Fallout 4 is a role-playing game developed by Bethesda Game Studios and published by Bethesda Softworks. The game was released in November 2015 and is the fifth major addition to the Fallout franchise. Many fashions for the game also became available pretty soon after the release. Most users use the Nexus Mod Manager in order to use the fashion game, which is a modding app that allows users to apply a lot of mods to the game. Fallout 4 As it may be, recently there were many reports that fashions are not working on Fallout 4. This problem has arisen with users using Nexus Mod Manager in order to mod the game. In this article, we'll discuss some of the reasons why this problem might arise and provide you with viable solutions to ensure that the problem is completely eradicated. The cause of the problem is not specific and can be caused for a number of reasons. Unconfigured .ini files: The .ini files inside the game's data folder must be properly configured to work with Nexus Mod Manager and the game. If these files weren't configured when installing Nexus Mod Manager, the mods won't work with the game. Firewall: It's also possible that the Windows firewall could block some elements of the game or Nexus Mod Manager from contacting the server. This can prevent the Nexus Mod Manager from downloading because the internet service can be important for some Mods.Multi HD Set: Nexus Mod Manager works best if the virtual setup is on the same hard drive as the game. However, if you want to keep space in a certain hard drive by installing the game on one and mods on another Nexus Mod Manager allows you to do so, but to achieve that, you have to turn on Multi HD Set during the NMM installation process. Updates: Also make sure that you have a Nexus Mod Manager update in the latest version, because older versions are reported to cause problems with some Plugin files, so causing problems with Mods.Administrative Privilege: It is important that the Nexus Mod Manager has administrative privileges granted because some components of the application need certain privileges that only the administrator has the right to provide. Faulty fashions: In some cases, some of the mods used by users are outdated or damaged and have caused problems with the mod application process. This can happen if the mod version numbers are very old and they have not been updated to work with the latest version of Nexus Mod Manager.Now that you have a basic understanding of the nature of the problem we will move forward to solutions. Solution 1: Setting up .ini FilesThe .ini files inside the game data folder should be properly configured to work with the Nexus Mod manager and the game. If these were not configured when the Nexus Mod Manager was installed Mods would not work with the game. So at this point we'll set up .ini files to work properly with the app. To do this: Go to the next Folder. Documents of MyGames.gt;Fallout4In this folder should be several files .ini. If you see a file called Fallout4Custom.ini open it. If the file is not inside the folder, create a Notepad file and save it with the name Fallout4Custom.ini. Edit the .iniPestin file and add those lines to it. (Archive) bInvalidateOlderFiles-1 sResourceDataDirsFinal-STRINGS, TEXTURES, MUSIC, SOUND, INTERFACE, MESHES, PROGRAMS, MATERIALS, LODSETTINGS, VIS, MISC, SCRIPTS, SHADERSFX, adding commands to fileNext, should be a file Fallout4prefs.ini, edit this and add a line bEnableFile Note: If bEnFilableSelection0 exists in the Launcher section, just change 0 to 1Sop to save the changes and exit the file Note: Don't forget to call it Fallout4Cus. Solution 2: Providing access through the firewall It is possible that windows firewall may prevent the game or Nexus Mod Manager from making contact with game servers. At this point, we'll allow the app through Windows Firewall.Click in the start menu and select settings Icon.In Settings select the Update and Security option. Click on the Windows Security option on the left glass. Within the Windows security option, select Firewall and Network Protection. Choose the Allowing app through the firewall. Click on the Change Settings button and provide all apps associated with Fallout4 and access to the Nexus Mod Manager through the Private and Public Networks. Click on the OK button, start the game and see if the problem persists. Resolution of the application via theSolution 3 firewall: Multi HD installNexus Mod Manager works best if the virtual installation is on the same hard drive as the game. However, if you want to save space in a certain hard drive by installing the game on one and mods on another Nexus Mod Manager lets you do that, but to achieve that, you have to turn on Multi HD Set during the installation process. If the Multi HD installation was not enabled during the installation process and now the fashion and game are on different hard drives, then the mods will not work. Solution 4: Update Nexus Mod ManagerMake is sure that you have a Nexus Mod Manager update to the latest version because older versions are reported