The TopoEVN software is a powerful tool for post-processing topographic maps. It has an intuitive graphical user interface that makes data preparation and visualization easy. This utility can be used to perform the following operations on topographic maps: Select and highlight areas of interest. Cut areas, new paths, grid lines, and ellipses. Connect points, lines, and polygons in real time, and create plots, dendograms, and a wide variety of other diagrams. "I am really happy with your superb quality of work. You've saved me the trouble of drawing the shapefile myself." Dr. Claudio Esposito (ESC/Colombia) "I have been doing large-scale GIS projects for a long time and this is the first time I have used an English-language map publisher to produce my maps. I had to travel around Colombia to get samples of topographical maps for size comparison. I found GEOgraphia to be easy to work with, very fast, and very well done. I found their customer service to be second-to-none. "I had never considered doing any of the projects I was trying to do, due to the cost of mapping or the fact that I was hoping for something that would not be available in other languages. I found GEOgraphia to be the perfect choice. I was able to get my maps in within a couple of days of the project being posted to them, and the maps are well done. I found them to be well-written and have good customer service. Their maps are easy to use. I found that their pricing was very affordable. I have no reservations in recommending GEOgraphia to my colleagues." Dr. Valerie Morris (USGS-RSS) "We selected GEOgraphia because of their experience and track record in addressing the specific needs of cartographers in various fields. Their technical support was also very good. We especially appreciated their ability to work with multiple topographic maps within an integrated data set." Dr. Linda Horiochi "I've worked with GEOgraphia for many years, since they first started publishing topo maps in English. I've found them to be a reliable, professional, and affordable source for topographic maps, which have been used in a wide variety of GIS applications. Their technical support has been very good. I've 520fdb1ac7
