## Windows 7 hidden secrets

Microsoft was a turning point for Windows 10 with Creators Update; While no world-disruptive upgrades are included, it feels much more like a mature operating system version, especially with new privacy controls, Game Mode and upgraded Edge browser. Let's take a look at the best hidden features, tips and tricks in the operating system. Windows 10 brings together the best of Windows 8 -- super-fast startup, enhanced security -- with many things that make Windows 7 familiar and easy to use, and without trying to force you to buy touchscreens or learn a series of hidden Inter-User GI gestures. Creators Update only make it much sweeter. And if you're a computer lunatic like me, operating system tweaking is always a fun part. Discovering and getting an important new version of an operating system in the application of power user tips is my favorite part. DoS 5.0 is out and I still remember running DOS 3.3 and I have to try all these new things to optimize my 286. When you upgraded from Windows/286 to Windows 3.0, I felt my life change. (We have come a long way.) Nostalgia aside, here's what you need to know to upgrade your Windows 10 installation and take it to the next level. At the time of writing this article, you can upgrade to Windows 10 for free from Windows 7 or 8, al if Microsoft does not advertise. For more information on how to do this, see the link from the university. Read now: 20 best free PC games Browse extremeTech Open series for more in-depth coverage of today's hottest tech topics. Windows 8 is full of great features and useful shortcuts, but there is a lot of useful, lesser-known settings under the hood that you may not know. Here are the 10 best kept secrets of Windows 8. Windows 8 can be used to download today, complete with a new tile. like touch interface ... Read more10. Run Automatic Maintenance in a ScheduleWindows 8 has a new feature that runs automated maintenance tasks daily, such as software updates, security screening, and other diagnostic tests. By default, if you are using your computer, the next time your computer is idle, 3AM runs them. You can change this time in Action Center and tell Windows if you want to wake up your computer to perform these tasks. If you want, you can also perform maintenance manually from the Action Center.9. Customize Apps in Search Bar/O Media, when you start searching from start, you'll see a list of apps under the search bar. When you click on one of them, you search for the same terms in this particular app. What you don't know is that you can change this list by removing and adding apps through the settings of Windows 8. bar (with Win+C), click Settings, and then go to the Change Pc Settings button. From here, in the left sidebar, select Search, and then click You don't want to make room on this menu.8. Activate the Hidden Aero Lite Theme while Windows 8 was in the testing stages, windows aero had an additional Aero Lite theme that took some transparent glass features. However, the latest version of Windows 8 has chosen a much more basic theme than the one being tested, so Aero Lite no longer appears, but you can still find it in the Themes folder on your computer. With a few small tweaks, you can reactivate personalization preferences. It's not much different from the default themes, but it gives the title button bars and some other smaller parts of OS.7 a slightly different look. Enable Hidden Start Screen AnimationWhen you first sign in to Windows 8, you can get a very cool stream-y animation of all your tiles filling the screen. After that, however, the Start screen has much more tone-down animation. If you want to enable cooler animation for each launch of the Start screen, you can do so with a simple Registry tweak. You can also customize some settings for pretty cool animation.6. Customize More Icons in Windows ExplorerIn Windows 7, when you create a library, what was this ugly, nondescript icon? And did you have to go through a complicated process to change that? Windows 8 now lets you customize your Library icons in their settings. Right-click Library, go to Properties, and you'll need to see the option to change the library's icon at the bottom. Bonus tip: If the Favorites icon of Windows Explorer appears in your way in the sidebar, you can right-click the sidebar to hide it (unfortunately, you can't do the same for Libraries, Homegroup, or other annoying icons).5. When you first open create and name apps on the Start Screen, you'll notice that some of your apps are in their group. You can create your own groups by dragging an app's tile to an empty space on the Start screen - it creates its own group. If you want to name your groups, say, for Work, Games and so on - you can do this by clicking the small button in the lower right corner of the screen and right-clicking the groups.4. Take Faster Screenshots For a long time, there was a ridiculous screenshot shortcut that had to press the Windows print screen, then open an app like Paint or GIMP and paste it from the clipboard to the screenshot. No longer! Now, if you start Win+Print Screen (or Win+Audio Down on tablet), Windows will take a screenshot of your screen and automatically save it to your Pictures folder as a PNG file. It's still not as powerful as anything like Skitch, but you just need the screen from time to time, it's nice to see a simple shortcut built into the operating system. Windows: Skitch is a simple screenshot tool that makes it easy to edit, explain, share photos... Read more3. Tweak Rows on the Start Screen By default, the Start screen fills your monitor with as many rows of tiles as it can fit, and up to 6 lines. If you want to lower this number -- maybe you have a particularly great history, or your groups are not that big -- you can change that number by editing the Registry. Unfortunately, it doesn't seem to allow more tile packs on these small monitors, but it's a cool little pinch if you want to give the start screen a lesser look. Hiding Recent Files from Your Jump Lists Was a great addition that helped boost your productivity in Windows 7, but the Recent Items feature is a potential privacy issue - for example, if there are documents or files that you don't want others to know you're viewing. Windows 8 lets you customize Jump Lists more than Windows 7, gives you the option to hide recently opened items and newly opened programs. To access preferences, right-click taskbar, go to Properties, and then