083264 ID: 1ea5f7a0f9d26:blogger.com:0b:Comment:732938General The game is free to play, and players do not have to purchase anything. The player may also download content for free, such as skins, or to customize their player, such as changing the player's face. If the player wants to purchase content, they can use real money to purchase these items. There is a market that shows the player what kind of items are for sale and at what price. Most content can be downloaded as a DLC package, however, this DLC package can be purchased for a cheaper price. The player may participate in PVP games that are offered by the game. These PVP games range in skill level from casual to competitive, so the player can choose how much they want to engage in this aspect of the game. The player's PVP rankings are calculated using a number of items. This is done to give the player a fair chance at winning a PVP match. A skill tree is available to the player to help them improve their character's skills. The player may choose to invest more time into a skill, thus improving their overall level of skill. These skills are unlocked for the player as they progress through the game.Q: Dynamically find the highest value in the list I am reading some data from the harddisk and I have done some preprocessing on them and then stored them in a list. I want to know the highest value in the list and how many items are in the list. List list = GetAllData(); foreach (T item in list) { double result = (double)item; result = Math.Max(result); Console.WriteLine(result); } Console.WriteLine("Number of items: {0}", list.Count); This works fine but it uses an extra loop. Is there a way to make a one loop to find the highest value in the list? A: You can use Enumerable.MaxBy from System.Linq var result = list.MaxBy(x => x); If you want to find the greatest value among the elements of a sequence and order the resulting sequence (including the potentially empty sequence if the source sequence is 520fdb1ae7
