[INFO] [13:45:38.489] [org.apache.catalina.core.ContainerBase.[jboss.web].[default-host].[/].[Faces Servlet]]
(http--127.0.0.1-8080-1) Closing javax.faces.application.ApplicationWrapper: com.sun.faces.config.ConfigureListener:145 -
close() was already called I've read some articles about Faces#destroy() method, but it doesn't help me. Does anybody know how
to destroy the bean? A: You cannot. Destroying a bean is the responsibility of the container that creates the bean. Not of the
container that is processing it. The whole point of an ELResolver is that you don't need to care about the lifecycle of the bean.
And of course, you don't need to care if it's removed. Q: How can I create this dark/light glass effect? I saw this website and I
want to make a similar effect to the dark and light glass effect that appears on the website. I am stuck on how to get the effect
of the dark and light glass and the way they blend together in the image. I am currently trying a simple glass class, but it is not
working as expected, I don't know why. In order to create an effect like that you could create a new material and edit it. Take a
look at the links below and try to understand how it works: I hope this helps you :) (i.e., the first line of the 520fdb1ae7
