

CVE-2013-4267 (pydio)

Pydio Diagnostic Tool

Status : You have some warnings, but no fatal error detected, Pydio should run ok.
Please review the warnings.

[CONTINUE TO PYDIO INSTALLATION](#)

Security Breach	ERROR
It seems that your <code>data/</code> folder is not correctly protected, and that subfolders (like the <code>data/cache/</code> folder) are web-accessible. If you are using Apache , make sure the <code>AllowOverride All</code> option is active for your current directory. If you are running Windows IIS , you must manually add a <code>RequestFiltering/HiddenSegments</code> configuration to prevent web access to these folders. If you have defined a different <code>AJXP_DATA_PATH</code> pointing outside the webfolder, you can ignore this warning.	
PHP Command Line	WARNING
Php command line not detected (there seem to be some <code>safe_mode</code> or <code>a-like</code> restriction), this is NOT BLOCKING, but enabling it could allow to send some long tasks in background. If you do not have the ability to tweak your server, you can safely ignore this warning.	
PHP Session	WARNING
Warning, it seems that your temporary folder used to save session data is not set. If you are encountering troubles with logging and sessions, please check <code>session.save_path</code> in your <code>php.ini</code> . Otherwise you can ignore this.	
PHP Output Buffer disabled	WARNING
You should disable <code>php output_buffering</code> parameter for better performances with Pydio.	
Server charset encoding	WARNING
You must set a correct charset encoding in your locale definition in the form: <code>en_us.UTF-8</code> . Please refer to <code>setlocale</code> man page. If your detected locale is <code>C</code> , simply type <code>echo \$LANG</code> on your server command line to read the correct value. Detected locale: <code>C</code> (using <code>UTF-8</code>) Suggestion : Set the <code>AJXP_LOCALE</code> parameter to the correct value in the <code>conf/bootstrap_conf.php</code> file. You can also set this value using the installer form (next step).	
Client Browser	OK
Current client Mozilla/5.0 (Windows NT 10.0; Win64; x64) AppleWebKit/537.36 (KHTML, like Gecko) Chrome/58.0.3029.110 Safari/537.36
