---

i can't install it i see in every games sections i click on install but it says no such file or directory i can't go any further  
kali\_eskrima: You are not in the correct directory then kali\_eskrima: when you run "sudo apt-get install glxgears" what is  
output? i see E: dpkg was interrupted, you must manually run 'sudo dpkg --configure -a' to correct the problem. kali\_eskrima:  
that's fine so how to fix it? kali\_eskrima: there is a "run in terminal" button near the arrow to the right, that should be used for  
"sudo dpkg --configure -a" kali\_eskrima: well the apt-get should be done with kali\_eskrima: also you could just install the  
package from the software center i dont remember but yes ok i click run in terminal kali\_eskrima: if you use a PPA for the  
package, there's a chance the repository information is lost in the mean time. To fix that, just comment out the line in  
/etc/apt/sources.list.d/anjuta.list kali\_eskrima: are you running unity? yes kali\_eskrima: run "gnome-control-center" from the  
dash and switch to "desktop" ok so i go back to the terminal and type that kali\_eskrima: well it looks like your PPA does not  
have 520fdb1ae7
