Stick on bifocals near me

\$9.99 There are (0) items in the basket Free Standard USPS Shipping for each order over \$25 (USA, APO, FPO Orders ONLY) Hydrotac™ Stick at Bifocal 2 Pair Offer *** Available for consumer purchase only Hydrotac™ Stick at Bifocal 2 Pair Offer *** Available for consumer purchase onlyHow to use | Use of the video You can turn the glasses into bifokal reading glasses. HydroTac™ Stick-On Bifocal lenses stick with water, removable and reusable, and optically correct magnification of all glasses. Hydrotac lenses are lightweight, ultra-thin flexible lenses with +1.25, +1.50, +1.75, +2.00, +2.50 and +3.00 granular trainers. HydroTac™ Stick-On Bifokal Lenses is a smart alternative for expensive prescription readers. Distortion-free zoom from edge to edge You can cut your custom applications Just add water to adhere to Interchangeable & Reusable Don't leave scraps Easy to install and position stick anywhere your glasses fit all specs Many divers/snorkelers miss out on all the small details simply because they don't have the magnification required. Many individuals, especially those over the age of 40, use some kind of magnification regularly for reading. Divers need to read their compasses, controllers, computer gauges and other instruments. You no longer risk misunderstood one of your instruments or unable to focus the camera. A pair of StickOn Bifocals is a quick and economical solution to add magnification to any dive masks. Order now at a very special price – free shipping within Australia – please note if you don't enter express or paid standard shipping these ship standard letters without tracking this is a brand new product, never made like this before. Zcifi and Hydrotac use brand new techniques and materials. They are more flexible, thinner, smaller, environmentally friendly, uv-protected against yellowing and stick more than ever. These lenses are made of a adhesive silicone as a material that does not require a doctor's prescription. These lenses simply give you the magnification you need when you need it. Simply apply our lenses to the inside of your sunglasses, diving mask, goggles or any other glasses. If you're already wearing reading glasses, you probably know how much magnification you need. Then you need to assign the same magnification Stick to The Bifokal. If you're not sure of the magnification you need, you can ask your optometrist or go into the pharmacy and try some reading glasses, then note the magnification that suits you best. Some information about these lenses: A wide selection of powers (correction factors) Easy to apply Easy removal environmentally friendly materials This product to make a great gift for the occasion Installation guide used sunglasses, safety glasses and Dive masks before installation, make sure the glasses are glasses hands immaculately clean by washing with detergent and hot water. Carefully remove the lenses from the free plastic lenses and store them for later storage. Discard the lenses in hot/hot water for one minute or longer before installation. Apply only one lens at a time to your glasses, near the bridge of the nose and low inside. Press down gently on the lens for a few seconds to remove excess moisture. Put on your glasses to check the correct positioning. This time you can move and adjust the lenses to your specific needs. Using a lint-free cloth gently pat away excess water from the lens. Allow the lenses to sit and dry for 1-2 hours. Remember that the vision of the lenses will be a little blurry until they are completely dried. Repeat these steps in step 2. When removing the lens, simply place your nails under one corner and gently pull it down. These lenses can be reused. You do not need to remove lenses after each dive, simply rinse the mask gently with tap water to remove all salt residues. NOTE: Only for external use! Keep out of the reach of young children if swallowed may cause suffocation. Please chose 縹緞縹緞 縹緞縹緞 縹緞縹緞 縹緞縹緞 縹緞縹緞, different strengths / zoom in the drop-down available +1.5, +2.0, +2.5 and +3.0 縹緞縹緞 #1 need to make a few per customer. Thanks Barry 09-06-2007, 1:48 #2 Originally written by Barry Santini I need to make a few for a client. Thanks Barry You can get them almost half the cost of stickon bifokal com (I wonder what happened toNya?) at Wal-Mart if you're interested in being there. It's got \$8.30 in taxes. Keep in mind that there may be some very serious abbreviations in them. The set I got was a circular wave about 7mm in diameter. No one could get used to them with this weak optics. DragonlensmanWV N.A.O.L. There's nothing patriotic about hating your government or pretending to hate your government, but you love your country. 