hello !steam Valve have officially announced that they are developing Steam and are working with!ubuntu during their development, see for further details, see for install instructions, you can also join #ubuntu-steam for discussion. !amd ! B_S ok B_S as i see it, we're in two groups, admins and helpers I'm currently using ubuntu 16.04 and I'd like to install ubuntu on my other hard drive. But I can't get the installer to detect my other hard drive. it just says "No Hard Drive Detected". Help? I tried searching around and I can't find anything to help me figure this out. Giorfindel1: did you check in BIOS what the current boot priority is? anddam: yes, the other hard drive is listed there. Giorfindel1: what I'm asking is that if you already do have it running, did you check that the boot priority is what you want? Giorfindel1: of course you have it running just in case Giorfindel1 what other harddrive do you want to run ubuntu on? oh and Giorfindel1 it's even better that you don't need a bootable usb disk just do "sudo parted -l" and select the new disk to install on Giorfindel1: at the installer menu hit F6 to set a boot device Giorfindel1: use the option 'in your disk/disc' anddam: no, it's not bootable. It's not connected to the USB MonkeyDust: I have two hard drives. One is an SSD (starts at 0) and the other one is a normal hard drive (0). I'm trying to 520fdb1ae?
