More information FC-AB-A-AA-10 FIDIC Contracts GuideFirst Edition; 2000 Conditions contract for construction conditions contract for plant and design-buildingCondition contract for EPC/Turnkey ProjectsACKNOWLEDGEMENTSFORECONTENTSAbout Chief Project engineer Peter L. Booen FICE FCIArb is a civil engineer, who began his career with a contractor (1965-72) before the arrival of Sir Alexander Gibb and Partners (later GIBB Ltd) He wrote and managed many engineering and construction contracts, both nationally and internationally, including contracts involving financial institutions. He acted as a judge, mediator, expert witness and on dispute boards. He has been active in FIDIC since 1993, as the principal of the Orange Book and its leadership, as well as three major books from 1999 (Building, Factory and Design-Building and EPC/Under the Key). He is a member of the FIDIC Contract Committee and Chairman of the FIDIC Panel for Judges. (Paperback; 350 pages). Also available electronically (PDF: Portable document format). Both costs CHF 350.- (about \$150.-)ConfessionsFederation Internationale des Ing'nieurs-Conseils (FIDIC) extends special thanks to his Contracts Committee: Michael Mortimer-Hawkins (Chairman), Consultant Engineer, UK; Axel-Volkmar Jaeger, partner of Schmidt Reuter, Germany; Christopher Wade, SWECO-VBB, Sweden, Peter L. Buen (main project), GIBB Ltd, United Kingdom; with special advisers (and former Chairman of the Contract Committee), John B. Bowcock, Consultant Engineer, UK, and K B (Tony) Norris, Consultant Engineer, The UK, and legal adviser Christopher R. Seppala, White and Case, France.The Contracts Committee and FIDIC, would like to highlight the extraordinary efforts of Peter L. Booen, Chief Project Manager of Management, as well as as the principal drafter of the 1995 Contract terms for design-construction and turnkey (unofficially titled Orange Book), Orange Book Guide, and three major new books of 1999, contract terms for construction, contract terms for the construction and construction of the contract. The enormous effort offered by Peter Bueno of FIDIC, and the consulting engineering industry, on these major project objectives, is impossible to assess, but Peter's extremely high share, with his colleagues on the Task Force and the Contracting Committee, thanks to the FIDIC, for these efforts Of the Task Force Members of the aforementioned Committee on Contracts and Advisors, however, would like to recognize almost one-handed efforts of Peter Buen in the development of this Contractual contracts and commented on them all. Foreword and abbreviationsIn 1999, the International Federation of Engineering Consilium (FIDIC) published the following four forms of the contract, the first three of which are covered by this Guide and are called CONS, PDA and EPCT:CONS: Construction contract terms, which are recommended for construction or engineering work developed by the customer or his representative, the engineer. In accordance with the usual arrangements for this type of contract, the Contractor builds the work in accordance with the project provided by the customer. However, the work may include some elements of civil, mechanical, electrical and/or construction work developed by the contractor. PSB: Construction and design contract terms, which are recommended for electrical and/or mechanical facilities, as well as for the design and performance of construction or engineering work. In accordance with the usual arrangements under this type of contract, the Contractor designs and provides a plant and/or other work in accordance with the requirements of the Employer; that may include any combination of civil, mechanical, electrical and/or construction work. EPCT: Contract terms for EPC/Turnkey projects that are recommended when one organization is fully responsible for the design and execution of an engineering project. In accordance with the usual arrangements for this type of contract, the organization carries out all engineering, procurement and construction work: the provision of a fully equipped facility, ready to operate (at the turn of the key). This type of contract is usually discussed between the parties. A short contract form that is recommended for construction or engineering work is of relatively little capital value. The short contract form is not covered by this Guide. In this Guide to the Use of CONS, PDB and EPCT, the word Book (using the capital letter) is used when it comes to three publications: CONS, PSB and EPCT. These books were originally published as test editions in 1998, and many of the reactions to them were considered before the first editions were