09-06-2007, 1:50 #3 Contact a fellow Optiboarder, Johns. Rumor has it that he's cornered the market, and there's 8.7 trillion in stock. Last edited by Fezz; 09-06-2007 at 02:21 09-06-2007, 2:08 #4 Thank you, Fezz, but I need them this weekend! Barrs 09-10-2007, 4:05 #5 These authentic Optix 20/20 stickon bifocals. They retail for \$8.99 each, but if you buy 2, you get the third free... That's \$6 net. Why buy them at all wholesale? FWIW Barry PS - stuck them on the back of an Oakley RX Flak jacket, if you must know. 08-08-2009, 10:19 #6 As I said Steve Machol when I got my new welcome on the forum; I think it's kind of a welcome back kind. I'm a strong woman, and it takes a lot to me off. When I first posted on the forum many moons ago, my feelings were damaged, he felt that I had been mocked, betrayed, and belittled as they tried to share with you the 21st century. I'm not mad, and I don't remember names. It's all in the past. Maintaining anger is not good for your health. So I finally put all the hard words behind me and decided to dedicate an entire page on my website to the inventor of the lenses. I must say that it has made a huge difference to the optical community since it disclosed who the inventor was (passed). Now sell directly many to post and have access to this forum. I just signed three new upscale sunglasses boutiques last week and many new retailers too! I'm so excited. It was all who decided to give the lenses a try. I had to read and learn for themselves that this is a product that is a place for businesses/practices for customers/customers... especially now as the economy is so bad and everyone is trying to save everything along the way. As I wrote on the Recommendation page: There is no good deed unnoticed. If you offer the stick on bifocals to a customer who just can't give having them made into their lenses at the time, they will remember you and continue to be a loyal customer when maybe the next time around for glasses or prescription sunglasses they can give the bifocals you offer in your recipe lenses. Thank you all for being open and finally embracing the lenses of what they are: a cheaper means to end low-income, non-income families who remain loyal to you because of the graciousness that offers them this alternative. I hope you're all okay. Like I told Steve, I just wanted you to know that I'm still here, I'm fine, and I'm trying to change your lives and your clients' lives. Be careful and thank you again for your support. I didn't think you'd think about it. But you do! Most on-line stores that sell try to deceive you by showing the low price of the lenses and then adding a huge shipping fee to go along with it; so much more expensive than what we offer. We don't believe in deception to win his business. It's going to be okay. Tonya Last edited by Miss Tonya; 08-25-2009 at 10:24 08-08-2009, 10:32 #7 Originally posted by Fezz Contact a fellow Optiboarder, Johns. Rumor has it that he's cornered the market, and there's 8.7 trillion in stock. The stick in the bifokal does not need shelf life, to my experience. I'm still waiting for confirmation of the rumor. If you order large quantities from us, you can easily double the money and then charge a little extra for placing the lenses on the customer's glasses. It's a Win-Win for everyone! We offer new packaging and freshly made lenses as of August, 2009. Remember, you pay for what you get. Miss Tonya Last edited by Miss Tonya; 08-25-2009 at 10:30 p.m. Cause: NO AM #8 Hey, Tonya! As I mentioned, I do not understand why the company continues to make them in FT styles and why they are so great. Re-device is a round seg, or at least a CT scan to make them smaller and you have more customers. Barry PS - Oh, and since when did their applicability (utility) decrease, how your site suggests that people stock up on an extra pair because they (worsen) lose their flexibility? 08-08-2009, 10:42 #9 Originally posted by Barry Santini Hey, Tonya! Re-device is a round seg, or at least a CT scan to make them smaller and you have more customers. Barry PS - Oh, and since when did their applicability (utility) decrease, how your site suggests that people stock up on an extra pair because they (worsen) lose their flexibility? I don't think 1.2 inch diameter is great at all. The glasses fit perfectly... and if you don't pull out a pair of really sharp scissors and trim them however you need them to fit your glasses or sunglasses, safety glasses dive mask, etc. Up, down, on the side doesn't matter. They stay with warm water. And we've never even suggested on our site that STOCK UP is an extra pair. You read someone else's website or you subscribed to someone else's newsletter that said that. IT'S NOT US AT ALL. Revisit my site for correct information. Stick to the bifokal .com 08-08-2009, 10:48 #10 And our Customer Base: I am busy from morning to evening, seven days a week, processing and filling orders from around the world. I also have two assistants to help me a few days each week. We're not at a loss for business. The lenses of recession are proof if you haven't figured that out right now. It sounds like you haven't changed your attitude towards the product, and I'm sorry to hear it because it's now a minority. Good afternoon. Last edited by Miss Tonya; 08-25-2009 at 10:32 08-08-2009, 12:05 #11 Originally posted by Miss Tonya The stick of bifokal DO has a shelf life. I suggest you don't buy from this John guy if you have 8.7 trillion in stock! hehehe This is true though. No, there's no 8.7 trillion... Anymore. There's a fair amount though. I bought them from an independent retailer (not WM and not online) that thought these are the next best things... He sold a few a year, and he realized it wasn't worth his time. We give them to negotiate F's to convince people they need to be progressive. They may have limited value in third world countries where you can't make it, but as soon as I give away mine, we're done. I'm glad you're working around the clock. It's hard to find success stories like this. I wished I had as much success w/ the product as you did, but then again, it's kind of For example, I wonder why burgers aren't the best sellers in a delicious seafood restaurant... That's