

## e-Share At-a-Glance

### Short Description

- e-Share enables highly-secure external file sharing via Outlook, web browser, and Teams using OneDrive, SharePoint Online, Box, Dropbox or Google Drive for all file storage
- Provides fine-grained control over shared document, (e.g. watermarking), leveraging O365 AIP labels where available
- 100% branding of recipient experience to promote your brand, instill trust and prevent the recipient link blocking that can occur with your existing cloud file storage (e.g. OneDrive)
- Provides unique features to increase the scope and ease of external collaborations
  - dynamic virtual data room creation
  - on-demand sharing of files into your organization using your cloud file storage to receive them
  - recipient delegation of their rights to access a shared file

### Prerequisites

- OneDrive, SharePoint Online, Box, Dropbox or Google Drive (e-Share stores no files)
- Exchange Online, Exchange or G Mail (only if you want to secure email attachments)

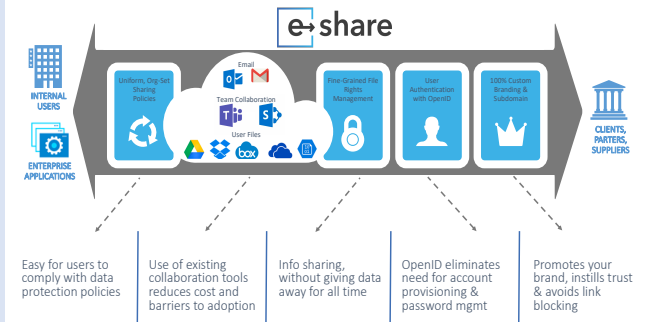

### Key Benefits

- Enables organizations to derive more value from O365
- Eliminates the cost and complexity of disparate file sharing tools (e.g. Box & SFTP servers)
- Bot for Teams and Add-in for Outlook allows file sharing using workflows and tools familiar to users
- Reduces data oversharing & associated risk
- Increases ability to share data securely, especially into organizations and countries that routinely block cloud file sharing services (e.g. Great Firewall of China)
- Requires nothing of recipient other than an email address and a browser...no pre-provisioning of account required
- Promotes & leverages your brand when engaging clients & partners (not e-Share...not Microsoft)

### Use Cases

- Ad-hoc external file sharing via email, browser, and Teams
- Secure Email, with an emphasis on protecting attachments
- Virtual Data Room for M&A, advisory partners, etc.
- File sharing into China & highly security conscious orgs
- App-driven secure document delivery (e.g. statements from SAP, pay slips from Oracle)
- File-based workflow automation (e.g. new client applications into Automation Anywhere; error logs into Salesforce)
