ThinkT510: It's a pretty small drive. 4GB. I don't think it should matter if I open and close it very quickly. mason: ok, can you pastebin the output of sudo smartctl -a /dev/sda mason: write or read? khronoss: Write. ThinkT510: mason: so it doesn't have a smart error log, do you still have the drive connected? where is the dconf? i tried to install the nvidia-current driver and ubuntu crashed after reboot ThinkT510: Nope, not connected. it doesnt show the dconf settings mason: can you pastebin the output of sudo smartctl -a /dev/sda | grep -i read i will restart to see if it works dprtfss: /etc/xdg/autostart/ is the dconf equivalent mason: is it a laptop? ThinkT510: No, this is a desktop. mason: do you know what brand it is? ThinkT510: This is the output of smartctl -a /dev/sda | grep -i read: @Titan you can use the --composesize option of the shred command to make it use a limited size of blocks. ThinkT510: It's an Asus motherboard. ThinkT510: Yes, this is a desktop. mason: are you running win7? and you can use --quick to make it faster by not waiting for completion. ThinkT510: No, I'm running Ubuntu. 520fdb1ae7
