

What does it mean to be a "Student" member of OASA?

This paper itemises a list of additional rights, benefits, and privileges (along with the corresponding responsibilities, duties, and efforts) for this membership category. This paper supplements "What does it mean to be a member of OASA?"

Since "student" is a type of individual membership, all the benefits and rights of membership for an individual member would also apply.

Who would qualify as a Student?

Student members, or those over 18 years of age¹ who are pursuing a full-time college or university educational program of continual exploration, learning, and enquiries, represent the core constituency of OASA. Students are the recipients and the reasons why OASA exists. Many programs and activities at OASA are designed primarily for an audience of novice explorers in mind.²

Anyone wanting to understand the broader interconnected world that we all live in, to learn to treasure our planet Earth, which is our best Spaceship, and willing to work together in building and living with nature harmoniously through a sound understanding of STEM (Science, Technology, Engineering, and Math) should likely qualify.

We do not discriminate entry based on race, nationality, creed, politics, sex, religion, beliefs or colour. Conversely, we ask that all discussions be collegiate, apolitical, non-religious, and without hostility directed towards any one person or group. If expressing differences in opinion, do so professionally and respectfully. (Anyone not observing our Code of Conduct will have their membership status revoked.)

¹ Individual members over the age of 18 have the rights to vote and contribute to the governance of OASA. This is a responsibility and a privilege guaranteed by our M&A.

² Since we also support full-time life-long learners, those who are financially disadvantaged, such as retirees, allowance into this category can be made under exceptional circumstances with the expectations that the individual is contributing more than he is taking from OASA.

Special and Additional Benefits of Student Membership

OASA Student members are provided with these specially curated opportunities and challenges for the upcoming months:

- **Connect:** Connect into this growing space ecosystem by actively attending webinars and chatrooms, joining expeditions, participating in experiments, and visiting launch sites. As a student member, you may request and be connected with a global mentor. You will receive our newsletter and you may even contribute to this newsletter.
- **Command:** Establish, reinforce, and support an OASA university chapter at your university by being a cabinet member of the chapter. As a student member, you can consider establishing an OASA chapter at your school to initiate reaching out to corporates.
- **Contribute:** Join a Special Action Group (SAG) to explore fascinating questions for OASA. Provide user feedback on new services that can benefit humanity. Or join as volunteers and interns.
- **Create:** Co-create with students from other universities and build use cases that can be shared and help spark new businesses. Being able to sense new markets is much more important, and easier, than trying to seek solutions for new technologies.
- **Credit:** Earn OASA Space Pioneer credits. For a select few, about 1% of the general student population, you may want to apply for an internship or apprenticeship with scientists, astronauts, professors, businesspersons in space-related industries, or companies who could potentially write recommendations for further studies. By being a member, you will have a chance to work with corporates through our Young Marco Polo program.

Being Selected

Student membership is open to all students attending a school of higher education. Please refer to the entry requirements for Individual Membership.

As each chartered members would provide five sponsorships in the form of free annual fees for student members, you may qualify if you take on and lead an initiative at OASA.

Student members with a strong and long track record of support to OASA may also apply for an apprenticeship, a particular type of student membership. These slots are few and will require a separate selection process. Opportunities for more complex and challenging assignments and adventures would naturally fall to those who have the

experience, the knowledge, the attitude, and the skills (also collectively known as competencies).

Expected Contribution in Return

The Orion Astropreneur Space Academy or OASA creates problem-based action-learning games, exercises, role-plays, and experiments, as these methods are highly effective in stimulating learning and retention. But these instruments require that the participants engage themselves in the exercises and be mindful of the learning activities. We seek explorers and players, not bystanders and those who just wanted to watch the world go by. Thus, we seek entrepreneurial students, drivers and not riders. We want young leaders and those who believe they have the “right stuff.”

Honest feedback and constructive comments are important and valuable for the designers, and we expect the students to contribute actively and help improve each of the learning activities. Conversely, we also expect the students to be able to ask for and take feedback. Feedback is the breakfast of champions.
