## Shrek 2 mp4 google drive

Google Drive is an incredibly popular cloud storage service that allows you to store different files in the cloud and then access them from your smartphone, tablet or computer. It's pre-installed on most new Android phones, and you've already got an account if you've ever used Gmail. It's powerful and easy to use, but if you're new to cloud storage and have never used competitors like Dropbox or Box, it can be a little overwhelming. To help, we'll put together this beginner's guide on how to use Google Drive. Feel free to use jump links to jump to the most relevant part for you. If you don't already have it on your phone, also click on the download buttons below to download the app for Android or iOS.

**Download Drive for Android** What is Google Drive? How does it work? We're not getting too technical here, but Google Drive is Google's cloud storage solution. It allows you to store your media and documents on Google servers so you can free up space on your hard drive and access them from almost any device with an Internet connection. Before we delve into all the features and show you how to use Google Drive, let us talk about a few basic things you need to know. The first is that you need a Google Account to use the service. It is free and you can unsubscribe at any time. The account gives you access to all google services, including Drive, Gmail, Photos, YouTube, Play Store, etc. You can access Drive on the web by going [drive.google.com](http://drive.google.com) or via the free Android app. You can also view all your files through the Drive folder on your PC with Google Drive to your desktop, but you'll need to download the software first. Read next: [How to set up and use Google's new Backup and Sync tool](#) You can get the software by visiting the Drive's website. From here, click the gears options in the upper right, then Get Drive to the desktop. Follow the installation instructions and start the program and go through the configuration process, and you'll see a Google Drive icon on the Favorites tab on Windows. Google Drive pricing After it comes to storage, you'll get 15GB for free, which is shared between Drive, Gmail, and Photos. That's enough for most people, but you can add more for a monthly or annual subscription fee. This subscription is now called Google One, and offers additional benefits in addition to just more storage as discounts in the Google Store and additional users for families. We're just focusing on Google Drive pricing here, so let's take a look at the raw storage. A 100GB plan will set you back \$2 per month, 1TB goes for \$10 per month, while 10TB costs \$100 per month. Read also: [Google One vs competition: Dropbox, OneDrive, iCloud and more](#) Types of supported files Storage space is the main concern for most cloud storage solutions, file type restrictions can also be significant for many users. Fortunately, Google Drive supports a of file types, including .jpeg, .png, .gif, .mpeg4, .mov and .avi - see the full list here. File size limits are also in place, but they don't cause problems for most users: Documents: Up to 1.02 million characters. If you convert a text document to Google Docs format, it can be up to 50 MB. Spreadsheet: Up to two million cells for worksheets created in or converted to Google Sheets. Presentations: Up to 100 MB for presentations that are converted to Google Slides. All other files: Up to 5 TB. That's it for our primer on what Google Drive is a some basic thing you should know before you start. Now that we got it out of the way, let's take a look at how to use Google Drive. How to upload and download Google Drive files? To access your files on Google Drive, you must first upload them to the Web, PC, or mobile client. First, we talk about the web client, where there are two ways to transfer files to Drive. The first is the drag-and-drop method: Choose a file you want to transfer from your PC, drag it to Drive in a browser window and drop it. This works for both individual files as well as folders. The second option is to click the New button in the upper left corner of the website and either select File Upload or Folder Upload (picture above). Then select the files or folders you want to upload, click Open or Upload, and you're ready to go. An even easier way to upload to Google's cloud server is to take advantage of Google Desktop Drive. Simply drag the documents you want to upload and drop them in the Drive folder. It basically works the same as transferring files from one folder to another on your computer, although it may take a while for the files to sync. It's just as easy to transfer files from your mobile device. Open the Drive app, click the + icon in the lower-right corner, and select the file you want to send to the cloud. You can also quickly upload files by opening them, pressing the Share button, and then saving to drive. It's also quick and easy to download files from Google Drive on any device with an Internet connection. If you use Google Desktop Drive, anything you upload can be copied to another folder on your computer in the same way as any other file. You can also download files from the web client by right-clicking and clicking Download. This works for both individual files and entire folders. On mobile devices it may be more convenient to leave the files in the cloud and just open them when you need them, but there are some situations where you need to find the google drive download button. All you have to do is find your file in the app, tap the three dots to the right, then download, and you're ready to go. How to organize and delete files on Google Drive? You can organize the files in Drive the same way you would on your PC. You can leave them all in one place (drive) or put put in different folders. To create a folder in the Web client, click the New button, and then select Folder. You can also right-click the Drive folder on your computer and create a new folder, as you would normally do in Windows. On mobile, press the blue + button and select