JetAudio is a software component of Cowon media players and devices. It is available as a free media player for Windows under the name JetAudio Basic. It's anything but basic, though. JetAudio Basic is a stylish and capable player that can handle most file types, featuring audio and video converters, burning and tearing audio CDs, audio recording, skin, internet playback via JetCast, and other fun and useful JetToys. New to JetAudio 8 is an integrated GUI with optional media center interface. When we first run JetAudio, we have the Windows Settings option to choose from the Cowon Media Center folder in the Start menu. The front page asks how you want to use JetAudio, with the main window, toolbar, and combine the optimized media center for music, video, or file management. We chose the default options. The Media Center interface is more noticeable than a typical launch playlist player, closer to an Explorer app than a media tool (and a refreshing change from another media center we won't mention). JetAudio's top media player panel; It's a lookable unit, too, with a blue glass look and a spectral display. In default view, tree view does not scroll the Explorer sidebar but the media center features. But we can unlock my computer and portable devices from the controls next to the playback interface. Many users may opt out just to use the slim, optional toolbar, which autofits up or down the screen and can be dragged around the desktop. We run the configuration tool again and tried these and other interface options; Each is recommended something to it. JetAudio also scanned our system for media files when we first implemented it. Crisp displayed media center interface, on video playback, With flash videos saved from online. Of course, JetAudio really shines in playing and organizing your music collection, though audio and video quality largely depends on your audio and video cards and other variables. If we had a complaint, it is not that multiple controls are sometimes intuitive in the scheme or label. But JetAudio offers replacing the real media center with extra tone, and it belongs on its shortlist. 1/3JetAudio integrated multimedia software made of compact rack only. Not only does it play different music and video files, it also has features like burning CDs, recordings, and converting to other file formats. You can create your own internet player using JetCast, provided with JetAudio, and you can play all major file formats, including WAV, MP3Pro, OGG, WMA, MPEG, AVI, WMV, MIDI, Remote Control, and video and audio CD tracks.
