The product typeBeveragesOwnerJacobs Douwe EgbertsCountryFranceFranceIntroduced2004MarketsWorldwidePrevious ownersMondelēz InternationalWebsitewww.tassimo.com Tassimo Hot Beverage System is a consumer single serving coffee system that prepares one cup of espresso, regular coffee, tea, hot chocolate and various other coffee drinks, such as milk, such as milk, such as lattes or cappuccinos. However, in May 2020, a letter from product support company Gevalia.com, which is the source of Tassimo products in the United States, indicates that all of their products Tassimo Cappuccino, Latte and Milk Creamer have been discontinued. The brand is owned by Jacobs Douwe Egberts. The history of Tassimo was first introduced in France in 2004 and is now also available in Andorra, Austria, Canada, Czech Republic, Denmark, Greece, Germany, Ireland, Norway, Spain, Sweden, Switzerland, the Netherlands, Russia, Poland, Portugal, Romania, the United Kingdom and the United States. The machines were originally developed by Kraft Foods. The original machines were manufactured by Saeco and distributed by Braun. In early 2008, Procter and Gamble, Braun's parent company, began phasing out sales of Braun kitchen appliances in North America. In August 2008, it was announced that the new generation of Tassimo machines would be manufactured by Bosch. At the same time, Kraft announced a double-digit increase in tassimo T-Disc coffee sales for the second quarter in a row. T-Discs Tassimo T-Discs System Tassimo uses its own non-disposable plastic beverage pods, called T-discs, which are manufactured and distributed by Mondel'z. The barcode on top of each T-Disc instructs the machine to use the correct brewing settings. It will then change the temperature of the water, the amount of water, and the cooking time and strength. This allows the manufacturer of Tassimo pods to brew a variety of hot drinks: filtered coffee, cappuccino, short espresso, tea and hot chocolate. The brewing process takes 30 to 60 seconds. Discs containing milk use UHT milk, not powdered milk, but are no longer available in the United States. Tassimo T-Discs is currently available under brands owned by Mondel'z or Kraft Foods, including Gevalia, Maxwell House, Mastro Lorenzo, Nabob, Carte Noire, Jacobs, Suchard and Twinings. Not all brands are available in all markets (for example, Kraft Nabob T-Discs are only available in Canada, while Mondelz Kenco T-Discs are available in the British Isles). On Tassimo has partnered with the third third to market T-Discs from non-Kraft and non-Mondel'z brands. In the UK, T-Discs with the Costa Coffee brand have been sold since September 2012. In Canada, T-Discs are sold under the brands Second Cup, Tim Hortons, McCaf, as well as private supermarket brands such as Irresistibles, Our Finest and President's Choice. The current Tassimo machine offers five models of a single cup coffee maker compatible with home-use T-discs. However, the T46 and T65 are no longer available for sale in the United States. These are the T20, T46, T47, T55 and T65 models. While different in price, color, filter/display availability - they are functionally equivalent in that each manufacturer will produce the same drink from the same t-disc. Tassimo T12, T47 and T55 vehicles are sold in Canada. There is also a Tassimo Professional model designed for office and trading use. T DISCs designed for use in this model cannot be used in domestic Tassimo machines. Recall, on February 9, 2012, about 835,000 coffee makers were recalled in the U.S. and another 900,000 in Canada after reports that brewers sprayed hot liquid, coffee grounds or tea leaves on people. Reports from the Consumer Product Safety Commission say there have been 140 reports of the creator. 37 of those cases linked to second-degree burns. The commission also recalled 4 million T-discs over reports that they could burst during brewing. Customers who participate in the recall of the coffee maker are supplied with a replacement component that will help prevent the contents of the defective T-Disc from being sprayed if T-Disc bursts. The component comes free of charge, including instructions that allow customers to insert a new component on their own. External links derived from We have noticed more and more people visiting our site looking for information about Tassimo pods or T-discs and in particular we phase them out or if Tassimo goes out of business or stops. We found this intriguing and so thought we would submit the facts to help answer some of your questions. First, what does Google tell us? If you are looking for is tassimo gradually in Google, the results are not exactly useful. You will find links to the official website of Tassimo, Wikipedia, MyVirtualCoffeeHouse (this is us) and a lot of information that is depressingly outdated. The same goes for people looking for this tassimo goes out of business 2017. So why are people suddenly worried about it? This story originally occurred when the German city of Hamburg banned coffee pods and pods of machinery from public buildings, as part of a green initiative (see below for the full story). But there is more if you live in Canada! Tassimo CanadaMore recently users of Tassimo in Canada have found it harder to buy new Tassimo coffee machines, to the point where they are almost non-existent. This has led consumers to be