not what they're going there for. One thing struck me as strange though. You said they didn't fit in with online retailers, but you're excited they're going to be in a national catalog? Once again, what works... Welcome back, Tanya. I'm glad to hear you're doing good!; resulting: Ophthalmology Optician, Society to Advance Opticianry 08-08-2009, 4:33 #12 Originally written by Barry Santini As I mentioned earlier, I don't understand why the company continues to make them FT styles and why they are so great. Re-device is a round seg, or at least a CT scan to make them smaller and you have more customers. Barry PS - Oh, and since when did their applicability (utility) decrease, how your site suggests that people stock up on an extra pair because they (worsen) lose their flexibility? You said they didn't fit in with online retailers, but you're excited they're going to be in a national catalog? Once again, what works... Welcome back, Tanya. I'm glad to hear you're doing good!; resulting: Hi and thanks Johns! You're right about internet businesses. We were the longest here and had a 99% customer satisfaction rating. Most internet businesses do, frankly, faster than the start-up time it takes. So we are very blessed and grateful for a long life. I get emailed some very strange questions and comments about the product. Someone please tell me why some people, not all, have such a hard time with a lens or a couple of lenses? Duh! :idea: It always embarrassed me not to understand. With the help of older ones you have to work just fine in being a customer where you need them to be progressive. I hope to hold up for that period. It seems you should, but after being informed on the shelf Through the grapes after all these years, I myself was shocked. I can't confirm the truth yet. I'm going to have to investigate this issue on my own. I'm still trying to get an answer to that. My husband still has a pair of his safety goggles that lasted 6 years, so I say I really don't know the answer to the rumor I've heard. I would think that at some point they would just harden, fall off and give out; But I haven't seen him yet. My husband's glasses prove that gossip is different. Does Bayer Corp. not give the substance a shelf life? It's funny you should say that about the seafood restaurant. We (husband and I) enjoy burgers and steaks in upscale seafood restaurants! We eat very few fish. Salmon, tuna, perks, flounder, crab, crab... That's all there is to it. But we make an effort to go to the seafood restaurant because we love hushuppies with our burgers and steaks! Fine! Let's move on... You misunderstood me: I said that lenses don't sell at retail (i.e. Walgreens, Walmart, Rite Aid, CVS, etc.) and they've exploded online over the years and have now offered again some catalogs. My excitement is how well they are doing now to get back some of these catalogs! The eye doctors that have decided to prepare this product for exercise are delivering extremely amazing results. Lenses don't sell themselves. You have to tell the buyer what they are; And in many cases, what we found, the client asked the ophthalmologist... to buy the product for them. This is one of the reasons why retailers purchase 18 or more because of the customer's request for the item. Even though they sell online, many older people don't have internet access. So help them and they will remember the time and kindness the doctor took them from (or one of the receptionists whom you get to call to see you). He never complained to an older person. And we never complained that we didn't solve it. +2.50 and +3.00's sell the most to us. Again, we are only very happy to be able to work with offering our customers the product we believe in. Thank you again for greeting Johns and heresies to you too! : Cheers: Watch out and return processing orders for me... Last edited by Miss Tonya; 08-25-2009 at 10:48 08-10-2009, 4:12 #15 glad to be back here and getting better reception than last time. 08-10-2009, 6:08 #16 Originally posted by Barry Santini Hey, Tonya! Barry PS - Oh, and since when they do their applicability (utility) decreases, that site recommends that people stock up on an extra couple because they (deteriorate) lose It's not his company that makes them, it just distributes them. DragonlensmanWV N.A.O.L. There's nothing patriotic about hating your government or pretending to hate your government, but you love your country. 08-10-2009, 09:22 #17 08-10-2009, 12:23 #18 Originally posted by Barry Santini yes. So, much like optical retail, you don't even need a high school diploma to sell other people's products. DragonlensmanWV N.A.O.L. There's nothing patriotic about hating your government or pretending to hate your government, but you love your country. 