Copyright 2003-2019 Film-Tech Cinema Systems LLC UBB.classic™ 6.3.1.2 Thread I recently purchased the Eumig RS 3000 Super 8 sound projector, it works, I believe, but I can't thread the reel. Doesn't have a take coil to be found. Whether someone has a copy or not, where you can get a copy of the instruction. Or someone else's projector that can give me some information about the beast. His projector is like a TV. Thank you in advance!! I don't know anything about this particular block, but SFAIK you'll need to take up the reel and they are standard and should be mutually beneficial. Where to find it is a good question. Marvingj, for a take-up reel you might check out... PS. What do you mean by a television type of projector? Its projector that includes a screen like a 13-inch TV where you can either let it run through the screen rather than a projection screen or flip the flap and you could play it on the wall if you like. I'm a puzzler because the beast has only one place to reel, can't find where the coil would go. If I could make it work it would be great for the Super 8 Dv sharing. Still looking for some original instructions. Thank you! I know that in the early 70's, Kodak produced an S8 Movie deck with a built-in take-up reel. The power coil will sit flat on top of the device, and is fed into the projector. The built-in takeup coil was at the bottom of the device. Maybe you have something like that? Every other S8 projector I've ever seen has always had a spindle where the squirt would click on. This one seems to be on the side and looks like it has an automatic thread of some sort. This is what it looks like. Is this the one with the integrated screen? (e.g. TVset); I think they used a system with coaxial (double) drums like feeding coils and take one. I suppose take the reel is one next to the rest of the device, perhaps you put the feeding coil on the outside and see if there is a small slot where the movie can enter. The main switch may have a thread position (before the projection lamp starts)... See if the movie goes, where your take reel should be (do you have an empty 400 reel?) can't help with where to take the reels of life, but here are two places that will sell you instructions for it. it look like this? That's what it looks like. What's so amazing is there's no room to take the reel. So he has to use the same I think. If I can get it to the thread it would be a decent transfer unit for super 8 dVd. I look at Pure hard to find parts and information about this block. Thank you for helping everyone. Message - Packing Total 4.95 euros per order. Fast delivery is delivered within 12 hours. Delivery is usually within 6 days. Guaranteed if you are not completely satisfied with your order just send it back and we will give you a full refund. He trusted me for more than 40 years in business. All over the world we deliver to any country.
