When you cook and clean around the house, it gets pretty laborious and boring. How do I add a good taste? I used to download music, but now-a-day, Spotify and Pandora really fit the bill for music variety, while letting me take my downloads wisely, like watching TV, speakers that aren't great on my phone, but don't cut it. Even on my laptop, the speakers are not good for music, but what do you do? Get bluetooth wireless speakers natural Bluetooth Wireless Speaker Below are some of the features of this portable workhorse: features • Built-in 3.5mm audio ports for wired wireless connections or Bluetooth 4.0 • Passive subwoofer provides outstanding bass at all ends with strong strokes • Battery display on iOS devices such as iPhone, iPad, iPod • Play time: Up to 15 hours wired and 12 with Bluetooth connection • Charging time: 4-6 • Connection range: 15 hours wired and 123 •Battery feet: Rechargeable lithium-ion battery within 12 hours Unit weight: 22oz •Size: 7.5 x 3 x 3.5 What's inside? • Speakers themselves • Instruction manuals / user manuals • MicroUSB charging cables (no AC wall charger included) • 3.5mm audio cable, what do I think? This base is energetic for this little thing! I can hear music all over the house and the sound quality is phenomenal. I have just used this to connect via Bluetooth. So I don't know about aux connections, but I like that this is available for when others come and want to plug in their music without fuss over connecting their phone to my stereo. The settings are very simple, especially if you've used Bluetooth technology. You literally turn on the speaker and then scan bluetooth. On your phone or laptop and SB520 appears immediately and you connect to it and it works. The battery meter display is not available only with iOS and android platforms. I would have loved to be able to see the battery meter on my phone or laptop. Each has more than one function, but my brain simply doesn't have the ability to remember everything about each electronic device, and I would have liked to have only one button, so it's easier to use and easier to use. While the sound is absolutely fantastic for music, I find it not great for connecting to my laptop to watch movies or performances. A little sound, bass. If it's a word, but still better than my laptop speakers! You can buy yours at Amazon Disclosure: This free item is prepared for review purposes.
