to combine them. You have to see before you let go of the mouse to make sure that the files were, indeed, combined. Don't forget to save the document so that your changes are taken into account. There are many sites that exist to help you combine to combine PDF files online. Some of the most popular ones include PDF mergers and small PDFs. Image: © 123RF.com Online to rearrange the layout of a PDF document to print multiple pages per sheet (also called N-up print). It can be used to position two (2-up) or more pages of documents side by side on one sheet, for example, to print a booklet or to reduce the number of paper sheets needed to print a document. You can quickly join 2, 3, 4 or 6 pages in one, with multiple layout and orientation options. Available layouts: 1x2, 1x3, 1x4, 2x1, 2x2, 2x3, 2x4, 3x1, 3x2, 4x1, 4x2, 4x3, 4x4. PDF files have been designed as a versatile, easy-to-use document format, and they serve that purpose well. If you have a collection of images, say documents that you scanned in your computer, like JPEGs- you can combine them into a PDF document for easy sharing. Windows 10 now includes the ability to print in the PDF file in its native language in File Explorer. You can simply select a bunch of image files and print them out into the PDF file directly in File Explorer. If you're using Windows 10, start with the first section below. If you use Windows 7 or 8, the procedure is the same as in Windows 10, but you have to install a third-party tool to be able to perform the same task. We discuss this tool in the third section below. As you print out in the PDF file in Windows 10 To combine a group of images into a PDF file in Windows 10, you first need to make sure that your files are listed in File Explorer in order you want them to appear in the PDF file. You may have to rename them so they are sorted the way you want. If you have images in the right order, select them all and right click on them. Choose Print from the pop-up menu. Print Pictures dialog window is displayed. Choose Microsoft Print to PDF from the Printer list. If you don't see this option on the list, see the following section for information about its activation. Then continue the process from here. Use the right and left arrow button below the image to scroll through the images that will be added to the PDF file. Click on the Options link in the bottom right corner of the dialog window to access the additional PDF file options. NOTE: Images may look cut off, but don't worry. We'll show you how to fix it a little later in this article. In the Print Settings dialog field, you can sharpen the print images if you know that the PDF file will be printed. If you also know you will print a PDF file on your own printer most of the time, leave only to show the options that are compatible with my printer option chosen to get the best results. You can access the properties for the printer from here by clicking on the Printer Properties link. Microsoft Print to PDF Document Properties you can choose whether you want the document to be Landscape or Portrait from Orientation list drops. Click The Good button to accept the change or click cancel if you don't want to save the change or you haven't changed your orientation. NOTE: If you're using Windows 7, printer Properties opens up doPDF Properties dialog displays, allowing you to change the orientation of the page (as well as other settings). Again, click Good to accept your changes or click Cancel if you don't want to save the changes you made or you haven't made any changes. You return to the Print Pictures dialog window. If you've noticed earlier that the sides of your images seem to be cut off, click on the Fit picture to frame the checkbox so that there is no check mark in the box. You should see the whole image now. Turning the Fit image to frame affects all the images you add to the PDF file. Click the Print button to create a PDF file. Save the print output as the dialog window displays. Go to the place where you want to save the PDF file. The same catalog where the images are stored is chosen as the default location, but you can change that. Enter the name of the PDF file in the File Name editing field and click Save. You're done! The PDF file is created in your chosen folder, and you can open it in the default PDF view in Windows, or in any other PDF reader you've installed. How to activate Microsoft Print to PDF option in Windows 10 If the Microsoft Print to PDF option is not available on the list drop from the list of printers in the Print Pictures dialog field, you can easily add it. To install Microsoft Print on the PDF printer driver, open the Print Pictures dialog box, as we discussed in the previous section (if it's not already open). Then select Install the printer from the Printer list. Add the device the dialog box displays and the search for the devices begins. You don't have to wait until the search is over. Click on the Printer link that I want is not listed at the bottom of the dialog box. In the Add Printer dialog field, click Add a local printer or network printer with manual settings and click Next. NOTE: You can also access this dialog box by opening YOUR PC settings and tapping the devices to zgt; printers and scanners to add a printer or scanner. Then click on the printer link that I want, not the link that is displayed on this screen as Windows tries to search for the device. The Printers and Scanners screen also contains a list of all the printers and scanners available in your system, and you can install any one device by default and remove any of the devices. Then make sure you choose to use an existing port (this is the default). Select FILE: (Print in file) from the drop-off list to the right of this option and click Next. To select a PDF printer driver, select Microsoft on the list and then Microsoft Print To PDF on the right list. Click Next. You may already have a printer driver installed, in which case the next screen appears in the Add Printer dialog field asking which version of the driver you want to use. Make sure you select the Option To Use Driver, which is currently installed (recommended), which is the default, and click next. By default, the printer driver is called Microsoft Print To PDF. This name appears in the list falling out of the printer in the Print Pictures dialog box and anywhere else in Windows or programs where you choose the printer. However, you can change the name by typing a new one into the printer name editing field. Click Next. You should get a message about the successful addition of the printer driver. If you type on PDF files more often than you actually print on a printer, you can install this driver as the default printer. To do this, click the checkbox Set as the default printer so that the box has a check mark. Click Finish. You return to the Print Pictures dialog window, where the Microsoft Print To PDF printer driver has been added to the list to drop out of the printer and is automatically selected. You can now continue the process in the first section to create a PDF file from selected images. How to print in a PDF file in Windows 7 and 8 The procedure of creating a PDF file from multiple image files is the same in Windows 7 and 8 as in Windows 10 with one exception. If you click right on the group of selected image files and select Print from the pop-up menu to access the Print Pictures dialog box (as discussed in the first section above), you'll notice that there is no Microsoft Print To PDF option in the list to drop out of the printer. There are many PDF tools available that will add a PDF printer driver to Windows when installing the program, and these drivers will be available in the list of drop out printer. Here we show you how to install and use a tool called doPDF that will allow you to create a PDF file from multiple image files (among other useful features). Download the doPDF and install it. The next time you open a print Pictures dialog box, doPDF 8 (this is the version number at the time of publication of this article) is an option in the list of drop out printer. Choose this option. You can now follow the same steps in the first section above for Windows 10 until you click Print to create a PDF file. Once you do this after selecting doPDF 8 from the list of drop out printer, doPDF 8 - Save the PDF file dialog box displays. The default name and location of the file are automatically included in the file name editing field. To change this, click the View button. The Browse dialog window is displayed. Go to the place where you want to save the PDF file. Same Where are the images chosen as the default location, but you can change that. Enter the name of the PDF file in the File Name editing field and click Save. You return to doPDF 8 - Save the PDF file is a dialog box where you can choose the quality and size of the PDF file and insert fonts under PDF options. If you want to always use the folder you just chose to save the PDF files, click on the verification box Always use this folder to have a check mark in the box. To open the PDF file in the default PDF reading program on your computer, make sure that the Open PDF in the reader check-box is checked. Click the Good button to start creating the PDF file. The file is created and added to the specified folder, and it opens in the default PDF reader if you choose this option. DRIVERS of PDF printers can also be used to create a PDF file from any document that can be sent to a physical printer. Simply select the PDF driver as a device in the Print dialog field, rather than in a standard printer. Printer. how to print multiple pages into one pdf file