08-11-2009, 11:31 #19 Originally posted by Chris Ryser I'm glad to see you back here and getting better reception than last time. Thank you, Chris. I couldn't be happier. I'm not here to promote my product unless you're interested; then just send me a private note and I will respond ASAP. There were already a lot of people who did this! :p these are the big ones in the background that are mainly here to read and learn (and probably make fun of us too, as we discussion forums go ... without knowing it!). Thank you again for the welcome and it's good to talk to you. Be well. 08-12-2009, 12:00 #20 Originally written by DragonlensmanWV It's not his company that makes them, he just shares them. You're 100% right about Dragonman. We were the #1 distributor in the US. I don't know where our situation is in 2009. High up the ladder, I hope. So that distributor can have this benefits by giving me access to knowledge and Bayer Corp.'s when I have questions or questions. ie like this rumor I've been hearing now for the last 2 weeks that the lenses aren't sticking. As I said in a previous remark, I have never heard of this. Never. I'm still waiting for your credibility. I know my husband has a pair of goggles that've been there for six years. They still work the same way they did the first day. The only thing I can say about my husband's experience is this: Work on fat, oil and fork fuel conditions every day to yellow them over time. Long time; and nevertheless, he eventually turned yellow after he was 5 years old wearing it. He eventually changed them to 2.00 instead of the 1.75 he had on them originally. Even with yellowing, it does not affect bifokal vision using the lenses. Probably loved seeing the world of yellow lenses anyway! :) This could be similar to pink lenses! tee hee So JOHNS, if you have that very old product still, I really do not see it and there is no evidence that older lenses will not stick. You have to like it. Sorry to growled at the... but Dragonman is good and take care of those you love and you get love over and over again. Tonya:0) Last edited by Miss Tonya; 08-25-2009 at 10:55 p.m. Reason: misleading info 08-12-2009, 12:11 #21 Originally posted: Yes. So, much like optical retail, you don't even need a high school diploma to sell other people's products. Dragon Man, you have no heart, no soul, and it doesn't make any sense. Now you're destroying the most important people in the business; salespeople. What would you do without your staff? Mi? To tell you the truth; Some don't even have a degree. Am I right? I have three degrees. We look forward to reading them on my website page dedicated to me... CEO :D and written by a family friend/doctor, which I know for most of my life. I seem to remember this conversation years ago. Hum..... about visual retail and college degrees.... Let's move on from it ***. 08-12-2009, 06:20 #22 Originally written by Miss Tonya Dragonman has no heart, no soul and no sense. Now you're destroying the most important people in the business; salespeople. Hum..... about visual retail and college degrees.... Let's move on from it ***. Okay, that's what you said about me last time, but I missed HAR HAR. Then we're even. Peace? DragonlensmanWV N.A.O.L. There's nothing patriotic about hating your government or pretending to hate your government, but you love your country. 08-12-2009, 12:55 #23 Originally posted by Miss Tonya So JOHNS, if you have that very old product still, I really can't see nor proof that older lenses won't stick. This is a sick attempt by someone to disparate to discredit the lenses or dominate the market. He shouldn't be allowed to sell them anymore, IMO. To be fair, I've never had issues w/ them not stuck, regardless of age. Of course, I already know optician that he could not accurately apply press-on prisms either, so maybe this person is not the product. Ophthalmology Optician, Society to Advance Opticianry 08-13-2009, 2:19 #24 Originally written by DragonlensmanWV OK, that was what you said about me last time, but missed out on HAR HAR. Then we're even. Peace? Now I see you're in optical commerce, so that would have put you in the trash, right?! :hammer: Peace and a permanent truce. Because I'm not here to be disturbing, but I have to say... You like to press people's buttons, don't you? I want to read other posts besides this and learn from everyone. Handle? I promise I won't fall for it again, and I didn't mean the things I said unless you know otherwise they're true. Tonya So West Virginia, where to sell and live? I think it's one of the most beautiful states I've ever had the pleasure of going through. It's just a it's right there! I loved it. Take care of yourself... 08-13-2009, 2:36 #25 Originally written by Johns To be fair, I have never had issues w/ them not stuck, regardless of their age. Of course, I already know optician that he could not accurately apply press-on prisms either, so maybe this person is not the product. I'm glad to hear the story that they're sticking just fine and they're a little older. I knew I'd never been told the shelf life EVER from the manufacturer. You are 100% correct about it, that the person is not the product yet the press prisms are applied. ... Let's just say... optical retailer. (Just kidding Dragonman!) We don't get it that often... Maybe twice a year... You're going to laugh at this: I had a gentleman call me three days ago and said: loved the lenses after you applied them, they're just the biggest thing ever, blah, blah, blah... then asked how to re-apply them again (they come in directions)!!! I almost feel like my chair laughed at him (I hope I didn't think he laughed at it) and told him in a hilarious way to start over from the beginning... Like when you first applied them, washed your hands, glasses and lenses with Regular Dawn dish soap, and everything will be fine! Then he mentioned the air pockets under a lens. This may be true, but you don't want to push out all the hot water because it's the Hydro-Tac technology that connects the lenses to the glasses or dive masks. Suction and dry time 12-24 hours. :) Tonya Last edited by Miss Tonya; 2009.08.25., 22:59.
