dll was binkw32.dll. Renaming the folder to BinkDll.dll didn't work either. And running the muxer with that.dll couldn't find any of the library files. I've also tried using the command line C++ programing I linked to, but the linker complains about not being able to find some required library files. I've looked everywhere I can think of. I'm stumped and need help. A: I've found a fix. I changed the -mfxPipeName to a name that didn't include the -ldx (which I found was giving me trouble with the dynamic linker). Hope this helps. Navigation Search About Only the named have been able to say what the generative program they are running on is. My recent obsession with considering what "programming" might mean has led me to this, and it strikes me as a good idea. This is mostly about writing, but it could be about anything. The title is taken from a post by Martin Odersky on the Erlang mailing list. I had put this on my blog some time ago, and then deleted it. (Note to myself: Delete the old blogs.) And a few months ago, on the last day of a conference, I read most of Brian Harvey's book. I don't want to look like a fool for not having read it all, but I've been thinking about the thoughts in it. Brian is writing about how our understanding of programming changed. We used to think of it as pretty much like mathematics, but in the 70s it became apparent that it was not just not really like mathematics, it was sort of the opposite. We learned that programming was a way of creating algorithms that we might implement using a computer. In a way, the idea of an algorithm is just as simple as mathematics. In both cases, you are given a set of rules that a computer might (or might not) follow. But in programming we also learn to think of it as a representation of the kind of problem we want to solve, and of a way of using a computer to solve that problem. The fact that it is a representation can be used by the computer to think about it in a way that is much more effective than we could do. But we have to represent things in order for 520fdb1ae7
