Tcm fg15 forklift manual

TCM is a pioneer in the development and production of durable, extremely durable materials processing products. For more information, please find this. Copyright Mitsubishi Logisnext Co., Ltd. All rights reserved. Some TCM Loader Truck PDF brochures are above the page. The history of TCM Began in 1947. It was then that Mr. Noboru Niva decided to create a company that provides services for special equipment and special equipment called Niwa Maintenance Operation Co., Ltd. TC or Toyo Carrier Co., Ltd. In 1954, the company was named Toyo Umpanki Co., Ltd. After the rebranding process, the company continued its successful development. In 1956, a factory was established in Ryugasaki on the basis of the space for the production of Toun Industry Co., Ltd. 1957 was a key year for the company. The fact is that this year was concluded a cooperation agreement with Clark, which became famous around the world for the production of loading equipment. The following year, the first torque converter was produced in Japan. In 1958, the first TCM-branded loader was released. 1960 marked the release of the first front loader under the license of the American company Clark. In the fall of 1961, the company decided to place its securities on several leading stock exchanges in Japan: Osaka, Tokyo and Nago. Naturally, this could not attract the interest of large companies. As a result, in the spring of 1965, Hitachi Shipbuilding LLC, which specializes in ship construction, became a majority shareholder of TOuo Umpanki Co., Ltd. In April 1963, TCM was appointed the first foreign distributor in Australia, and two years later, after the merger of the company with Shiga Touo Umpanki Manufacturing Co., Ltd. in the city of Chokoji, the company was decided to launch an additional company, and the company was announced as a joint venture. Within two years (1968-1970) the plant was built and launched at full capacity in Shiga territory. This was due to the fact that the management decided to transfer orders from the company in Osaka to new capacity in the face of a sharp increase in demand. In the mid-1970s, the company became uncomfortable in Japan's limited market, and it began to develop external. TCM America (MIC) was founded in America in August 1976. It was a joint venture between TCM, Mitsui and Co., as well as its united company in the United States. In 1976-1986, the loaders were delivered to the territory of the Soviet Union, the total number of which amounted to about 7,000 units, and were intended mainly for use by industrial enterprises. November 1983 was happy for the company, as a large order was received from the Pentagon for 1000 units Trucks. In 1988, a large forklift factory was established with annual production of more than 6,000 units. Two years later, a large enterprise with a maximum capacity of 4,000 units per year was established in the city of Saventem, Belgium. 1992 was crowned with the TCM deserved award For the reliability and safety of products for a forklift that worked without a single breakdown for 7000 hours. 1999 marked the conclusion of a cooperation agreement with Hitachi Construction Machinery Co. and Furukawa Metal and Machinery Co., with the aim of co-producing front loaders. The company is now known as TCM Corporation. 2001 was a year in the history of the corporation, as this year the company was created under the name TCM Asia Distribution Co., Ltd. in South Asia, and two years later - TCM Forklift Trading Co., Ltd., which was engaged in the sale of TCM equipment in China. 2007 was marked by the decision to take over the management of CIM Industrial Machinery, Inc., as well as the newly created TCM Forklift Trucks, Inc., and in 2008 TCM (Anhui) was founded with the aim of manufacturing loading equipment in China. It is currently part of UNICARRIERS.
