Complete key for schools workbook pdf

Are you about to start college? Are you wondering what changes to expect? How is college different from high school? When you compare high school versus college, you will find many differences, some of which are obvious, others less so. It is important to understand how high school and college differ from each other so that you know what to expect and can have a smoother transition when you start college. In this guide, we'll explain the 15 most important differences between high school and college and give you tips to help make this serious life change a little less intimidating. How is college different from high school? There's so many movies, shows and books to focus on new college students: Many people see the transition from high school to college as one of the most important turning points in their lives. You are no longer a child living under the roof of your parents; Instead you are an adult living on your own and expected to make real, important decisions about your future. You'll have a lot more freedom, but a lot will also be expected of you, both in and out of class. Read on to learn the specific differences of high school versus college. Below are the 15 high school vs. college differences you're likely to encounter once you start college. There are pros and cons to both high school and college, but knowing what to expect will make you better prepared for this big change. #1: You're going to have more independence The biggest change for high school versus college is that in college, you're going to have a lot more independence than you had in high school. Many people focus on the fact that you will live away from your parents and that's part of it, but you'll have independence in many other areas as well. You'll have the freedom to decide what you want to major, what classes you want to take, when you want to schedule these classes, if you want to go out with friends, how late you want to stay, even what you want to eat in the dining room. (I ate Reese's Puffs Cereal every day for four years because my parents never allowed it, and I was thrilled to finally be able to have it for breakfast.) #2: You will be treated as an adult along with your increased independence, you will also be treated like an adult in college, as opposed to a child under parental care. In college, you will no longer need to bring your parents permission slips to sign, you will be trusted to make your own choices for what you want to learn, and you can arrange meetings yourself, without mom and dad helping you. For many students, it's exciting to finally be seen as an adult, but it also means increased responsibility. If you have a problem with or a question about homework, classes, class you have etc., you are the one who will have to solve it. You can't expect your parents to call the school and solve the problem for you like they may have done in high school. #3: There will be wider classes to choose from in high school, you didn't have much choice as to which classes you took. You could probably choose a few electives, but your schedule was mostly filled with standard math, science, English and social studies requirements that all students had to take. In college, even if you attend a smaller school, you will have many more options. They will have a wider range of classes to choose from, and many will focus on more specific topics like astronomy, ancient Roman history, French literature, the geography of the United States, and more. Many college students like this increase in style options since it makes it easier for them to choose classes on topics they are really interested in. #4: Classes will have different formats and sizes Every class you took in high school probably had about the same number of students and consisted of mostly lecturing, perhaps along with some individual or group work. That's not the case in college. Classes can range from two to 500 students, and their format can vary widely as well. Classes can be fully lectured, require practical laboratory work, or be debatable, where you spend most of your time in the classroom, having conversations or discussions with classmates and professors. #5: Your schedule will be more complicated in high school, school started and ended at the same time every day, and your class schedule is probably the same for every day of the week. In college, things get a little more complicated. Some classes meet three times a week for an hour and a half, some meet five times a week for an hour, some meet once a week for three hours, etc. which means you'll probably start and finish class at different times during the week, and you may end up with a different class schedule for each day of the week. Some people like the variety it gives them, but it's important to stay on top of your schedule so you don't finish forgetting to attend class. #6: You'll have a new set of classmates One of the harshest things for many new college students they are no longer surrounded by classmates and friends they have known for years. Instead, you'll be in a sea of strangers (at least at first glance), many of whom come from different areas and backgrounds than you. In addition, you will most likely have a different set of classmates for each of your classes. That's a lot of new faces! This means that you have a lot of opportunities to make all kinds of friends, but expect there will be some awkwardness and loneliness at first as everyone gets to know each other and figure out their friends groups. Additionally, since in college everyone wants to be there (at least on some level), you may find your college classmates more motivated and dedicated to doing well in school compared to some of your high school peers. #7: Classes will require more critical college thinking hard compared to high school? I'm going to it's not easy how to attend another four years of high school. This is a big step in your education and your classes will be more challenging and expect you to keep up. You will be less tested for memorization and basic facts and more on critical thinking skills and the ability to apply what you have learned in class in other situations. You can learn the specific equation of mathematics, and then be asked to apply this knowledge to more complex types of equations, learn about different historical events and be asked to analyze how they have influenced future events, learn the scientific process and ask to describe how it affects the environment, etc. #8: College spending details There's no way around it: college definitely costs more than high school. The cost of tuition is thousands of dollars and you will probably pay for the room and board as well. And these are only basic expenses. College requires all sorts of small purchases too, like special glasses for your chemical lab or an official test taking booklets for final exams. Buying just one college textbook (often over \$100) is enough to never let you take for granted all the free materials you received in high school. #9: You'll spend less time in the classroom Most full-time college students spend about 15-20 hours per class per week, which goes out about three or four hours a day. It's probably a lot less time than you spent in high school classes each day, which means you'll have a lot more unplanned time to spend what you think is best. #10: You'll