Follow these assembly instructions carefully. If you experience any difficulty, please call a bowflex customer service representative and ask for help. 1-800-269-3539. Bowflex Power Parts Reference Guide Pro Step 1: Locate the rear foot and seat rail. 1a. Take two 3/8 x 3/4 square head bolts and place them through holes in bolt keeper's back leg. Take the band and drag it to the Seat Rail channel, starting at the end closest to the warning label. Make sure to align the end of the bolt holder with the end of the rail. Repeat for the other bolt holder. Once you have both bolt guards in place, install the rear foot - place four 3/8 washers and tighten a 3/8 nylon locknut onto each of the bolts. Please be careful when inserting the bolt holder. The edges can be sharp. 1b. Then take two 3/8 x 3/4 square head bolts and drag one on each side of the Seat Rail channel from the opposite end. Locate the rider bracket and connect it to the seat rail with the two square head bolts. Wait for the bolts to tighten with a wrench until after Step 1c. Now, locate the bolt holder for the rotation bracket and two 3/8 x 3/4 square head bolts. Place the bolts on the bolt holder. Drag them to the seat rail channel to make sure the holder is filled with the end of the seat rail. Repeat for the other bolt holder. Locate the rotation bracket and pulley frame. Snap the rotation bracket between the screw heads in the pulley frame. Place the rail so that the four bolts on the front of the rail slide through the four holes in the rotation bracket. Use 3/8 washers and 3/8 nylon lock nuts to secure the rail. IMPORTANT: Place the seat rail so that the end of the rail is the same as the edge of the rotation support. Connect the bottom of the rider arm to the upright platform with the 1 button. See example 1c.