to cause problems with some Plugin files, hence causing With mods. Each update released by the community corrects a specific error. In order to make sure that the Nexus Mod Manager is clean of all certain bugs and problems make sure to update it every once in a while by downloading and installing the latest version from the developer's site. Solution 5: Giving administrative privileges For another time, due to insufficient resolution, Nexus Mod Manager faces problems when applying mods, so at this stage we will provide software with administrative privileges in order to make sure that this is not the case. On the right, click on the Nexus Mod Manager icon and select Properties.Click on the Compatibility tab. Inside the Compatibility tab, check the Run box as an administrator. Click on the Good Giving of Administrative Permits button. Solution 6: Removing faulty modsIn some cases, some of the mods used by users are outdated or damaged and have caused problems with the mod application process. This can happen if the mods are very old and they haven't been updated to work with the latest version of the Nexus Mod Manager. So at this point, we'll check which mod is causing the problem and remove it. Open the Nexus Mod Manager and click on Fallout 4 to open a list of established mods. Turn off all mods and check if the game is working. Turning off mods in Nexus Mod Manager.If the game works it means that one of the mods is causing a problem. Now turn on one mod and check if the game runs. Similarly, continue to incorporate mods one by one until the game no longer works. Now that you have identified the mod that was the cause of the problem, deactivate it. If there is an update released in the mod apply this. If there is no update, then you will have to keep the mod disabled until the fix is released by the fashion developer. 1.) Place esp and all folders (grids, textures, materials) in the data folder. YourGamepath Fallout 4Data2.) Edit plugins.txt in File C: Users (users)AppData (Local Fallout4 (you can search %appdata%)Add these lines to the list; MoreHairstyles4Male3.1.espMoreTailHairstyles4Femalele4.1.espMorebeard4.espMiscHairstyle.esp (and other mods) Save plugins.txt and since the new patch is disabled .esp Files, you will need to take this step to stop the launcher from rewriting plugins.txtRight click on plugins.txt Edit Fallout4Prefs.ini file C: Users (user name) DocumentsMy gamesFallout4Under (Launcher) add this line Launcher bEnableFileSelection.14.) Edit Fallout4.ini file C: Users (user name) DocumentsMy gamesFallout4Under (Archive) add/change this line to look like TEXTURES, MESHES, INTERFACE, MUSIC, SOUND, PROGRAMS, MATERIALS, LODSETTINGS, VIS, MISC, SCRIPTS, SHADERSFX-'GT;Alternative Method for 4.) method above works for me, but if it doesn't work for you, try this: For better results, set the game details to at least Medium. Now you can delete all the files / uncheck esp.':: How to get :: You can change your hair at the start of the game, or go to a hairdresser in the city, or use the console 'SLM 14'. I haven't played for months and now want to try Far Harbor, but my hair mods don't work. I obviously couldn't walk through the wasteland with those lame vanilla hairstyles, so I tried everything I could to fix it. I deleted the interface folder, turned on the mods in the game, messed up with .inis, and completely cleaned my computer of everything related to Fallout 4 and rebooted, but I still can't get rid of those bald heads. It seems that my problem is part of a sea of issues related to modding after the update 1.5 yet I can not find a solution for the mine in the said sea. Does anyone have any idea how to fix it? If you need more information about my game to understand this, then by all means let me know. I solved this issue myself, no need for this anymore. I hate these kinds of posts, you know your question is going to appear for other people having the same issue looking for resolutions, and you just pretty much say, hey, I've installed it, but I can't be bothered to tell you people what I did. I hate these kinds of posts, you know your question is going to appear for other people having the same issue looking for resolutions, and you just pretty much say, hey, I've installed it, but I can't be bothered to tell you people what I did. I'll be honest with you and say what I was thinking about posting a solution, but I was too lazy. Instead of criticizing me for not doing this, you might just ask. I fixed my problem by going back to Fallout4.ini and changing sResourceDataDirsFinal to sResourceDataDirsFinalSTRINGS, TEXTURES, MESHES, INTERFACE, MUSIC, SOUND, PROGRAMS, MATERIALS, LODSETTINGS, VIS, MISC I've already done this, but this time I've cleared Fallout 4 from my computer and completely rebooted it and reinstalled all my mods, so it's likely that soemthing still causes a problem along with what doesn't exist. Thank you, I had the same problem recently. Bless you guy. Thank you, I had the same problem recently. Bless you guy. nvm, it doesn't seem to be working. Work.
