

Getting started with RSK MainNet Beta.

We always put security first at RSK. Therefore, we are opening our MainNet Network in a staged approach.

To get started with RSK and deploy your solution, we invite you to fill in this form to whitelist your project. We found the whitelist process to be the responsible and professional mechanism to gradually open our platform. It'll be only necessary for a few months until the first stage of the Bounty program is finished. We'll then remove this process and the platform will be wide open, and if you were not accepted during the whitelist process you will be able to enjoy our platform after this opening.

After you complete the form, we'll come back to you in the next 3 (three) business days, communicating the acceptance or the rejection of your project. Decision will be made at the exclusive and sole discretion of RSK. Please remind that by the using of the platform you are agreeing to the RSK Terms and Conditions which we always advise to read carefully. In addition, you should set out that all the users of our platform do so at their own risk and that RSK is not responsible for any outcome of using it. RSK do not make any warranties or representations as to the content of the platform, the quality or availability.

Please bear in mind that RSK assumes no responsibility or liability for any errors or omissions in the content of the platform and, that all the information contained on it is provided on an "as is" basis with no guarantees of completeness, accuracy, usefulness or timeliness. The Platform is not intended to be a source of advice or credit analysis, in that sense, we strongly recommend that your decisions should never be taken without first assessing your own personal situation.

For more information about the platform software and licensing, please see the following link <https://github.com/rksmart/rskj>.

RSK Labs is the company behind the Project codenamed RootStock, a smart contract platform with a 2-way peg to the Bitcoin Blockchain. RSK founders have been actively involved in the Bitcoin ecosystem and smart contract development since early 2013. The company was founded in 2015 and its initial white paper was later published on December 2015.