published in 1999. These three books were produced by the FIDIC Update Task Force consisting of: Christopher Wade (Group Leader), SWECO-VBB, Sweden; Peter L. Booen (main project), GIBB Ltd, United Kingdom; Hermann Beyrlein, Fichtner, Germany; Christopher R. Seppala (Legal Counsel), White and Case, France; and Jose F. Speziale, IATASA, Argentina. These publications were produced under the general direction of the Contracting Committee, which then included John B. Bowcock, Consultant Engineer, United Kingdom; Michael Mortimer-Hawkins, SwedPower, Sweden; and Axel-Volkmar Jaeger, partner at Schmidt Reuter, Germany; together with K B (Tony) Norris as a special The guide was written by Peter L. Booen and reviewed by the Contracts Committee, which now includes Michael Mortimer-Hawkins (chairman), Christopher Wade, Wade, Jaeger and Peter L. Booen; with John B. Bowcock as Special Counsel and Christopher R. Seppala as Legal Counsel. Commentary on paragraph 18 was also considered by Mark Griffiths, Griffiths and Armour, United Kingdom. FIDIC would like to express its appreciation for the time and effort that is being burdened by all of the above. Each of the three books consists of three parts: General Terms, a part that is intended to be included (by reference) in each contract, and sub-clauses of which are often mentioned in this Guide without the use of the word Sub-Clause (e.g. CONS 1.1); A guide to preparing specific terms, a part that is referred to in this Guide as GPPC, which begins with the proposal of a suitable formulation for the inclusion of relevant general terms in the contract, and which is made with the attached forms of the example of securities; and Forms of Tender Letter, Treaty Agreement and Dispute Agreement, part that is mentioned in this Guide as An Example Form (s). In this Guide, the texts in the Books are reproduced in a three-column layout. Texts should be identical to the relevant texts in the Books, but the reader should turn to the Books to determine the necessary authentic formulation in case of any inconsistency. For the convenience of those who are familiar with the general terms of the contract contained in previous FIDIC publications, the reference numbers of their subclauses, which cover similar topics, are included in the insertion after these three-purpose texts reproduced from the books, sub-heat reference numbers related to:RB: Terms of contract for the construction of civil construction 4th edition of the 1987 amendments of 1992 (usually referred to as the Red Book) ; Terms of the contract for electrical and mechanical works of the 3rd edition of 1987, as amended in 1988 (commonly referred to as the yellow book)OB: Terms of the design-construction contract and the turn-key 1st edition of 1995 (commonly referred to as the Orange Book). In each contract, the terms of the contract governing the rights and responsibilities of the parties will include the relevant general terms, together with the specific conditions. Specific conditions for each individual contract will need to be prepared, taking into account comments, comments made in this Guide and the relevant GPPC. It is essential that all of these editorial tasks and all tender documentation be assigned to staff with relevant knowledge, including contractual, technical and procurement aspects. While the Guide may include useful materials for training procurement staff, it is not intended to provide the complete training material for the examination required to prepare the tender documentation. Comments in this Guide are designed to help have such experience, such users are those who write or manage construction and/or engineering contracts. The comments in this Guide are not exhaustive and are intended only to provide general guidance. They should not be relied upon in a particular issue or situation. Expert legal advice should be obtained if necessary, and especially before the conclusion or termination of the contract. Neither the FIDIC nor the persons named in this Guide accept any responsibility or responsibility arising from any use of this Guide or any other publication named in the present. FIDIC occasionally receives requests for assistance in interpreting individual contracts based on the terms of the contract, which includes fidic publications. However, as an international federation of consulting engineers, FIDIC cannot take legal advice. For this reason, and because the legal interpretation of the treaty will depend on issues such as the exact wording of the various documents involving a specific treaty, as well as on the governing legislation, FIDIC cannot assist in interpreting individual contracts.
