A complete set of tools for learning, learning and understanding the basic concepts of Automatic Edition control systems after the famous edition, Automatic Control Systems has delivered to date, a real coverage designed to guide students to the basics of management systems. Automatic control systems include not only the full text, but also innovative virtual laboratories that copy physical systems and hone readers' problem-solving skills. The tenth edition is the concept of Control Lab, which includes two classes of experiments: SIMLab (model-based modeling) and LEGOLab (physical experiments using LEGO® robots). These experiments are designed to complement or replace the experimental impact of students on a traditional student management course and allow these students to do their jobs at MATLAB® and Simulink® environment, even at home. This cost-effective approach can enable schools to equip their laboratories alongside LEGO test beds and provide maximum access to equipment for less than the cost of current management experiments. In addition, as an additional teaching tool, students can take the equipment home and study at their own pace. This new edition continues the tradition of excellence with: More solved examples of Online labs using both LEGO MINDSTORMS® and MATLAB/SIMLab Enhancements of easy-to-use MATLAB GUI software (ACSYS) to allow the interface with LEGO MINDSTORMS Valuable introduction to the concept of Control Lab A logical organization, with chapters 1 to 3, covering all background materials and chapters from 4 to 11 presenting material directly related to the subject of managing 10 online applications, including Initial Matrix Theory and Algebra, Laboratory Management, Difference Equations, and Mathematical Fund Solutions Guide available to instructors Accepted by hundreds of universities and translated into at least nine languages. Automatic Control Systems remains the best resource for students to gain practical insight and prepare them for the challenges, that they'll ever encounter. For practicing engineers, it is a clear, thorough and ongoing self-towing resource that they will turn to over and over again throughout their careers.
