Transport processes and separation process principle

Comprehensive, unified, updated guidelines for transport and unbundling procedures. Today, chemical engineering experts need a thorough understanding of the momentum, heat and mass transfer processes, as well as the separation processes. Transport Processes and Separation Process Principles, Fourth Edition offers unified and up-to-date reading of all these topics. Thoroughly updated to reflect the latest methods and applications in this area, it covers both basic principles and practical applications. Part 1 covers essential principles based on transport processes: transmission of start-up; heat transfer in a state of unacceptable state; and mass transmission, including incompressible and convective mass transfer. Part 2 covers key separation processes, including evaporation, drying, moisturising, absorption, distillation, adsorption, ion exchange, extraction, estuary, crystallization, dialysis, gas membrane separation, reverse osmosis, filtration, ultrafiltration, microfiltration, alignment, centrifugal separation and more. Extensive updates and improvements to this release include: more thorough book coverage, Thermal, and mass transport processes Detailed new coverage application of umno separation process is a wide-ranging coverage of momentum transmission, including fluidized beds i non-newton fluid Detailed ories on mass transfer, absorption, distillation, extraction process and secession principles, i crystallization The fourth edition also has more than 240 suitable problems and more than 550 problems with homework that reflect current methods and field applications. Zajema mehaniko tekočine, prenos toplote in mase ter načela postopka ločevanja (vključno z operacijami enot). Na voljo so razširjeni odseki o prenosu zagona, prenosu mase, absorpciji, destilaciji in še kaj. Več.