concerned that Tassimo is emerging from the Canadian market. So what is really true, are Tassimo stopping their sale of coffee makers in Canada? According to the following tweet from Tassimo Canada, it would seem that they have stopped selling Tassimo machines in Canada.Hi KiloKirk, we regret that we stopped selling Tassimo brewers in Canada, there were not enough consumers buying them to support production. Thanks for the interest in Tassimo, good afternoon! - TASSIMO Canada (@TASSIMOCanada) February 25, 2019 So you have, Tassimo pulled the plug in Canada, after bad sales. Fortunately, they will still be strong everywhere. What is now for Canadian ConsumersTassimo is not the only one to serve coffee maker available to Canadian consumers, there is a huge amount of choice. We recommend you take a look at the below Nespresso machines, as they are excellent alternatives and very easy to use. The table cannot be displayed. From where Tassimo's time phased out of history came fromh of it all started in Hamburg, Germany. In an attempt to reduce waste and as part of a green drive purchase, the German city of Hamburg has banned coffee pods, and therefore coffee pod machines, from all government buildings. Why did Hamburg ban Tassimo pods? First, they not only targeted Tassimo, according to the Green Procurement Report, a ban on all equipment for hot drinks in which part of the packaging is used, and it goes to mention Kaffeekapselmaschine (coffee capsule machines), so ban on all coffee capsules machines, be it Tassimo, Nespresso, Dolce Gusto, Phillips, etc. Buildings, the good people of Hamburg and Germany are still able to buy coffee machine capsules and pods/t-discs from every supermarket and online store they like. And boy they like, apparently: 1 in 8 coffee sold in Germany from coffee capsule machine To review the best coffee capsule machine and find out what flavors are available, check out our free guide. Or, if you want to have a go at creating your own reusable tassimo pods, we have a great guide and video tutorial to help. Coffee capsules and their environmental impact Beauty coffee pods is that they are very fast and easy to use, have tons of flavors to taste and taste great. The problem with coffee pods is that they are not completely eco-friendly, and this is the crux of the issue that is the city of Hamburg. These portioned packages cause unnecessary resource consumption and waste generation, and often contain polluting aluminum - Hamburg, Green Procurement Report. Coffee capsules are a complex product, often from a mixture of different materials, and waste also contains organic waste (coffee, chocolate, tea, etc.), making them difficult to process in standard urban recycling plants. The capsules cannot be recycled easily because they are often made from a mixture of plastic and aluminum. We in Hamburg thought they couldn't be bought with taxpayers' money. - Jan Dube, Hamburg Department of Environment and EnergyIt's not just the Hamburg City Council who think it either. In a recent poll for Grocer, which is a British supermarket shopping magazine: 22% of those surveyed said they had coffee capsules machine10% thought that coffee pods are very bad for the environmentWhat is Tassimo, Nespresso et al do about it? Manufacturers know that in today's world, this is a problem, and are doing their best to support green initiatives. Nespresso commented on Hamburg's decision to remove its products from the city's public buildings, saying that this decision allowed them to highlight the growing recognition of the vital importance of being sustainable in everything we do. Nespresso has its own recycling program, which covers 31 countries and 14,000 capsule collection points. They currently have the ability to recycle over 80% of used capsules, and it aims to increase this to 100% by 2020.Likewise, Tassimo UK has teamed up with TerraCycle to help with a mountain of waste created from your used pods. You can find out more information on the Tassimo Uk website - or sign up with TerraCycle and start collecting empty pods today. Local UK councils are also trying to reduce the environmental impact that coffee pods create, with local schemes encouraging home owners to recycle. You can read more Warwick Warwick District council impact is it having on us? Will Tassimo, Nespresso and other coffee capsule makers go out of business? According to Senator Hamburg for the environment, they hope their initiative will have a knock on the effect of how people view coffee capsules. With purchasing power of several hundred million euros a year, the city can help ensure that environmentally harmful products are purchased less frequently - Jens KerstanBut considering how we are all recycling at home and in the office and recycling programs created and promoted by both Nespresso and Tassimo, coffee capsules are going nowhere, soon. In fact, according to Grocer magazine, the number of coffee pods sold last year rose by 1/3 compared to 2017, with more than 112 million pounds of coffee pods in total sold. Projected sales are expected to not only grow, but actually triple by 2020, meaning for the first time, coffee capsules will sell sachets! With all of this in mind, do we think that Tassimo pods and coffee capsules will gradually cease or be discontinued? Not a chance! Related contentSaveSave contentSaveSave
