

OLIVECAST RECORDING

Body-worn video keeps recording in the background, even with the screen off.

PUSH-TO-TALK

Team communication continues as normal.

FIELD APPS

Everyday device use continues in the field.

THE PROBLEM

FIELD REPORTS LEAVE GAPS.

An inspection is reported complete.
An equipment fault is described over PTT.
An incident is explained after it happens.
Without a visual record, teams are left to verify, diagnose and review based on what was reported.

THE SOLUTION

COMMUNICATE. WORK. RECORD. AT THE SAME TIME.

The i.safe MOBILE IS440.1 with OliveCast keeps field teams connected while capturing a visual record of the work.

Video records even with the screen off. Video uploads to Backend via Wi-Fi for long term storage and sharing.

USE CASES

INSPECTION

VERIFY THE WORK

Confirm what was inspected, maintained or checked.

FIELD ISSUE

UNDERSTAND THE PROBLEM

Remote Assistance with Live Call without unnecessary travel to site.

SAFETY

CHECK WHAT HAPPENED

Remotely start video streaming and see what is happening

A VISUAL RECORD TO REFER BACK TO.

Supports Push-to-Talk

Add video documentation alongside existing Push-to-Talk communication without introducing separate recording devices.

All in One Device

Combine communication and video documentation on one certified device, reducing the need to issue additional hardware.

Centralized Documentation

Store and organize videos through the OliveCast Backend for operational review and documentation.

How OliveCast Fits Into Your Operations

Capture

Record field activities as video

Review

Access recordings on device or backend

Manage

Store recordings centrally for reference
