RAR for Android is a great file management tool that brings great WinRAR capabilities for Windows to android screens devices. This is undoubtedly one of the best (if not the best) alternatives for working with compressed files on Android. One of the most common types of files we have to deal with is archive files. You've seen them before and they come in zip, rar, 7z, pitches and other types of files. The point of using archives is to put a lot of files in one place that takes up less digital space. If you have some of these files that you need to deal with, here are the best lightning, rar, and unzip apps for Android! Please note that these are apps that specialize in just one event. Most file managers also have built-in archival features and are actually better for general purpose stuff. You can kill two birds with one stone by grabbing one of them. B1 ArchiverMiXplorer SilverRARWinArchiver1 ArchiverPrice: Free/\$1.99B1 Archiver is a popular lightning tool and unpacking different types of archive files. It has support for greets like zip and rar, but also boasts compatibility in a total of 37 formats. It's great if you're used to working with unique or unusual types of archive files that you don't work with every day. It also has support for several parts of RAR and b1 archives if you need it. This is a solid app in general with good design, but you will have to pay \$1.99 if you want to use some features and get rid of advertising. Otherwise, it's a solid app in general. MiXplorer SilverPrice: \$4.49MiXplorer Silver is a file manager app. Technically, any file manager application has basic archiving capabilities. So, if you just need one for ANP or RARs, everything should work. However, MiXplorer Silver makes the list because it handles so much more than that. The list of unboxing and packaging is a little different. However, in general, the app supports about two dozen types of archive files. It's also just a good browser file with all the basics along with advanced functionality. The price is slightly higher than \$1.99 for Solid Explorer, but those who work with archives have no better choice than this one for lightning and unzipping files. Check out the Play Store list for a full list of supported file types. RARPrice: Free /\$2.49RAR from RARLAB, the same developers who developed Winrar, which makes it this Winrar for Android. As you would expect, it comes with support for tons of file types, including great ones like rar, zip, resin, 7z, and many others. There is also a normal array of encryption and password options. With this app, you can also run your archives through tests to see how they stack up and even run commands to repair damaged archive files (with varying degrees of success). It's a powerful app and probably one you should go for. VincipPrice: Free/\$1.99Many people remember Winzip and the app made its way onto Android as well. It carries with it the pedigree of its desktop counterpart, which means that it will either work wonderfully for you or not work at all. If it works for you, you will relate to a decent experience and the app supports all the common and popular types of archive files. What makes this unique is that it has the support of Dropbox and Google Drive. This is a feature that many others have begun to imitate. The design is also surprisingly modern, considering other applications in this space. We'll be honest, this is probably the weakest option on the list, despite having a massive name drop. ArchiverPrice: FreeArchiver is a completely free tool that has been around on Android for years. It provides a decent user experience with typically easy controls, and it comes with support for a large number of file types. There are also the usual encryption options, password protection and shared archives if you need it. There really isn't any razzle dazzle with this app, but it's not necessarily a bad thing. It's great for anyone who just wants to get in, do it, and get out. It will do what you need. If we missed any of the best email, rar, and unzip apps for Android, tell us about them in the comments!
