LEADALEAP
INTEGRATED IMPACT ENGINE

Executive Equity Co-founder / Investor Overview

2026

The Venture

LEADALEAP is a Spanish government-validated (ENISA/UGE-CE) circular infrastructure platform. We transform "radioactive" urban waste (cigarette filters and unrecyclable plastics) into sovereign industrial assets for climate-resilient agriculture and green construction.

Strategic Opportunity

We are offering a select number of **Equity Co-Founder** positions. This is an active role intended for individuals who wish to lead a core module of our 9-part ecosystem while securing Spanish residency.

- **Investment Entry:** €150,000 for 10% Equity, or €75,000 for 5% Equity*
- **Asset Valuation:** Entry at a discounted €1.5M valuation (Internally benchmarked and industry-vetted at **€6M** based on IP and technical protocols).
- **Immediate Leverage:** Founders enter with a **4x strategic leverage** on their capital from Day 1.

Client Advantages

- **Residency Fast-Track:** Under the Entrepreneur Visa framework (Law 14/2013), founding members of validated startups receive priority processing (approx. 20 working days).
- **Institutional Shield:** Direct alignment with the Spanish National Strategy for Entrepreneurship.
- **Financial Matching:** Our status triggers eligibility for 1:1 ENISA non-dilutive, non-collateral matching loans up to 1.5 million euros, and unlocks aligned EU priority program funding, doubling the impact of the co-founder's initial contribution.

**This may be further discounted with a stronger skill-to-project alignment in such roles as international growth or applied research*

Integrated 9-Module Ecosystem

Our competitive moat is the synchronization of hardware, chemical refinement, and biological restoration:

1. **Industrial (Modules 1-3):** R2W (Plastic-to-Structural) and CiggyBuddy (Filter-to-Fiber) processing through our **15-Stage Refinement Hub in Andalucia** (Q3-Q4, 2026).
2. **Biological (Modules 4-7):** The **Orchard Sustainability Project (OSP)** featuring the **OMLB (Life Bucket)** and **Life Pack** passive irrigation.
3. **Governance (Modules 8-9):** A **Digital Twin/Portfolio Dashboard** for ESG transparency and a **Glocal Marketplace** for community waste-exchange.

FACTS TO CONSIDER FOR AN INFORMED DECISION

Spain's Entrepreneur Residency Pathway Under Law 14/2013

Strategic Considerations for Prospective LEADALEAP Equity Co-Founders

A RESIDENCY DECISION IS ALSO A FINANCIAL DECISION

For many internationally mobile families, relocating to Europe is motivated by:

However, the immigration pathway selected can significantly influence:

- ✓ Financial sustainability
- ✓ Economic participation
- ✓ Career continuity
- ✓ Long-term wealth preservation
- ✓ Business opportunity access

Spain currently offers multiple residency pathways. Two commonly considered categories are:

Both are legitimate pathways, but they are designed for different objectives.

UNDERSTANDING THE DIFFERENCE

NON-LUCRATIVE RESIDENCY

The Non-Lucrative Residency pathway is generally designed for financially self-sufficient individuals who intend to reside in Spain without carrying out professional or employment activities in Spain.

This route is commonly suitable for:

For some families, this structure works well.

However, for working-age professionals, founders, operators, and growth-oriented families, the long-term financial implications should be carefully evaluated.

CASE SCENARIO: LONG-TERM CAPITAL PRESERVATION

Consider a family of three to five relocating to Spain with approximately USD \$450,000 in savings under a Non-Lucrative Residency structure. Over a multi-year period, those funds may gradually be allocated toward:

Illustrative Capital Erosion Over Time (USD)

While this may still provide a strong quality of life, the capital itself may remain largely non-productive from a business growth perspective.

For some families, this may create increasing financial pressure over time if there is no aligned long-term income-generation structure connected to their relocation strategy.

COMPARISON AT A GLANCE

FACTOR	NON-LUCRATIVE RESIDENCY	ENTREPRENEUR RESIDENCY UNDER LAW 14/2013
Primary Objective	Reside in Spain without working	Develop an innovative business of economic interest
Work Authorization	No work permitted in Spain	Self-employment through approved business
Family Work Rights	Not automatically permitted	Generally permitted without separate work permit
Capital Utilization	Used for cost of living and settlement	Allocated toward business development and growth
Economic Participation	Passive	Active
Long-Term Potential	Lifestyle-focused	Growth and scalability focused
Evaluation Process	Documentation-based (less complex)	Substantive evaluation (innovation, viability, impact)
Strategic Value	Personal relocation	Economic participation and EU market access

ENTREPRENEUR RESIDENCY UNDER LAW 14/2013

Spain's Entrepreneur Residency framework under Law 14/2013 was created to support projects considered innovative and of economic interest to Spain.