have more school work Not too happy to spend less time in class; College definitely knows how to keep you busy. The general rule of thumb is that you'll spend about three hours a week on schoolwork for every hour of classes you've in with a standard schedule of 15 credits, which means you can expect to spend 45 hours a week on school work, about as much as a full-time job! It's often a lot more work than students were in high school, so you have to be prepared to adjust. #11: Attendance will be up to you in high school, you had to go to class every day because if you didn't, you might get in trouble for truancy or (sometimes even more scared) your parents might find out. In college, there are no requirements to attend class and no one is going to call your parents unless you show up. However, don't make the mistake some students make and think it means you don't need to go to class. Many professors include attendance as part of your class, and some will even let you down if you miss a certain number of classes without a strong excuse. In addition, it is often very do well in class if you never come up and you pay a lot of money for these classes! Make sure you get most of them that you can. #12: You'll have more social opportunities, even if you were a social butterfly in high school, you'll have tons more opportunities for social and make friends in college. There will be sports teams to join, parties to go, clubs you can be a part of, and more. Most colleges are big enough to have something for everyone, so you have a responsibility to find the activities you're interested in, whether it's a recreational hockey team, a student government group, a club focused on promoting renewable energy, and more. There are also probably many more students in your college than there were in high school, so your opportunities for making friends will multiply as well. However, you need to make an effort to get most of these features. Tap yourself to try new things and start conversations with new people, and if you're nervous, just remember that they're probably feeling the same way. Standard questions to ask new people you meet in college include: Where are you from? What kind of hostel do you live in? What are you doing in your specialty? Be prepared to ask and ask these questions a lot! #13: It will be harder to stand out once you start college, you won't be a big fish in a small pond anymore, and it will be harder to stand out from the crowd. While in high school you may have been a star student/athlete/singer, in college you will be surrounded by many talented classmates, many of whom were also the best at something in high school. Some students are struggling with no longer automatically being discovered, but there are many benefits to this. First, you will be able to bond with other students who are also qualified in your talent. If you were, say, a star drama student in high school, you can't hold the same position in college, but you can make friends with all the other high school drama stars and create some amazing shows together. Also, some students like anonymity to be a new college student brings. If you've been labeled as a jock or a theater nerd for all high school, going to college - where people don't know you - lets you shed or change that identity if you want and try new things (or try the same with less pressure). #14: You get fewer classes in class in high school, you probably have the daily homework you had to complete and received a grade. They, along with some larger projects, quizzes and tests made up your final class class. If you got a low score in one is usually a good thing because there were many other chances to get up for a low class. Once you start college, you may find that many classes have far fewer assignments, meaning that you get fewer grades, and each of these classes is worth more. Instead of regular homework and quizzes, many college classes are based for the medium-term class and the final class. This means that you have to take these exams/documents/projects very seriously because if you mess on one of them it will be very difficult to raise the class to where you want it to be. #15: You'll do a lot of Reading you know these photos of exhausted prospective students sitting next to a bunch of textbooks they have to go through? That's how many students feel. Expect to do a lot of reading in college, including textbooks, magazine articles and literature. If you're majoring in fields like computer science or maths you can expect less reading (and more homework), but you're still guaranteed to have at least a few classes where you're assigned to read a couple dozen pages of textbook before the next class. You will learn your school's library very well. Tips on moving from high school to college Transition from high school to college can be tough no matter how excited you are to start at your new school. Here are three tips to help ease the transition. Know There will be changes that you have already taken one of the most important steps to prepare for the transition from high school to college: you expect and prepare for differences. When you know that moving high school to college will bring major change, you will be more prepared for anything that comes your way. Get ready for some bumps Many movies about college make it seem that new students immediately find a group of close friends, know exactly what they want to learn, and a huge social life. In fact, it rarely works like this. Many new students have moments when they feel uncomfortable, lonely, and homesick. This is perfectly normal; in the end you make a major change in life. By managing your college expectations and not expecting to love it right away, you can better manage the transition from high school to college rather than end up frustrated when it takes some time to feel comfortable. Put yourself There when you first start college, there will be a lot of changes and it will be easy to hang out in your dorm room and text with high school friends. However, you have to resist this desire. College is probably the best time you'll ever have to meet new people and try new things, so you should take full advantage. Keep the dorm room door open to meet your neighbors. With a conversation with your chemical lab partner. Join a club or sport you have never tried before. This will not only make the transition from high school to college easier, since you will be dating more people you can discover a new friend or hobby. What's next? Don't know which college you want to go to? Check out our guide to choosing the right college so you can make the best decision. Stressing over college applications? We're here to help! Our step-by-step guide breaks down the full process of applying to college from start to finish. Worried about choosing a specialty at your college Learn how to navigate the process and make an informed decision. One of the most important parts of your college application is that the classes you take in high school (combined with how well you're doing in these classes). Our PrepScholar admissions team has compiled its expertise in this is the only guide to scheduling your school course schedule. We will advise you on how to balance your schedule between regular and honorary courses/AP/IB, how to choose extracurricular activities and what classes you cannot afford not to take.