click the Jump Lists tab.1. Get More Out of Your Multiple Monitors If you have multiple monitors, you've noticed that windows is expanding your taskbar on both displays. But it does more than that: You can press Win+PgUp to move your existing app to your left monitor and move win+PgDn to the right monitor. Also, if you go to the Desktop Background section of your Personalization settings, you can right-click any wallpaper and choose which monitor you want it to show on. Of course, if you want old-fashioned things, you can also close the double taskbar in Taskbar Properties. Photo: istockphoto.comTechnology has re-identified almost every aspect of contemporary life, and housebuilding and remodeling is no exception. Today, thanks to breakthroughs in design and manufacturing, once-simple building components now have a striking level of sophistication. Windows provides an important example. In the past, the typical window consisted of a wooden frame and single-pane glass. But in 2016, the best windows are filled with state-of-the-art features that serve homeowners and residents better than ever. Still, many homeowners don't realize how much has changed, according to Jim Eldredge, a product manager with Sears Home Services. Certainly, window replacement remains a popular development, but the host tends to follow the project for the same reasons motivated by previous generations-that is, improved energy efficiency and improved aesthetics. Eldredge, these are the expected benefits of installing new windows, and these are valuable goals. Says. But when it comes to cropping windows available, he adds, there are plenty of additional incentives overlooked. For less information about the three lesser-known benefits associated with new windows, read on now!1. EASY MAINTENANCEPhoto: istockphoto.comTo test stand-for look requires the best performance-windows maintenance for decades. How much? It depends on the frame. Their wooden frames should be re-established every three to five years to fend off rotting and mold, because old windows usually need a lot of attention. All the hassle is tired, with many homeowners insisting on spare windows in little demand on the ongoing maintenance path. That's exactly why aluminum windows are popular. Aluminum, however, is extremely conducted and, as a result, does not isolate very well. According to Eldredge, only vinyl offers the best of both worlds-wood insulation capacity and the virtues of easy maintenance of aluminum. In fact, Weatherbeater vinyl windows installed by Sears Home Services rarely need to test more than just cleaning. Of course, cleaning a window can be a pain, if you have ever climbed a ladder to reach the glass on a top story you know well. Good news? Quality modern windows, including the Weatherbeater line, the tilt-in sashes feature that provides easy access to the exterior glass, making a breeze cleaning and freeing up time for what you actually want to do, eldredge comes to its conclusion.2. SES SlimmingPhoto: istockphoto.comOn time, if you were to put your hand on a window on a cold day, you will feel icy as glass temperature outdoors. It wouldn't have the same experience today, says Eldredge. Double or even triple-structured windows can offer increasing heat performance on par with exterior walls. However, some windows are better isolated than others. Sears Home Services' Weatherbeater windows attract particular attention, while the gaps between their compartments are filled with argon, an air-dense gas that is even more isolated. Such innovations help eliminate drafts and minimize energy loss, allowing the host to enjoy more efficient, less expensive heating and cooling. Interestingly, however, many of the same features for the benefit of home productivity are also a secondary benefit usher-they weaken sound. Indeed, a window that washes off uncomfortable cold or hot air also works to block out the sound. Although the host rarely expects to change the window to cause a quieter, calmer indoor environment, this is often the first thing the host notices when new windows go inside, says Eldredge.3. KATMA EV VALUEPhoto: istockphoto.comSavvy know that the host calls for a big investment in window replacement-a major improvement project - often corresponding to money. Hesitation about the high price? Keep in mind that you're not the only one painfully aware of the costs involving house hunters. In fact, it is common for potential buyers to walk from their homes, whose windows will require replacement sooner or later. There's no way you're going to do that. Windows is planning to move after changing, but when it comes time to sell, the preference for up-to-date windows can work for your benefit, Eldredge lyrics, and can cause faster or more lucrative sales. In addition, keep in mind that while new windows may not be cheap, there is no sunk cost of buying and installing. On the contrary, the upgrade adds significant value - in fact, according to eldredge, owners often get back more than half of what they put into the project. It is true that each home improvement offers a positive return on investment, but window replacement- especially consider, like Eldredge notes, high-performance windows help to record climate control every month, in many cases hosting the only major ongoing expense. If the scale of window replacement doesn't scare you, and the price tag doesn't put you off, the biggest source of stress you'll face when you take on this big project will be trying to find and hire professionals you trust. We've all heard plenty of horror stories about amateurs and scammers who accept to do a bad job or do business but never actually come. Since the windows are critical to the integrity of any home and their performance depends on proper installed, it is prudent to do only due diligence and work as responsible as possible. Don't you know where to start? With Sears Home Services, you can start by setting up a free domestic consultation. With a long history of operating across the country, helping the host realize their dreams of nicer, better functioning homes, Sears can guide you through the whole process, the choice of new windows in their time, on-budget installation. To provide peace of mind throughout is to take advantage of the company's marked Satisfaction Guarantee, with sears in your corner--- the assurance that Sears remains committed to the long-term success of your project even after your new windows have been installed.