The pathway is administered through Spain's strategic immigration framework, including evaluation structures associated with:

Unlike passive residency structures, the entrepreneur pathway is designed around:

- ✓ Business development
- ✓ Innovation
- ✓ Economic participation
- ✓ Scalability
- ✓ Long-term project growth

A DIFFERENT CAPITAL APPROACH

Rather than relying entirely on savings consumption, some families may consider allocating part of their capital toward strategic business participation aligned with their expertise, operational involvement, and long-term objectives.

Example Capital Allocation (USD \$450,000)	
BUSINESS PARTICIPATION (Equity Allocation) \$200,000 – \$250,000	FAMILY SETTLEMENT & STABILITY \$200,000 – \$250,000

This creates a different financial positioning model:

- ✓ Part of the capital supports residency transition
- ✓ Part of the capital may support participation in long-term economic activity and business growth

IMPORTANT REALITY

The entrepreneur pathway is highly documentation-intensive and subject to substantive evaluation. Approval is not automatic.

Applications are assessed based on factors such as:

This is one reason many conventional immigration pathways remain administratively simpler.

However, for qualified applicants seeking long-term economic participation in Europe, the entrepreneur pathway may provide a more active and growth-oriented framework.

WHY LEADALEAP

LEADALEAP is being developed around long-term infrastructure and sustainability sectors connected to:

- Water systems
- Agricultural resilience
- Circular systems
- Climate adaptation
- Resource efficiency
- Human daily-life infrastructure

The ecosystem structure includes multiple interconnected project modules capable of long-term operational relevance.

The strategic objective is to position within sectors that remain essential regardless of changing market cycles, technology trends, or short-term economic shifts.

FINAL CONSIDERATION

The key question is not simply: "How do we relocate?" The deeper question is:

"How do we relocate while preserving long-term economic relevance, opportunity, and financial sustainability?"

For some families, passive residency structures may be fully appropriate.

For others — particularly founders, operators, technical professionals, and globally experienced entrepreneurs — an entrepreneurial pathway aligned with active economic participation may provide stronger long-term strategic positioning.

SPOUSAL WORK FLEXIBILITY

Under Spain's Law 14/2013 framework, family members accompanying the entrepreneur may generally obtain residence authorization with access to employment rights in Spain without requiring a separate work permit process.

In practical terms, this may provide:

- ✓ Greater household financial flexibility
- ✓ Career continuity for spouses
- ✓ Improved long-term integration opportunities
- ✓ Additional economic stability during business development years

EUROPEAN POSITIONING

Establishing operations in Spain may also provide strategic access to:

This positioning may become increasingly valuable for companies operating in sectors aligned with:

- Sustainability
- Infrastructure
- Climate resilience
- Water preservation
- Circular economy priorities
- Agricultural adaptation systems

LEADALEAP IS POSITIONED FOR PROSPECTIVE EQUITY CO-FOUNDERS SEEKING:

- Long-term relevance
- Strategic participation
- Infrastructure-aligned growth sectors
- European market positioning
- Collaborative ecosystem development

INTEGRATED IMPACT ENGINE

THE 90-DAY "LEAP" ROADMAP

A logistical timeline for the transition from international professional to European Founder.

Phase 1

Alignment (Days 1–15)

- Initial arrival in Spain and technical due diligence of the LEADALEAP IP Portfolio.
- Execution of the Equity Contribution Agreement and Notary appointment for corporate expansion.

Phase 2

The Fast-Track (Days 16–35)

- Submission of the UGE-CE Residency Application under the Strategic Interest category.
- Role uptake within the ecosystem (e.g., Portfolio Governance or Industrial Oversight).
- Note: Approval typically occurs within 20 days via Positive Administrative Silence.

Phase 3

Industrial Immersion (Days 36–75)

- Activation of the Andalusia Pilot Deployment.
- Triggering of the 1:1 ENISA matching loan application.
- Supervision of the first R2W/ CiggyBuddy refinement batch.

Phase 4

Permanent Integration (Days 76–90)

- Issuance of the TIE (Foreigner Identity Card).
- Official residency as a tax-resident Co-Founder and Executive.

Overview of Equity Co-founders Expertise / Talent Allocation Frameworks within the LEADALEAP validated project modules

To reduce ambiguity for new equity contributors, the ecosystem is presented as a set of lanes. Each lane has a clear 'owner', budget bucket, KPI set, and capital use case. For each candidate, the question is not 'Can they join LEADALEAP?' but 'Which module best converts their expertise into measurable output?'

*Modularization or categorization is based on the genetic analysis of the approved business plan.
