

"Learn how to think like Bohr, observe like the Dalai Lama and act like Richard Branson"

At UCLL they want students to be 'wicked proof'. Using the methodology of design thinking, they have identified key insights for this transformation towards "wicked proofness". In this workshop they will share their story and insights, applied to their own experience but also taking into consideration the bigger picture. They explain step by step why everything starts by replacing the worldview of Einstein by the one of Niels Bohr, why the compassion of the Dalai Lama is a key competence in the 21st century, and why we can learn a lot from the business perspective of Richard Branson.

You will work on your own wicked challenge. Suggestions, dialogue and co-creation are central elements.
