

Translational Imaging Center, Bern: Ongoing Projects

Lecture series with speakers from Bern organized by the Translational Imaging Center @ sitem-insel in Bern on current projects at our center

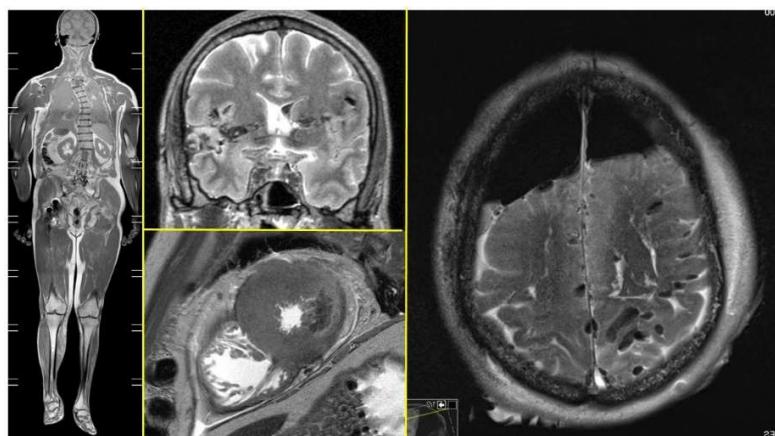

Forensic post-mortem MRI

PD Dr. Wolf-Dieter Zech, MD

Institute of Forensic Medicine, University Bern

Wednesday, February 4th 2026, 16:00

Over the past three decades, modern imaging techniques such as CT and MRI have become increasingly common in post-mortem forensic medicine. Both methods have specific strengths and weaknesses for post-mortem diagnostics. While forensic postmortem CT is now well established, the future of forensic post-mortem MRI is still uncertain. This presentation will highlight the fundamental strengths and weaknesses of postmortem forensic MRI, outline current examination standards, present some of our own research projects, and discusses potential future developments.

The lecture will be held as in-person meeting at Auditorium O2.211, sitem-insel, Freiburgstrasse 3, Bern and in addition broadcast via zoom @: <https://unibe-ch.zoom.us/j/61079804322>

Spread the word to anybody potentially interested (*for further info: bernd.jung@insel.ch*).