Folder, as shown in the screenshots below. To move files to a folder on the Web, simply use the drag-and-drop method for the Web client and the Drive folder. This also works on mobile, but in my experience it's faster if you tap the More Actions icon (three vertical dots) next to a file, select the Move option, and then select the new location for the file. How to delete Drive files? Because storage space is at a premium in the cloud, it's important to know how to delete Drive files to clean up the space. The easiest option on the Internet is to select a file or folder and press the delete key on the keyboard. This works for both the Web client and the Drive folder. To delete a drive document from your mobile device, tap the More Actions icon next to the file (three vertical dots) and choose Remove. How to share files on Google Drive? One of the best things about Drive is the ability to share files with others. These can be individual documents as well as folders. To share a Google Drive file or folder, select it and click the Download Share link icon, and then copy and share the link with the people you want. You can also click the Sharing Options option, where you can enable editing permission and send the link directly to someone else's email address. The process is the same for mobile devices. Tap the More Actions icon (three vertical dots) next to a file, and turn on the Link Sharing option. The link is automatically copied so you can paste it into a messaging app and send it to a friend. You can also tap Add People to send the link to an email address. How do you use Google Drive with third-party apps? Drives are connected to Google's office productivity suite, which includes Google Docs, Sheets, and Slides, which can compete with Microsoft's Word, Excel, and PowerPoint. Although these three services have their own dedicated website, all documents you create are automatically stored in Drive. Drive also supports other Google services like Google Forms, Google drawings, and more. You can create a document directly from drive's web interface or mobile app, which then takes you to Google Doc's dedicated website. How exactly? Click the blue new button in the upper-left corner of the site, and then choose Google Docs, Google Sheets, or Google Slides. On mobile, tap the blue + icon and select one of the three options mentioned in the previous sentence. Whichever option you choose, you can always access all created documents from your PC, mobile device the Disk folder on the computer. Google Drive also integrates with many third-party apps. third-party apps. includes: DocHub (signing PDFs), Pixlr Express (photo editor), Draw.io (charts), and many others. A third-party app that works with Google Drive is WhatsApp, where you can actually save your older messages to the cloud service. In even better news, WhatsApp made a change that lets people store messages on Google Drive without having them count towards their storage limits. You can check the full list using the web interface: Click the New button and select More, followed by Connect More Apps. When you see something you like, click the Connect button to integrate it with Drive. Using Gmail's Drive integration is one of the best and most useful integrations are between Gmail and Drive. In fact, unofficial support for using Gmail for storage precedes Google Drive as a service. Fans created a program called Gmail Drive, which allowed you to use Gmail as a storage medium. Of course when Google Drive and Drive to Desktop was released Gmail Drive was no longer necessary and is no longer in supported. Read also: [How to set up a Gmail account in less than 2 minutes](#) To share a Drive file with Gmail, start typing a message and click the Drive icon at the bottom of the screen. You can then navigate to the file and share it. Click the Attach icon (paper clip) at the top of the screen of your phone, and then click Insert from Drive. This is also an easy way to share large files that are shared as links instead of attachments. It's also easy to save Gmail files to run. Hover your mouse over the image or other media file, and click the Drive icon at the bottom right. On mobile, tap the picture for a long time, and then tap Show Picture. Tap the More Options icon (the three dots) in the upper-right corner, and then Save to Drive. It's worth noting that files on Gmail count toward the same storage limit as files on drives, so you don't really save space this way. However, you make them easier to search for in the Drive interface on the Web, mobile devices, and desktop clients. How to use Google Drive offline? Having your files online is great for accessing them from multiple devices, but it can also mean that you won't be able to view or edit them without an Internet connection. Fortunately, this is not the case with Google Drive. The service has an offline mode so you can access files while you are not connected to the Internet. You can view and edit files, including Google Docs, Sheets, and Slides, where all changes are automatically synchronized when an Internet connection is re-established. You must turn offline access on individually for each device. Open the settings menu on your computer and enable offline mode (pictured above). Also, be sure to download Google Doc's offline Chrome extension. Once this is done, visit drive's website to view or edit your files. But you need the Chrome browser for this to work. Of course, you you Also open files via the Drive folder on your computer, which will then open up in Chrome. Things are a bit different on mobile devices. You must open the Drive app, tap the More Actions icon (three vertical dots) next to a file, and then choose Available Offline. You can also press a long time on a file, and then select additional files and follow the same procedure to enable offline mode for multiple files at the same time. If you've made it this far, you should have a good idea of how to use Google Drive. The service offers a few more features, but the above are the most important. Them.
