

Introduction

Magic™ by Phantom Glass is a molecular glass protection technology that has been engineered to be the strongest and thinnest screen protection on the market. Using a proprietary blend of materials, Magic™ is the next generation of screen protection. Applying Magic™ is as simple as wiping it on, and wiping it off. There's no bubbles, squeegees, applicators, aligning, or removing dust particles.

Magic™ works because of the principals of glass on the molecular level. All manufactured glass has microscopic pores on the surface. Magic™ fills these pores and creates a flexible, yet strong layer of protection that has been proven to be over 500x more scratch and impact resistant versus untreated glass.

Because Magic™ is a universal “one size fits all” solution, there's no limit to the surfaces that can be protected. We've done extensive drop and smash testing with Magic™ and found that it's a very effective screen protector for smartphones, tablets, laptops, cameras, and smartwatches. Anything with a glass surface is compatible with Magic™.

It works like... Magic™.
