How to connect monster illuminessence led strip lights

This site is not available in your country While sometimes a personal sacrifice is needed to make a positive environmental impact, such as using products that are environmentally friendly instead of your favorites or swapping convenience to make a smarter choice, the story is different with LED lighting. It's possible to have the best of both worlds when you choose LED.LED stands for light-emitting diode, which can be found inside bulbs. These energy-efficient bulbs consume less energy than incandescent bulbs, and money is saved due to lower energy bills and the need for less replacement due to the long lifespan. Along with easy maintenance and money-saving benefits, there's style and choice.Design and decor has the potential to create a specific feeling, one that you desire to feel inside the place you call home. Let's take a look at the different options to show you how easy it is to make the choice of LED lighting — even if you have your heart set on a certain style. Don't forget to consider some main key factors, such as lumens level, size, and color spectrum. Otherwise, have fun browsing the wide selection and feel the ease of knowing you're saving money and helping preserve energy.Look Into Your OptionsOutdoor LED LightsOutdoor LED lights will not add to your already-existing outdoor maintenance tasks, they'll only add to style and safety. Whether you choose flood lights, wall lanterns, or post lanterns, your yard will be both aesthetically pleasing and environmentally friendly. Along with the variety of types, there's a variety of styles. It's up to your personal choice when deciding on a fixture that's simplistic or detailed. Utilize them for: entryway, driveway, walkways, and gardens. This will help to create a warm and welcoming feeling when you or a guest arrives at the house. For the entryway, wall lanterns can be mounted on the sides of the front door. For the driveway, flood lights can surround the perimeter of the garage. For walkways, post lanterns can highlight the path while adding a sophisticated flair. For gardens, post lanterns do the same, and an added bonus is enjoying the plants and flowers after the sun goes down.Ceiling LED LightsFor both businesses and homes with outdated ceiling lighting, it's probably time to make the jump to LED. The light that's shining down on you or your customers should be of high quality. LED ceiling lights also have an innovative look to them. For homes, owners can incorporate the same stylish fixtures. Once again, style does not need to be sacrificed.Utilize them for: dining room, foyer, living room, and kitchen. Fancy light fixtures such as chandeliers are a popular choice for a dining room or foyer. Not to worry, you have options with LED! For a living room or kitchen, there are options such as spheres and bowls. These fixtures appear exactly how they sound — rounded. Spheres and bowls are great for placing right in the center of the room. There are even outdoor ceiling options, perfect for porches.Cabinet LED LightsWhen it comes to the old versions of cabinet LED lights that many people have, such as halogen and fluorescent, they're very easy to replace with LED ones. In comparison to older versions, LED lights emit less heat, making them favorable in kitchens. Utilize them for: kitchen, office, and craft room. Perfect for providing lighting while preparing food, LED kitchen cabinet lights are very task oriented, but add a special look to the kitchen space. When it comes to the home office or craft room, the cabinet lights play a similar role. Let's take reading as an example. Having that additional light nearby can be a helpful aid. Similar to that, a craft room may need some extra light as well, especially if there are small materials involved. You can also use the lighting to help with the organization of said materials, putting a small cabinet light in each storage area of the cabinet or shelf.Flush Mount LED LightsIf you're looking for something a little more subtle than a traditional light bulb, LED lights are the way to go — especially flush mounts. Flush mounts are ideal for small rooms and spaces. Plus, they do not need the extra heat of a traditional bulb.Utilize them for: closets, laundry room, and mudroom. Just like regular rooms, small spaces should have adequate lighting as well. Plus, nobody said small spaces shouldn't be decorated. For closets, the laundry room and the mudroom, flush mount lights will do the trick. They take up little space, but add a flair that a light bulb with a chain attached won't provide.Linear LED LightsLinear LED lights are designed to be installed almost anywhere and just a few can light up large spaces. This type of LED lighting is popular within offices, mainly because of the compact design, the lack of blinking issues, and other environmental benefits such as zero UV radiation and zero mercury pollution. Utilize them for: kitchen, boardroom, and office. Designed for being useful, linear lights are beneficial in places where work gets done. While seen in home kitchens, commercial kitchens have an even larger need for them. The same goes for a boardroom or office space. They're placed in these areas for practical purposes, but are also recommended for those interested in this kind of look, which can be seen as high tech and sleek.Bathroom LED LightsBathroom decor is just as important as the decor in any other room, which is why there are pieces specifically for the bathroom, such as LED lighting fixtures. The best part of incorporating LED lights in the bathroom is the heat difference. Traditional bulbs give off more heat, causing the room to quickly become uncomfortable once the shower or bath is turned on in addition.Utilize them for: mirror and bath lighting. The LED options for the bathroom will help to create a relaxed and peaceful feel, especially for the bathtub area. For the mirror, task lighting is essential and will provide adequate lighting for getting ready. Choose a long vanity piece to lay across the top or a couple wall pieces to place on the sides.Don't forget that these lighting options are a part of the decor as well. Depending on the desired look for each room, you'll want to consider the style and finish. Some available styles include commercial, contemporary, rustic, traditional, and transitional. Some available finishes include aluminum, black, brass, bronze, gray, rust, silver, and white. As you can see, LED