competitive logic of payments surplus of Britain did so a result of work. Complex nature of British
policy, the indies and indeed, the entire economic empire and return to the economy was abandoned. Indeed it had been the great scheme of all, and indeed, the entire economic empire and return to the economy. First things first, the British manufacturers and industrialists had their sights set on the West Indies, and they set about to make their mark. However, their ambitions were met with resistance, and the British faced a number of challenges. One of the main challenges was the West Indies' economy, which was heavily dependent on sugar production. This made it difficult for the British to impose their economic policies, as the West Indians were reluctant to abandon their traditional practices.

Another challenge was the British policy towards the West Indies. The British believed that they could control the West Indies through a combination of economic policies and military force. However, the West Indians were determined to maintain their independence, and they fought to resist British attempts to control their economy. This led to a number of conflicts, and the British were forced to withdraw their forces from the West Indies.

Despite these challenges, the British were able to achieve some success in the West Indies. They were able to establish a number of sugar plantations, and they were also able to establish a number of English settlements. However, these successes were not enough to sustain the British economic empire in the West Indies, and the British were forced to abandon their efforts in the region.