lighting comes with numerous benefits, including energy efficiency, easy installment, long lifespan, style variety, and less heat production. From the front yard and backyard to every room of the home, LED lights put you on the path to being more environmentally friendly without sacrificing choice! Stay on the lookout for the newest styles as the LED lighting trend continues to grow.Featured photo credit: via valleyhomelighting.com Philips announced a new addition to its Hue lighting lineup at IFA today: White and color LEDs mounted on flexible strips. An adhesive backing on the Hue Lightstrip Plus lets you mount these two-meter strips onto just about any surface, and you can chain multiple strips together, up to a maximum of 10 meters."With Philips Hue Lightstrip Plus we're encouraging people to get creative with light and really interact with it," Product Marketing Director of Philips Hue Leonardo Avezzano said in a press release. "Its extendible design along with its connectivity and high lumen output, means that it's even easier for people to use light to create the experience they want across their home." PhilipsAs with Philips Hue LED light bulbs, the LEDs in the Lightstrip Plus can emit either white or color light with up to 1600 lumens of brightness. You program the lights using an app on your smartphone or tablet. In addition to Philips own software, the products in its Hue line can interact with as many as 300 third-party apps, including one that synchronizes with your TV, so that the room lighting changes in accordance with what's happening on screen.Why this matters: In spite of their high price tag, Philips' Hue product line has been one of the more successful LED lighting lineups to hit the market. LED strip lighting is nothing new—Belkin teamed with Osram earlier this year to produce the Lightify Flex RGBW that's compatible with Belkin's WeMo smart-home ecosystem.But at \$120, that kit is quite a bit more expensive than the \$90 Philips Lightstrip Plus (extension strips cost \$30 each). On the other hand, Philips press materials don't make it clear whether or not its light strip includes a Hue controller—Belkin's kit includes a WeMo Link. Adding a Hue Bridge to the price of entry will erase that advantage.The Philips Hue Lightstrip Plus will be available for purchase in October. Editor's note: These bulbs are now available for purchase. You can read our hands-on review here. GE sees too many consumers struggling to get a handle on the connected-home concept. Many are coming to retail stories interested in buying home-automation devices, but walking out empty handed because they don't understand how all the pieces fit together. So the company is mounting a two-pronged attack: It's launching a new online presence—C by GE—a consumer-education and direct-sales storefront, and it's developing a new line of affordable connected LED bulbs.As GE's Global Leader of Commercial Marketing Steven Pepe explains, the company's new online presence is designed to speak directly to consumers, at once "simplifying and communicating more information." GE will also test-market new products at C by GE before introducing them to more traditional retail channels.While one could reasonably assume the "C" in "C by GE" stands for Connected, that wouldn't be too original. Rather, Pepe says, "We liked the play on 'see.' Light should feel optimistic. Bad lighting kills a room's vibe or a person's mood. We want our lights to do the opposite." GE GE will offer a four-pack of its new connected LED bulbs (two C-Life and two C-Sleep) for \$50 starting in January. The first bit of gadgetry out of the C by GE Innovation Lab is a pair of connected and dimmable LED light bulbs, which will be sold in four-bulb packs. GE isn't exactly new to the connected-home space. It backed the crowd-sourced invention company Quirky (which recently filed for bankruptcy), and it partnered with Quirky's viable-for-now spin-off Wink in the development of its earlier GE Link dimmable LED bulbs.Unlike those bulbs, which depend on a Wink hub for control, the new GE C bulbs will have Bluetooth radios, so they can be controlled from a smartphone or tablet—no hub or bridge required. In that sense, the GE C will be similar to LIFX's bulbs, which operate on your Wi-Fi network. GE is shooting for simplicity here: If you can pair a Bluetooth speaker or headphones, you can set up these bulbs. But while they might be simple to install, GE tells us they'll also possess the requisite "smart" features, including the ability to group bulbs and to set timers. GE The GE Sleep bulb produces white light only, but its light can be tuned to a broad range of temperatures. While both GE bulbs produce white light (not millions of colors like the more-expensive Philips Hue), their capabilities and hue vary. The C-Sleep is the more interesting model, as its color temperature can be tuned, like the well-regarded Osram Lightify. Out of the box, GE will preload the associated app with a "recipe" that specifies different morning, midday, and evening hues. I'm no scientist, so I can't evaluate GE's claim that this will help regulate your body's melatonin production—leading to better sleep—but I can tell you that many will appreciate the ability to manually dial the color temperature from 2000 degrees Kelvin to 7000K, dependent on mood, location, or time of day. Need bright white while working? Check. A warmer yellow while chillingax? Not a problem. The C-Life bulb, on the other hand, delivers a fixed color temperature of 2700K. That's suitable for an all-purpose light, and it's my preferred temperature for the non-tunable LEDs around our house. GE GE's new bulbs will be controlled via a smartphone or tablet app, there's no hub required (although they might end up being compatible with the Wink hub). With its focus on simplicity, power users might think GE is taking an unappealing go-it-alone approach. But Pepe says that while a hub is not required, that doesn't mean the C by GE bulbs won't work with one; in fact, he anticipates that the new bulbs will integrate with the Wink platform. Both the Wink Hub and the Wink Relay, after all, are outfitted with Bluetooth radios. Pepe also said that that GE is pursuing "partnerships with other brands," and that we should expect "additional new products" from this group.GE expects to offer four-bulb starter packs (two C-Life and two C-Sleep bulbs) at its online store in January 2016 at the very competitive price of \$50.
